PREFACE.

The reader will observe, that, though the negotiations by which the war has been so happily terminated, were not entirely closed until the beginning of the present year, we have nevertheless brought all these transactions into the Register for 1762. We thought it more adviseable to delay our publication for some days, than leave incomplete an object, which appeared to us so extremely, interesting. Accordingly, the reader has before him, in this volume, every thing of moment relative to the last year's part of the war, except the taking of the Manilas, the account of which came very late.

We return our thanks to those gentlemen, who have been so obliging as to favour us with hints, towards rendering our work more complete. Of some we have been already in a condition to profit; of others we shall take advantage hereaster; some sew, though

PREFAGE.

though very judicious in themselves, could not be serviceable in the plan we had adopted.

The peace, which has contributed fo much to the happiness of Europe in general, has taken fomething from the entertainment of the curious and idle part of it. We are now deprived of those mighty events, of those aftonishing revolutions of fortune, of those matters of anxious hope and fear, which distinguished the late troubled and glorious period. We do not, however, despair, by the continuance of our former industry, and the continuance of the public indulgence to it, of furnishing, from the occasional political transactions of each succeeding year both foreign and domestic, something, which may not prove altogether unworthy of the reader's attention; and which may supply the loss of the military materials. West estarations thanks the taken guntum

Syl

V

HE close of the year 1761 to war, which had long lurked in other powers under the veil of a neutrality; and had only been kept down fometimes by irrefolution of temper in persons, and sometimes by want of system in politics. These ineffectual endeavours for peace produced also many occasions of quarrel and debate, that were absolute-

> To the north there was no appearance of relenting in any one of the powers engaged.

not to be expected, that the confederacy, which had held together fo long, and under fuch difficulties and disappointments, should now break to pieces, just at the moment when the states which composed it seemed in a condition to reap the mature fruits of their unanimity and perfe-The king of Pruffia was verance. not in a state either to allore or to intimidate. Great Britain could not increase his subsidy, nor reinforce his armies. The allied army in Westphalia played a defensive, and, on the whole of the campaign, a lofing game; and there was no body fo sanguine as to think that Great Britain could increase her Grenoth in Germany, where the paid already one hundred thousand men, and expended five millions annually.

Although nothing feems more certain in a general view of the political system, than that the king of Prussia is not the natural and necessary ally of this nation; yet his fortune neither was, since the beginning of the war, nor is it now, a matter of indifference to us.

The late Mr. Shippen was of opinion, that the power of France was become an object of much less terror fince the growth of the power of Russa. But he never imagined it possible, that all the great continental powers of Europe should ever be united with France; and that they should conspire to load her scale instead of balancing it. He never could foresee, what has actually happened in this war, that this very power of Russa could co-operate with France, and even with Sweden; and, what is full as extraordinary, that both these latter could co-operate with Austria to destroy in effect the lystem, which had been established by the treaty of Westphalia; that system, which

it had been the great drift of policy, and the great object of war to both France and Sweden in the last century to establish and to confirm, and to the house of Austria constantly to oppose. The destruction of the king of Prussia seemed to include the destruction of the treaty of Westphalia; because he is the only power in the empire capable of asserting the independency of its members, and supporting the declining credit of the Protestant cause.

The total ruin of Saxony, with fuch circumftances of unpardonable cruelty by that prince himself, and the exhausted state of all the other Protestant members of the empire. have narrowed that interest more and more to the fingle object of Pruffia. As this interest was first formed in the empire, fo its condition there cannot fail of having the most fensible influence on all the potentates of the fame communion. Even in this light, England had an interest that the king of Prussia should not be entirely croshed by the prevalence of a combination composed in so extraordinary a manner, that its fuecels must necessarily produce a total revolution in the fystem of Europe, and draw on a feries of confequences, which, though it is impossible to particularize, must have undoubtedly been of the most important and alarming nature. De Boud man vioistre

But there was an interest yet nearer to us, the fate of our own army in Germany, which could not furvive the destruction of the king of Prussia for an hour. These circumstances rendered the prospect of the campaign in Germany very gloomy; as there was no fort of ground to suppose that this prince, upon whose sate so many important

interests

interests immediately depended. could hold out to the middle of fummer. Befides, Denmark shewed no favourable dispositions towards us; and Holland discovered evident marks of coldness, if not of abso-Inte alienation, Such was the difposition of the powers in the

li-

The fouthern powers of Europe, whose total unconnection with the causes, and whose great remoteness from the feat of war might appear fufficient to ensure their tranquility, began to enter into action with a fpirit equal to that of any of the parties, who had from the beginning acted as principals; new fewel was heaped upon the fire of contention, which had wasted so many nations, just as it seemed to be on the point of expiring. francis

That alliance between the branches of the house of Bourbon, of which we have spoken last year, and which is so well known by the name of the Family Compact, is one of the most extraordinary transactions of this, or, perhaps, of any time. It has already produced some effects answerable to its design; it may produce others still more important; and on the whole must be confidered as an event of the most extensive, lasting, and alarming

influence. of

The treaty of Vienna in 1756, between France and Austria, has certainly contributed not a little to give that new turn to affairs, by which almost all the discourses, that have hitherto been written on the interests of princes, are rendered erroneous, and of little ule in future speculations. That treaty, however, tho' it feems entirely to have disjointed the ancient lystem of alliance by which France

a whole fate to many important

was formerly counterpoiled, may, possibly, not be so much a lasting change, as a temporary and excentric deviation from the sphere in which the house of Austria had formerly moved, and into which it feems so suitable to her natural and permanent interest to return. Bourbon compact is of a different nature; and it feems to have at length produced that entire union between the French and Spanish monarchies, which was fo much dreaded on the death of Charles II. and which it was the great purpole of the treaty of partition, and the war of the grand alliance to prevent. We have feen it take place in our days, comparatively with very little notice; so much greater is our present strength; or so much greater was the apprehension in those days, than the danger of the actual event in the prefent.

It was a bold push in France to attempt, and an uncommon fuccels to procure, towards the close of an unfortunate and difgraceful war, an France could alliance of this kind. not have expected from the most fortunate iffue of her affairs, an advantage so great as that which she derived from her becommon di-stresses. It is some time since the jealousy of her power has began to abate. But in fact her fecurity, and probably too her power, will be greatly increased by this very circumstance. Instead of forming such an object as alarmed mankind, and against which all Europe used to unite, she is herself become the center of an alliance, which extends from the northern to the fouthern extremity of Europe; and the was, in this war, actually united with Ruffia, Sweden, Austria, the empire, Spain, and Naples; to say nothing of Denmark,

mark, with which he had also some connections.

and With other nations, however, her ties are comparatively flight: but the engagements of the Bourbon compact form rather an act of incorporation than an alliance. It contains flipulations hitherto unheard of in any treaty. By the 23d and 24th articles, the fubjects of the feveral branches of the house of Bourbon are admitted to a mutual naturalization, and to a participation of fuch privileges and immunities, as if they were natural born subjects of the countries of their respective sovereigns. The direct trade to America forms the only exception to this comprehenfive community of interests. The tenor of this article is of infinite consequence to the general trading interest of Europe; all the states of which, by the acth article of the fame alliance, are excluded from any prospect of obtaining fimilar advantages due to the control of This forms a civil union in al-

most the ftrictest sense; the political union is even more perfect. By the ist and toth articles, the two monarche of France and Spain agree ato look upon every power as their enemy, which becomes an enemy of the other; that a war declared against either, shall be regarded as personal by the other; and that, when they happen to be both engaged in a war against the same enemy or enemies, they will wage it jointly with their whole forces; and that their military operations shall proceed by common confent, and with a perfect agreement.

By the 26th article, they agree their alliances and negotiations.

By the 17th and 18th, they for-

mally engage not to make, or even to liften, to any proposal of peace from their common enemies, but by mutual confent; being resolved, in time of peace as well as in time of war, each mutually to consider the interests of the allied crown as its own; to compensate their several losses and advantages, and to act as if the two monarchies formed only one and the same power. king of the Sicilies, and the infant duke of Parma are comprehended

in this treaty.

Here is the model of the most perfect confederacy. There is but one restriction to the extent of this scheme; but this particular restriction is a key to the whole treaty; as it shews, in the most satisfactory manner, against what object it was principally directed. For by the 8th article it is provided, that Spain shall not be bound to succour France, when she is engaged in a war in consequence of her engagements by the treaty of Westphalia, or other alliances with the princes and flates of Germany and the north, unless some maritime power take part in those wars, or France be attacked by land in her own country. This exception of the maritime powers indicates fufficiently that the tendency of this article is to affect England, and ferves to point out clearly, though obliquely, to the other powers of Europe, that their connection with England is the great circumstance which is to provoke the enmity of Spain.

It should seem that this treaty alone, when once its true nature came to be discovered, if no other cause existed, would have been sufficient to justify Great Britain in a declaration of war against a monarchy, which had united itself ! fo

intimate

to

intimate a manner with her enemy, that it was rend ered impossible to distinguish the one from the In this point, however, other. prudence was to interpole, and circumstances to direct. It was not, therefore, until every attempt to bring Spain to a clear declaration of pacific intentions had been tried without fuccess, in the manner we have already feen, that war was actually declared against her. This declaration was made, on our part, in London, the 2d of January of the

present year. Since Great Britain was a kingdom, she never was in such a doubtful and dangerous fituation; for at this time she was engaged, directly or indirectly, in a war, not only with all the great continental powers, but, what is more material, with the most considerable part of the maritime strength of Europe. According to the ordinary computations, the navy of Spain confifted of more than an hundred men of war; and though the French navy was greatly reduced, it became of confideration when added to the Spanish. Great efforts were made to render it respectable. communities in France engaged to fit out men of war at their own expence; and in general that whole people felt, after having been funk under a long despondency, a momentary glow of hope and animation from this alliance, so powerful in its real strength, and in its principles fo flattering to the national vanity. The glory of their royal house was, on this occasion, united with the fafety of their country. They were reinforced by the most cordial amity of a power untouched in its refources of men, money, and stores; whilst Great

Britain was exhausted of men by her many victories, and her refources were finking under a debt of more than one hundred millions.

Besides, a rude shock had been lately given to the fystem of the English ministry, which might be supposed, in some degree, likely The part to affect public credit. which Mr. P. might finally take, and the confequences which might refult from his actions, were extremely undetermined; nor was it at all clear, what degree of harmony and real confidence continued amongst the feveral parts of the subfifting administration. All these confiderations could not fail of infpiring France with great confidence.

Great Britain, under these circumstances, had, however, some things in her favour. The hope of plunder which always attends a-Spanish war, disposed the minds of many towards the present; and was fure to call forth a very vigorous exertion both of public and private strength. This circumstance also infured the supplies.

With regard to the administration, their delay in entering into this Spanish war, contrary to the ideas of Mr. P. his refignation in consequence of this delay; the neceffity, which fo foon after appeared, of engaging in hostilities, and which, to the bulk of the people, feemed to justify the fentiments of that minifter, together with a recollection of the fingular spirit with which the French war had been carried on, must necessarily have excited them to the most strenuous efforts, and to every act of laudable emulation. There was a necessity of flewing, that the fpirit of the nation, and the wildom of its coun-

thele circumstances UCH was our fituation, both slad lat home and abroad, at the are breaking out of this new war. To Something extraordinary was to be despected from the confederacy of of the house of Bourbon. It was not, beliowever, altegether certain where nothe form, that was gathering, would as fall of There were apprehensions for the peace of Italy; Holland had infome cause of dread; and menaces were used in that quarter. But Por-191 tugal feemed to be most endangered, on account of her close and barnatural connection with Great Britain, her internal weakness, the ancient claims of the catholic king, and the opportunity of invation; that kingdom being on all fides, resexcept to the fea, in a manner inenglosed by Spaine and T assorts

basing Public conjecture was not mif-

taken in fixing upon Portugal. No mention was made, indeed, of the Spanish pretentions to that crown; but a resolution was taken not only to oblige her to renounce all friendship, but to violate her neutrality with Great Britain.

No attempt was ever defigned with less appearance of justice; no proposition was ever made with more arrogance and despotism to an independent fovereign; and no scheme seemed, according to every human appearance, so certain of fuccefs.

The kingdom of Portugal, on the recovery of her liberty, which happened in the year 1640, found herfelf stripped of the greatest part of those acquifitions, in both Indies, which had been the principal fources of her power, and the great monu-

on

bar

ments of the capacity of her former kings and commanders. During the interval of her fubjection, new commercial powers had rifen, some on the ruins of her fortune, and others upon different but notles substantial foundations. Though the Brazils were recovered, and Goa and some other places in India remained still to Portugal, her maritime power, and the snare of trade, on which it depended, were not recoverable. Contrary to the fate of other nations, who have shaken off a foreign dominion, the did not owe her liberty to great abilities. Whilft the United Provinces were first freed, and afterwards aggrandized, by the capacity of the princes of Orange, and whilft Prussia, from an inconsiderable and dependent principality, grew into a formidable monarchy by the genius of her fovereigns, Portugal continued to languish in a state of mediocrity. Without any fymptoms of danger to her existence, the fuffered a gradual decay of her power and confideration. The character of her government was narrow and bigoted, and the whole lystem of her commerce preposterous. If, on the one hand, a long peace added to the refources of her revenue, it, on the other, absolutely annihilated her military; and no country in the world had an army fo incomplete in numbers, fo ill furnished with arms, so deficient in discipline, and so wholly unprovided of able and experienced officers.

In this condition she suffered a fatal blow from the earthquake in 1756. The wealthy and slourishing city of Lisbon was laid level with the ground; near thirty thousand of the inhabitants were buried in the ruins; and those who remained, with the court itself, were

reduced to the utmost distress and

As if this earthquake, which overturned their capital, had also shaken and distracted the frame of their government, and the temper of their minds, the most dreadful distempers broke out in the state. A feries of horrid crimes, and of cruel punishments, succeeded to this The most noble and calamity. wealthy family of Portugal, having engaged itself in a facrilegious attempt on the life of their fovereign, was cut off at once, with little diftinction of fex or age, by a bloody and dreadful exertion of justice. Many others, who were accused or fuspected, suffered death, or exile, or imprisonment. Amongst these, and from the same causes, one of the most considerable religious orders for wealth, influence, and policy, was stripped of its possessions, and intirely driven out country.

All these circumstances left this unhappy kingdom in the utmost weakness and confusion. All those, and they were not a few, who were attached by connection of blood or interest to the nobles that had suffered, or by religious prejudice to the Jesuits who had been expelled, could never be cordially relied upon by the crown, and were probably as little inclined to any extraordinary efforts in favour of a government, which their resentments must have represented to them as no better than a bloody tyranny.

The Bourbon confederacy had fome ground to suppose that Portugal, in this situation, would not have courage to withstand their menaces, and much less ability for any long time to resist their efforts. The Spanish army over-

[B] 4 Sunseines silde Tpread

pread the frontiers of Portugal; the commerce of corn between the two kingdoms was prohibited, and every thing threatened a sudden in6th Mar. Vasion. In the midst of these hostile preparations, the French and Spanish ministers presented a joint memorial to the court of Lisbo n which was followed by several others. The purport of these memorials was so persuade his most faithful majesty to enter into the alliance, and co-operate in the measures of the two crowns, against Great Britain.

It was not easy to find very convincing arguments to induce Portugal to adopt fo extraordinary a change of fystem. The united crowns, in a memorial which was figned by the ambaffadors of both, infilled largely on the tyranny which Great Britain exerted upon all powers, especially the maritime, and upon Portugal among the reft; on the particular infult which had been offered to her jurisdiction, by Boscawen's attack on de la Clue's squadron in a Portuguese harbour; on that affinity, by which the two monarchs of Spain and Portugal are as chosely connected by the ties of blood, as all powers are by a common interest, to oppose the ambitions defigns of the English.

Whatever these arguments were descient in reason, was made up by a strong infinuation of force. The memorial concluded with a declaration, that, as soon as his most faithful majesty had taken his resolution, which they doubted not would prove favourable, their army was ready to enter Portugal, and to garrison the principal ports of that kingdom, in order to prevent the dangers to which they might be ex-

ways dermed inhocent. He das

posed from the attempts of the English.

The two ministers added to this extraordinary memorial, that they were ordered by their courts to demand a categorical answer in four days; and that any delay, beyond that time, should be considered as a negative.

The fituation of Portugal was at this time certainly worthy of compassion. If, contrary to her known interests, contrary to her ancient connections, and to the faith of treaties, the should engage in this offensive alliance, the must expect to fee her territories and her colonies exposed to the formidable navies of Eng-This however dangerous condescension was not to secure her. by her own act, she would have put herself, bound hand and foot, into the power of the Bourbon alliance; and having received foreign garrisons into all her places of firength, would have reduced herfelf to the condition of a province to Spain. On the other hand, if she adhered to her faith, and attempted to maintain her independency, an army of fixty thousand men was ready to enter her territories, which contained no place of real strength, and which had not twenty thousand troops, and those ill armed, and worse disciplined, to defend it.

In this emergency, the firmness of the king of Portugal was eminent, and such as must deliver his name to posterity with the most distinguished advantage. He resolved steadily to adhere to his ancient and natural alliance, and to brave all dangers and difficulties, that he might preserve his sidelity inviolable; following that generous maxim of king John of France,

that

that if good faith were to be banished from all other parts of the world, it ought to be found in the

breaft of fovereigns.

His answer to this infulting propofition was humble and moderate, but firm: he observed, that the ties, which equally united him to Great Britain and the two crowns, rendered him as proper a mediator to them all, as they made it improper for him to declare himfelf an enemy to any of them; that his alliance with England was ancient, and therefore could give no offence at this conjuncture; that it was purely defenfive, and therefore innocent in all its circumstances; that the late fufferings of Portugal disabled her (in case the were willing) from taking part in an offentive war, into the calamities of which, neither the love his faithful majesty bore to his inbjects as a father, nor the duty by which he was bound to them as a king, could fuffer him to plunge them. Finally, he reminded the catholic king of his pacific difpolitions, by which, on former occasions, he had yielded so much, to preferve peace between the two kingdoms.

This reasonable and moderate answer drew on replies, which more and more disclosed the true character and spirit of the Bourbon confederacy. They denied that the alliance with England was purely defensive, or intirely innocent; and for this unheard-of reason, that the defensive alliance is converted into an offensive one, from the situation of English squadron, said they, cannot keep the fea in all feafons, nor cutting off the French and Spanish

navigation, without the ports and the affiftance of Portugal; that thefe islanders could not infult all maritime Europe, if all the riches of Portugal did not pass into their hands; that therefore Portugal furnishes them with the means to make war; and their alliance with the court of Great Britain is offenfive.

Certainly, the fituation of a country was never before given as a reason, however it might have served as a fecret motive, for declaring war against it. Nor was it before heard, that the common advantages of trade, derived from a neutral nation; could be deemed an act of hollility. These were rather infults than arguments. And the whole proceedings of the united crowns was in the fame firain; they undertook to judge for Portugal of the pretended yoke which was imposed upon her by England, and which the could not berfelf difcover; to refent injuries for her, for which the had received and accepted fatisfaction; and, as if this had not been indignity fofficient, they infultingly inform the king of Portugal, that he ought to be glad of the necessity which they laid upon him to make use of bis reason, in order to take the road of his glory, and the common interest: This peceffity was the immediate march of their army to take possession of his dominions:

So extraordinary a treatment neither intimidated the king from the firmness of his resolution, nor provoked him to change from the moderation of his language. He. the Portuguese dominions, and from maintained, that the treaties of the nature of the English power: the league and commerce, which fubfifted between Portugal and Great Britain, are such as the law of God. cruize on the principal coasts for of nature, and of nations, have always deemed innocent. He intreat-

ed their most christian and catholic majesties to open their eyes to the crying injustice of pursuing against Portugal, the war kindled against Great Britain: he defired them to confider, that they were giving an example, which would produce the destruction of mankind; that there was an end of the public fafety, if neutral nations were to be attacked, because they have defensive treaties with the belligerent powers; that a maxim fo destructive would occafion defolation in all Europe, the when they were fo elevated by the moment a war was kindled between any two flates; that, therefore, if attained, even in forming it, that their troops should enter his domi- they thought themselves dispensed nions, he would, in defence of his from those decorums, and plausible neutrality, endeavour to repulse appearances, which the most ambithem with all his forces, and those tious princes commonly make use of his allies; and he concluded with of, in the execution of their most this magnanimous declaration, that ambitious defigns. If they had inin would affect bim lefs, though re- vaded Portugal without any declaraduced to the last extremity, of which tion at all, it might, perhaps, be conthe Great Judge is the fole arbiter, to dered as a piece of convenient inlet the last tile of his palace fall, and justice, which they lest the previous to fee bis faithful fubjects fpill the last necessity, and subsequent success of drop of their blood, than to facrifice, their affairs, to justify as they could; no tobester with the bonour of his crown, but so many memorials and reasonthat Portugal bolds most dear; ings on the subject, shew that this and to Submit, by Such extraordinary oppression was deliberate, and that means, to become an unbeard-of exam- they had not been driven to it by a ple to all pacific powers, who will sudden emergency, but that it beno longer be able to enjoy the benefit of came a regular and avowed part of neutrality, whenever a war shall be their political system. kindled between other powers, with Having laid open the manner in subject the former are connected by de- which the fouthern part of Europe fenfive treaties. Peace between Prussia and Sweden. Prussian conquests restored. The czar enters into an alliance with the king of Prussia. War with Denmark threatened. Its cause. torted loan from Hamburgh. Campaign between Prussians and Austrians opens. Prustians obtain advantages in Saxony and Silesia. Sudden revolution in Russia.

WE have feen, in the close of the last year, that, by the taking of Colberg, on one hand, and Schweidnitz, on the other, the king of Pruffia's dominions were intirely at the mercy of his enemies: his forces were worn away, and even his efforts had gradually declined: a complete victory, tho' this was an event not at all probable, could not fave him. The Russians, by wintering in Pomerania, and by the possession of Colberg, which infured them supplies by a safe and expeditious channel, were in a condition to commence their operations much earlier than usual, as well as to fustain them with more spirit and uniformity. No resource of policy could be tried with the least expectation of fuccess. After such a resistance for five years, of which the world never furnished another example, the king of Pruffia had nothing left but fuch a conduct as might close the scene with glory, fince there was fo little appearance of his concluding the war with fafety.

In the midst of these gloomy appearances, his inveterate and inflexible enemy, the empress of Ruffia, died, in the fixty-third year of her age, and the twenty-second of her reign.

This princess was second daugh-

ter to Peter the Great, and a descendant not altogether unworthy of that illustrious founder of the Rustian empire. From being little better than a prisoner, she became in a moment a despotic sovereign. At the accession of this princess, the Russian power, so newly created, seemed to be in danger of a decline, from the many revolutions to which the empire had been subject; and the institutions of Peter the Great, by which that extensive part of the world was drawn out of barbarism, began perceivably to decay, until her accession to the throne, when the former was put out of all queftion by the vigour of her government, and the latter cherished and promoted by the encouragement which she gave to every valuable art and science. The academy at Petersburgh is at present one of the most flourishing in Europe, and has already enriched the learned world with confiderable discoveries,

In fact, the governed the Ruffian empire with more lenity than any of her predecessors; and, perhaps, carried this amiable disposition to an impolitic excess. She regulated and increased her finances; kept alive, and even increased, the discipline of her armies; and in all her transactions with foreign states, and in

the various faces which her politics afflumed, the always supported the dignity and importance of her country at the highest point. For her private pleasures, indeed, she has been much censured; but as they were merely pleasures, and of such a nature that fentiment had little share in them, they had little influence on her public conduct, which was

always manly and firm.

The part the took in this war, have been dictated by resentment, was at the same time the result of the foundest policy. No power, but that of the king of Pruffia, was capable of checking hers. He was, not only from his firength and character, but from the fituation of his dominions, the only prince in Europe from whom it could be mate-Stally her interest to make conquests. By the retention of Prussia, and by the dominion which, in another name, the held over the dutchy of Contland, the polletted a very great mare of the Baltic coaft, and thereby possessed the means of becoming maritime power of the first order. With these advantages, she might eafily complete all that had been wanting, towards establishing an uncontroulable power over Poland. By the fame means the might intirely over-awe Donmark and Sweden ; and also, by her vicinity, she would be enabled to interpole in the concerns of Germany, with much more authority than the had hitherto poffeffed; although her intervention had always been of confequence.

In reality, the house of Austria seemed to make far greater facrifices of her interest to her resentment than Russia did, with whom those two principles went hand in hand, and supported each other. For no-

thing is more evident, than that Ruffig would fet up for a defender of the liberties of Germany, if ever fhe got any footing in its neighbourhood; that the would animate the powers there to affert a greater degree of independence than they do at prefent; that the would render, by her machinations, the empire in the Austrian family very precarious; and might even find means of fetting some feeble prince on the imperial throne, in order to embroil the whole Germanic body, and to keep it in intire dependence upon Ruffia. On the whole, if the projects of Austria had succeeded in their full extent, the would have very foon found in Ruffia a more powerful reftraint, than ever the had either in France or Sweden, even in the greatest heights of their power and credit in Germany. She would, indeed, have ruined the king of Proffia; but the would have purchased his ruin with her own independency.

These were the prospects that lay before all political reasoners at the time of the death of the empress Elizabeth. Charles Peter Ulric, of the house of Holstein, who had been created grand duke of Ruffia, and appointed heir apparent to that valt empire by the late czarina, fucceeded, under the name of Peter III. None but those who were intimately acquainted with the character and disposition of the new czar, could have any reason to imagine that he would abandon the fystem of his predecessor, which was certainly founded on the true interefts of the country he governed. The king of Pruffia himself feemed for some time to have entertained no great hopes from this change. The czar had, however, fometimes

1.12

discovered marks of esteem for the character of this monarch. He had the black eagle, of which order the king of Pruffia is grand mafter. But the king of Pruffia could place very little confidence in this : however, with that air of pleafantry, which never entirely forfook him in all his misfortunes, he faid in a letter to Mr. Mitchel, the British minister at the Russian court, " Is not this a very extraordinary knight, to feed 80,000 men at my expence? He is the only one of my knights that takes that liberty. If every knight of the garter did the fame, your England (England though it is) would be devoured by them. beg you would endeavour to make my knight more tractable, and tell him it is against the institutes of the order, for a knight to eat up his grand mafter."

The eyes of all Europe were now fixed upon the steps which the czar might take. With regard to the government of his country, nothing could be more popular and auspicious than his first measures. The earliest ofe he made of his abfolute power, was, to fet the Ruffian nobility and gentry free, and to put them on the same footing with those of their rank in the other more moderate governments of Europe. Almost all the exiles were recalled to court, and amongst the rest the unfortunate count Biron, who, from a fovereign prince, had been reduced to the most wretched condition, in the most wretched He had country on the globe. been many years a peafant of Siberia, and may very probably once more become a fovereign prince. It is in those despotic governments we see the most striking excesses, and dismal reverses of fortune; in

which one day a person is raised to something almost above man, and the next is perhaps in a moment degraded to the lowest station of humanity.

The new emperor proceeded in his reformation to abolish some severe and tyrannical jurisdictions, and intending the same benign disposition to all degrees of his subjects, he lefsent the tax upon falt, to the very

great and univerfal relief of the poor. These beginnings gave the most favourable impressions of his domeftic government. But Europe was principally concerned in his foreign politics. It was not long before his dispositions to peace be came apparent. What aftonished the world, was the high rate at which he valued this bleffing. In a memorial, which he caused to be delivered on the 23d of February, to the ministers of the allied courts, he declared, that, in order to the establishment of peace, be was ready to facrifice all the conquests made by the arms of Ruffia in this war in bopes that the allied courts will on their parts equally prefer the restoration of peace and tranquility, to the advantages rabich they might expect from the continuance of the war, but which they cannot obtain but by a continuance of the effusion of human blood.

The allies praised the difinterestedness, spirit, and humanity of this declaration; but recommended to his attention the fidelity to treaties, which constitutes a no less valuable part of the royal character, and a no less considerable branch of the duty of a monarch to his subjects. They shewed a disposition to imitate his desire for peace, but by no means to follow his example in purchasing it by a cession of all the advantages, which they had ac. In order to account for whatever

character little fitted to wait the flow procedure of a joint negotiation, gave way to his ardent defires for peace, and to the fentiments of that extravagant admiration, which he had conceived for the king of Pruffia. A suspension of hostilities was concluded between them on the 16th of March; and it was followed May 5. not long after by a treaty Nothing was stipulated by the czar in favour of his former confederates, whom he entirely abandoned. He even agreed to join his troops to those of the king of Prusfia to act against them. In a little time a Ruffian army was feen in conjunction with one of Prussia, to drive out of Silefia those Austrians, who had been a few months before brought into that province by the

This was a miraculous revolution, Fortune, who had so long abandoned the king of Prussia to his genius, after having perfecuted him for near five years, and overpowered him with the whole weight of her anger, at length made amends by a fodden turn, and did for him at one stroke the only thing, by which he could poffibly be faved of vel sho

Sweden, who fince the has recovered her liberty has loft her political importance, and for a long time acted entirely under the direction of Ruffian councils, followed on this, as on all other occasions, the example of the court of Peterf-

quired, or hoped to acquire by thewar, was not the refult of mere perfor The czar having thus far com- nal character in this extraordinary plied with decency, and being of a revolution of politics in Russia it will be necessary to remind the reader, that the czar Peter the third was duke of Holstein; and that the dukes of Holstein had pretensions to the dutchy of Slefwick. Thefe pretentions were compromised by a treaty in 1732. But as the ceffion made by the house of Holstein in this treaty was the effect of neceffity, it had been always apprehended that the would make use of the first fafe opportunity of reclaiming her ancient rights. The czar feifed eagerly on the great one, which the possession of the whole Rusian power afforded him, and he resolved to enter into an immediate war for this object, to which his predilection for his native country gave in his eyes a far greater importance than to all the conquests of his predecessor. As long as this war with the king of Prussia-fubfifted, it was impossible that his defigns against Denmark could be profecuted with any hope of fuccess. Wholly indifferent therefore to all others, and passionately fond of this object, as foon as he came to the throne, without any dispute of or negotiation, he offered the king of Prussia in his great distress every thing he could have hoped from a feries of victories, and whilf he joined his arms to those of that monarch in Silefia, he caused an army to march towards Holftein.

The king of Denmark, though threatened by so formidable a power engaged in pursuit of a favourite object, was not terrified into any He recruited mean concessions. his army, repaired his fortifications, and prepared for his defence, with temper and magnanimity. As money must be much wanting for the fervices of fo important a war, as his country could furnish no great supplies, and the borrowings in every part of Europe, together with the sudden invasion of his dominions, could enable him to form no fanguine hopes of public credit, he turned his eyes towards the city of Hamburgh, which had enriched itfelf by its industry and neutrality during the whole war, and by the number of wealthy persons who had led there for refuge from the caamities, which all the neighbouring countries had fuffered.

His Danish majesty had always kept alive a claim of fovereignty over that city, which (however founded) he exercised whenever he found himself able. He thought the prefent one of those conjunctures. Therefore without any previous notice he appears with a ftrong army before Hamburgh, June 18. feizes the fuburbs, threatens the city with an immediate fiege, if they did not immediately fubmit to a loan of 1000,000 of rixdollars. The magistrates of this trading city, little prepared for, or accustomed to war, having no ally at mitted, and furnished the king with to the very heart of Bohemia." dgud

revolution in his favour. The neutrality of the Ruffians still left the Austrians much superior to him. Their alliance brought him to an equality. Two Austrian armies in Silefia, and one in Saxony, were prepared to act, and it was not clear which fide would begin to act on the offenfive: the Austrian armies threatened Glogau and Breslaw with a fiege, and the king of Pruffia's threatened Schweidnitz.

The active character of the king of Prussia, and the caution of marshal Daun, soon determined the part, which the several armies were to take, and the spirit of the several operations. Very early in May 12. the campaign prince Hen-

ry made a vigorous puth on the imperial pofts towards the frontiers of The Imperialifts were Saxony. obliged to evacuate Dippolfwalda with fome loss in killed. About four thousand men were taken prisoners; 365 waggons were also taken, and

feveral military trophies.

By this fignal advantage, all the part of Saxony, possessed by the Prustians, was effectually secured; and any attempt which might hereafter be thought proper for the recovery of Dreiden, was much facilitated. Although the Auftrians, fenfible of the confequence of this lofs, and largely reinforced 101 from the armies in Silefia, attempted to recover these posts by several lively efforts, they were repulsed with no small flaughter on both fides; and prince Henry remained so much mafter of Saxony, that it hand, and who would be equally en- was necessary to keep a large army dangered by the frength of any ally from the war in Silefia, to prevent able to protect them, prudently sub- if possible his making irruptions in-

CHAP. IV.

Causes of the revolution in Russia. Czar irritates the clergy and soldiery.

Differences with the czarina. Conspiracy against him. Czar deposed by
the senate. Attempts an escape. His imprisonment and death. The czarina declared empress. Her politic conduct. Ingratiates herself with
the people.

FROM the moment of the late czar's accession to the throne of the Russias, something extraordinary was expected. His dispofition feemed to lead him to make alterations in every thing, and having fet before himfelf two great examples, that of the king of Pruffia and of his predecessor Peter I. it was expected that this vast empire was going once more, almost within the life of a man, to assume a new face; a circumstance which could not fail of having a ferious influence on the affairs of Europe. Peter III. made more new regulations in Russia in a few weeks, than wife and cautious princes undertake in a long reign. It was to be fearin a long reign. ed that his actions were rather guided by a rash and irregular turn of mind, and the spirit of innovation, than by any regular and well digested plan, for the improvement of his extensive dominions.

HAP

His first actions on coming to the throne, it is true, were laudable, and seemed well calculated to acquire him the affections of his people. But if in some instances he consulted their interests, in many he shocked their prejudices; and he lost thereby that opinion, which is on all occasions necessary, but is particularly so for carrying such uncommon designs as his into execution.

The power of the czars, though absolute and uncontroulable in its Vol. V.

exercise, is extremely weak in its foundation. There is not perhaps in Europe a government, which depends so much on the good will and affection of those that are governed; and which requires a greater degree of vigilance and a steadier hand. The regular succession which has been so often broken, and the great change of manners, which in less than a century has been introduced, have lest in Russia a weakness amidst all the appearance of strength, and a great facility to sudden and dangerous revolutions.

Peter III. paid little attention to those difficulties, which to him were the greater, as he was a foreigner born. They were augmented by the Superior and invidious regard he feemed to pay to foreign intereffs, and foreign persons. The preserence he so manifestly gave to the uncertain hope of inconfiderable conquest in Holstein over the solid and valuable possessions which the fortune of his predecessor had left him, must have disgusted all the politicians of his country. His intimate connection with, and boundless admiration of that prince, with whom Russia had been so lately, and so long, in a state of the most violent hostility, could not add to the opinion of his prudence. They did not think he fufficiently consulted his dignity, in solliciting [C]

with great anxiety a command in the Prussian service. When he received it, he dressed himself in the Prussian uniform, made a grand sestival, and displayed all the marks of an immoderate and puerile satisfaction. He pushed his extravagance in this point so far, that he made preparations in this immature state of his government to quit Russia, and to go into Germany for the sake of an interview with that great monarch, whose genius, principles and fortune he so greatly admired.

Although this proceeding was, almost in every respect, extremely impolitic, it did not threaten fo dangerous consequences as the other steps, which he took about the same time. Nothing requires fo much judgment, and so nice a hand, as to effect a change in the fettled eftablishments of any country. Above all, there must be something favourable in the conjuncture; or fomething fo uncommon and over-ruling in the genius of the conductor of those changes, as will render him fuperior to all difficulties. This latter was the case of Peter I. who had indeed very little favourable in the conjuncture; but he did every thing by his capacity, courage, and perseverance. The foldiery and the ecclefiaftics are the great supports of all absolute rule, and they are certainly the last bodies, upon which a prince of this kind would chuse to exert any invidious act of authority. But the czar was indifcreet enough, very early in his reign, highly to provoke both these bodies; foldiery, by the manifest preference he gave to his Holstein guards, and to all officers of that nation; and by the change he made in favour of the Prussian uniform to the exclusion of that, in which the Russians believed

they had so often afferted the honour of their country, and gained many fignal advantages over the troops, distinguished by those regimentals which were now preferred.

These trifles had very important consequences. But what he did in matters of religion was still more dangerous. This prince had been educated a Lutheran; and though he conformed to the Greek church, in order to qualify himself for the fuccession, he never shewed much respect to that mode of religion, to the rites and doctrines of which his subjects had been always extremely attached. He seized upon the re-venues of the clergy, whether monks or feculars, whether bishops or inferiors, and for compensation allowed them fome mean penfions, in fuch a proportion as his fancy fuggested. His capricious order that the clergy should no longer diffinguished by beards, was in itself of less moment, but it was hardly less offensive. He made also some regulations concerning the images and pictures in their churches, which gave them reason to apprehend his intention of accomplishing a total change in the religion of the empire, and introducing Lutheranism.

Whilst he was taking these meafures to alienate the minds of his people in general, and especially of those bodies, with whom it was the most his interest to be well, he had not the good fortune to live in union with his own family. He had long slighted his consort, a princess of the house of Anhalt Zerbst, a woman of a masculine understanding, and by whose councils he might have profited. He lived in a very public manner with the countess of Woronzoss, niece to the

chancellor of that name, and feemed devoted to her with fo ftrong a paffion, that it was apprehended he had some thoughts of throwing his empress into a monastery, and raising this lady to the throne of all the Ruffias. What seemed to confirm this opinion, was his omitting formally to declare his fon the grand duke Paul Petrowitz the successor. This omission in a country, where the fuccession is established and regular, would have been of no confequence; the punctual observance of fuch a ceremony would rather have betrayed some doubt of the title. But the nature of this government, as well as positive constitutions, had made it necessary in Russia, and the omission was certainly alarming.

He

That unfortunate prince, having in this manner affronted his army, irritated his clergy, offended his nobility, and alienated his own family, without having left himfelf any firm ground of authority, in perfonal esteem or national prejudice, proceeded with his usual precipitation to new changes. In the mean time a most dangerous conspiracy was forming against him. The cruel punishments inflicted in Rusfia on state criminals, have only an effect to harden the minds of men already fierce and obdurate, and feldom deter them from the most desperate undertakings. Rosamouiki, Hetman or chief of the Coffacks, a person of importance by that command, Panin governor of the great duke Paul, marshal Butterlin, the chamberlain Teplow, the attorney general Glebow, baron Orlow major of the guards, and many others of the great officers and first nobility of the Empire, engaged in a conspiracy to dethrone the czar, who was now univerfally hated; and, what was more fatal to him, univerfally despised.

They affured themselves that their action could not be difagreeable to the empres; whose conduct had always been the very reverse of that of her consort. princess finding that the affections of her husband were irrecoverably alienated, endeavoured to fet up a separate and independent interest in her own favour, and for afferting the rights of her fon. She therefore affiduoufly cultivated the affections of the Russian nation, and paid a respect to their manners and religion, in the fame degree that her husband feemed to coptemn them.

So ill was the czar served, that this conspiracy was grown general, without his receiving the least notice of it, and he remained in perfect fecurity, whilft the fenate and the clergy were affembled to June 28. pass the sentence of his deposition. At this time the empress and he were both absent from the capital at different country feats. The empress, as foon as the found that the defign was declared, got, on horfe-back, and with all possible speed arrived at Petersburg. She immediately harangued the guards, who chearfully and unanimously declared in her favour, and proclaimed her empress of Russia independently of her husband. She then addressed herself to the clergy, and the chief of the nobility, who applauded her refolution; and all orders immediately took the oath of allegiance to her as fole empress. She was no sooner acknowledged in this manner, than, without lofing a moment's time, the marched from Petersburg towards the emperor at the head of a body of troops.

This prince was indulging himfelf in indolent amusements, and [C] 2 luiled

ulled in the most profound fecurity at a house of pleasure, called Oraniebaum on the sea shore, when a soldier brought him an account that his kingdom was taken away from him.

Aftonished, and wholly unprepared for this event, he was some time fenseless, and entirely at a loss what part to take. When he was rouzed from this trance by the approaching danger, his first suggestion was to defend the place with his Holstein guards; but tho' satisfied of their attachment, he doubted their strength, and he knew it was in vain to hope for any effort in his favour from the Russians.

Nothing then remained but flight, by which he might escape to Holstein, and wait some favourable turn of fortune. This late lord of powerful fleets and armies embarked in a small vessel, and with a few attendants, and rowed towards Cronfladt; but he had not proceeded very far, when he was informed that this fortress was in the hands of his enemies, and that every avenue for escape was shut against him. Dejected and desponding he returned to Oraniebaum. After some short and tumultuous deliberation, he resolved to abandon all thoughts of defence, and to throw himself on the compassion of the empress.

On her march she met his meffengers, who brought letters containing a renunciation of the empire, and stipulating no other terms than leave to return to Holstein, and the fatisfaction of taking with him, as the companion of his retreat, the countess of Woronzoff and

one fingle friend. Reasons of state could not permit

those terms, and the last could not be very flatterring to her. His terms were rejected; and he was required to fign an unconditional refignation of his crown, according to a form that was prepared for him. Not fatisfied with depriving him of his crown, it was thought fit to make him the murderer of his own reputation; and this unfortunate prince, moved with the vain hope of life, figned a paper declaring his conviction of his inability to govern the empire, either as a fovereign, or in any other capacity, and his fense of the distress, in which his continuing at the head of affairs would inevitably involve it. After he had figued this abdication, he gave up his fword, and was conducted to prison, where in a short time, but according to what had been univerfally expected, he died. The diforder, which killed him, was called an hemorrhoidal cholic.

Thus was a revolution of fuch immense importance effected in a fingle day, and without shedding a fingle drop of blood. unfortunate emperor enjoyed the power, of which he had made fo imprudent and unpolitic an ufe, no longer than fix months. His wife, without any hereditary title, is fovereign mistress of the Russian empire; and the most absolute power on earth, is now held by an elective monarch.

Immediately on this revolution a number of manifestoes appeared, in which the conduct of the late czar was feverely condemned, the weakness of his personal character exposed, and designs of the blackest kind, even that of murdering his confort, attributed to him. Those the empress to consent to the first of manifestoes at the same time were

Nothing could be more able than the conduct of the empress, fince her accession to the throne. In almost all respects it was the very reverse of that of her husband. She. difmiffed all foreigners from her confidence and fervice; she fent away the Holstein guards, and chose Russian, whose ancient uniform was revived with new luftre, the empress herself frequently condescending to appear in it. The clergy were reflored to their possessions, and their beards. She conferred all the great posts of the empire on native Russians, and entirely threw herself on the affections of that people to whom she owed her elevation.

CHAP. V.

Effect of the revolution in Russia on the king of Prussia's affairs. Situation of the new empress. She adopts a neutrality. Russian conquests restored. Russians quit the Prussian camp King of Prussia draws marshal Daun from Buckersdorff. Schweidnitz besieged. Marshal Laudohn attacks the prince of Bewern. Is repulsed. Disposition of the French and allied armies. Broglio remowed. Battle of Grabenstein. French defeated. Lord Granby driwes the French from Hombourg. Prince Xavier of Saxony defeated. Gottingen evacuated. French army called from the Lower Rhine.

THIS great change in the government of Rossia, it was univerfally feared, would be followed by a total change of fystem with regard to foreign affairs. The peace and alliance with the king of Prussia were very unpopular measures in Muscovy. It was not probable that the close and intimate connection which had sublisted between the king of Prussia and the late czar, could greatly recommend him to the successor. And as it was imagined that this revolution must have been in a great degree owing to the machinations of those courts, whom the czar had irritated by withdrawing from their alliance, there was the greater reason to apprehend that the power, which was now fet up, would be exerted in their favour.

There were also great advantages on the side of Russia, if the empress should not hold the peace concluded by her late husband to be binding on her, as none of the conquests were at this time evacuated. Every thing seemed to conspire towards plunging the king of Prussia into the abyss of his former distresses, after he had emerged from them, only for such a time, and in such a manner, as to make them more bitter and insupportable.

Fortunately, however, for this wonderful man, the empress, who had come to the Russian throne in the extraordinary manner that we have seen, could not look upon herself as sufficiently secure to undertake again a war of so much importance as that which had been

[C] 3 juk

inft concluded. It was necessary, for fome time at least, that she should confine her attention folely to her own fafety. Therefore it was expedient to collect, within itself, all the force of the empire, in order to oppose it to the defigns of the many malcontents, with which that empire always abounds, and who, though not attached to the interest of the late czar, and little inclined to revenge his fate, would find now both inducement and opportunity for raising troubles and attempting new changes. Very plaufible pretences for fuch attempts existed from the time of Peter the Great; who, whilft he improved and strengthened his kingdom, left in it, at the same time, the seeds of civil wars and revolutions.

These considerations, whatever her desires might be, induced the exarina to continue so much of the system of her predecessor, as coincided with her situation. She therefore declared to the king of Prussia's ministers, "that she was resolved to observe inviolably, in all points, the perpetual peace concluded under the preceding reign, that nevertheless she had thought proper to bring back to Russia, by the nearest roads, all her troops in Silesia, Prussia, and Pomerania."

It was not the critical fituation alone of the czarina which produced this moderation; the prudent behaviour of his Prussian majesty, during the time of his connection with the late czar, had a considerable share in reconciling the mind of this empress to him, and of perpetuating something like the same friendship, with interests so very different. The Russian senate, slaming with resentment against this monarch, and against their late soverign; and the empress, full of

suspicion that the conduct of the latter might have been influenced by the councils of the former, fearched eagerly amongst the papers of the late emperor for elucidation or proofs of this point. They found indeed many letters from the king of Prussia; but in a strain abfolutely different from what they apprehended. The king of Pruffia had, as far as prudence would admit, kept a referve and distance in regard to the rash advances of this unhappy ally. Too experienced to be carried away by his inconfiderate impetuofity, be gave him much falutary, though fruitless, advice; he counselled him to undertake nothing against the empress his confort; to defift from the war with Denmark; to attempt no changes in the religion and fundamental laws of the country; and not to think of coming into Germany.

On hearing these letters read, the empress is said to have burst into tears of gratitude, and made in consequence the strongest declarations in favour of this prince. They were not without effect. Orders had been given with relation to Pruffia, which threatened a renewal of hostilities. They were foon suspended. The army of the Russians was indeed separated from that of Prussia; but all the important places, which the Russians had, with so much bloodshed, and through so many difficulties acquired, and which gave them the command of every thing elfe that remained to the king, were faithfully reftored.

This change from a strict alliance to a cold neutrality, though it made no small difference in the Prussian affairs, yet, all things considered, must be regarded as an escape, and as a deliverance almost

as wonderful as his former. However, this circumstance could not fail of inspiring some degree of confidence into his enemies, which the king of Prussia endeavoured above

all things to prevent.

On the 21st of July, the orders arrived at the allied camp from Petersburg, for the Russians to separate themselves from his army, and return without delay to their own country. The king, without being confounded by this fudden order, and instead of slackening his efforts on account of this defertion, refolved to fall with vigour, and without delay, upon marshal Daun, and to attack him before the news of this change could reach him. Since he could no longer profit by the arms of the Russians, he endeavoured to profit at least by their appearance in his camp. The very next day therefore he attacked the Austrian army, whose right wing occupied the heights of Buckersdorff, drove them from that eminence, and from fome villages where they were advantageously posted. The success was not owing only to the spirit of the actual attack, but to an apprehenfion of the Austrians, that the whole united army of the Prussians and Muscovites was on the point of engaging them. The king of Pruffia made an use of those allies, in the moment they deferted him.

This lively attack was made with a loss of only three hundred men on the fide of the Pruffians; the number of the Austrians killed is not known. The prisoners amounted to one thousand; and fourteen pieces of cannon were taken. It was indeed no more than an affair of posts; but its consequences were important; for the communication of the Imperialists with ochweidnitz was now entirely and

finally cut off; they could not attempt any thing confiderable for the relief of that place. Prince Henry held them in continual alarm for Bohemia, and a great part of their attention, and no small part of their forces were kept continually engaged upon that fide.

The king of Prussia having thus pushed back marshal Daun, invested Schweidnitz, and laid fiege to that important fortress before his face. This was the fourth time which that place had been befieged fince the beginning of this war; and this circumstance alone might suffice to shew the many and extraordinary changes of fortune which diftinguished these campaigns. We apprehend no instance has happened before of any place like this of real strength being so often successively taken and retaken in the course of

a fingle war.

As Schweidnitz is the key of Silefia, and, though not quite a regular place, is notwithstanding well fituated and well fortified; as the garrison amounted to nine thousand men, commanded by a good officer, and affifted by a very experienced engineer, and as two great armies of the enemy observed all his motions, it was necessary to make the dispositions for the siege with uncommon care. His infantry were encamped on the heights behind Schweidnitz. His cavalry formed a chain in the plains of Keintzerdorf, to be nearer the camp of the prince of Wirtemberg, which was fituated fo as to prevent any enterprize from the county of Glatz. The prince of Bevern commanded a strong corps, which posted itself advantageously near Cosel. One under general Werner did the same at Neissa.

[C] 4

By these dispositions the Prussian convoys were protected, the principal places in Silesia guarded, the siege of Schweidnitz covered, and an easy communication preserved between all the detached corps employed in these several services.

The effects of this wife disposition were foon felt. Marshal Daun, despairing to succeed against the army, which, under the king in person, covered the siege of Schweidnitz, endeavoured to break this chain, and by that means diffress the Pruffians who were carrying on the fiege. Laudohn was therefore detached, with a very superior force, to attack the prince of Bevern, and to drive him from the advantageous post he occupied. This attack was made with all the celerity and refolution, which diftinguish the operations of this brave officer. But the prince, mindful of the difgrace he had formerly suffered in this province, opposed him with such constancy and perseverance, that the king of Proffia had time to come to his relief. The Austrians were then put between two fires, routed, and pursued with a terrible slaughter.

This attempt being defeated, the king of Prussia met with no disturbance in his preparations for the siege, and the trenches were opened on the night of the 8th of July.

Whilft the king of Prussia was making this advantageous use of his fortune, the armies of the French and the allies in Westphalia were not inactive. Among the commanders of the former a great disunion had long prevailed. The marshals de Broglio and de Soubize had mutually accused each other; the eamp and the court were for some time entirely distracted with the cabals of the partizans of these officers. The result was not tayour-

able to marshal Broglio. In him the French court was obliged to recal, and in some measure to disgrace, one of the very best of their officers. A fuspicion, and that not weakly founded, prevailed against this general, that unable to bear a competitor in fame, or an affociate in command, he had often, in order to difgrace those with whom he was to act, neglected to improve his favourable opportunities; and that in some instances, by his conduct, he had purposely occasioned fome failures, and even defeats. This was a fault which no great qualities in an officer could compensate. He was therefore removed from his command, and the conduct of the army left to the prince de Soubize, who was infinitely beloved by the foldiers for his generous and benevolent disposition; and marshal d'Etrees, who has been fo often mentioned in the course of this hiflory, was affociated with him.

The plan of the campaign, on the part of the French, did not differ much from that which had been formerly pursued. They had, as before, two armies; this under the prince de Soubize and marshal d'Etrees on the Weser, and another under the prince de Condé on the

Lower Rhine.

The disposition of the allies was also but little varied. The hereditary prince was posted in the bishopric of Munster, to watch the latter of these armies; and prince Ferdinand in person, with the body of the army, lay behind the Dymel to make head against the former. So little had the French prosited by their superior numbers, and superior resources in this continental war, and so little decisive use had they made even of some advantages in the field, that this

cam-

campaign commenced very nearly in the fame place, and they contended for pretty much the fame objects, which they had ftruggled for in the two preceding years.

So superior was the genius of prince Ferdinand, that under many disadvantages he was the first to commence offensive operations. The stroke he struck on this occasion would suffice alone to rank him with the first commanders of his age. His abilities throughout the war have never shone out with more lustre than in this campaign, which concluded it.

The French army was most advantageously posted, both for command of the country, and for strength, near a place called Graebenstein, in the frontiers of Hesse; their center occupied an advantageous eminence; their left wing was almost inaccessible by several deep ravines, and their right was covered by the village of Graebenstein, by several rivulets, and a strong detached body under one of their best officers, monsieur de Castries.

In this fituation they imagined they had nothing to fear from the attempts of prince Ferdinand, whose army, besides the inferiority of its numbers, was separated in such a manner, and in such distant places, that they judged it impossible it could unite in any attack upon their camp. But whilst they enjoyed themselves in full security, the storm was preparing to fall upon them from all quarters.

A confiderable corps of the allied army, under general Luckner, was posted to the eastward of the Weser, near Eimbecke, on the Leine. He lay there to observe prince Xavier of Saxony, who was encamped between the Wesra and

Gottingen. But if he watched the prince, the prince also watched him. When, therefore, he had orders to quit this post, that he might cooperate in the grand defign, he left a fmall party of his corps in his station, by which he deceived the prince of Saxony; and marching in the night with the utmost speed. he crossed the Weser, turned the right of the French army, and, without being discovered, placed himself upon their rear. General Sporken at the same time placed himself so as to attack the same wing in flank. Prince Ferdinand croffed the Dymel, in order to fall upon their center. The attack on the enemy's left was commanded by lord Granby.

These preparations were made with fo much judgment, celerity, and good order, that the French had not perceived the approach of the allies, when they found themselves attacked with June 24. infinite impetuofity in front, flank, and rear. The battle was fcarcely begun, when they thought of no-The corps under thing but flight. monfieur de Castries had time to retreat in tolerable order, and without any great loss. But it did not fare fo well with their center, and their left, which were opposed by the calm resolution of prince Ferdinand, and the generous courage of Granby.

As the French placed all their hopes rather in retreat than combat, an entire rout must have enfued, if monsieur Stainville, who commanded on the lest, had not thrown himself with the slower of the French infantry into a wood, which enabled him, at the expence of the best part of it, to cover the retreat of the army. Here this brave and accomplished officer made

a resolute stand, and for a long time fustained the whole weight of the allies. His corps was a devoted facrifice. All but two battalions were cut to pieces or made prisoners. The other bodies, covered by this resolute manœuvre, made a shift to shelter themselves under the cannon of Cassel, or precipitately escaped to the other fide

of the Folda.

Thus did the French army, by the virtue of monfieur de Stainville, escape a total defeat; but the confequences of the action were not recovered during the whole campaign. They loft much credit both in point of refolution and generalthip. Their infantry, in this engagement, confifted of one hundred battalions, when that of the allies was composed but of fixty. The common men made prisoners by the allies on this occasion were two thousand seven hundred and fifty, and no less than one hundred and fixty-two officers were taken. The English lost but a few men killed, and no officer of rank but lieutenant-colonel Townshend *, who fell with great glory to himself, and to the regret of the whole army.

Every thing in the conduct of prince Ferdinand appears the effect of a well-digested plan; and one great action completed always helps to disclose a series of bold, masterly,

and connected defigns.

As foon as the enemy was diflodged from their strong post, use was made of this advantage (whilft the French, under the hurry and confusion of their late misfortune.

were unable to provide against un. expected accidents) to push forward a body of the English under lord Granby and lord Frederick Caven-The French could scarcely imagine, that, whilft they were in possession of so strong a place as Caffel, and commanded an army fo fuperior in numbers to the allies, that, whilft prince Ferdinand braved them in front, they should find one of his detachments upwards of thirty miles behind them. In this emergency, monsieur de Rochambeau perceiving their motions, haftily collected some brigades of infantry and cavalry at Hom-July 6. bourg, to prevent, if poffible, the communication of the grand army with Francfort from being cut off. But they were charged with fo much vigour by the two English commanders, that, though they defended themselves with spirit for some time, they were in the iffue dispersed with confiderable loss. They were obliged to evacuate that tract of country. Fritzlar, Feltzberg, and Lohr; and almost all the important posts in the fouth part of Hesse were occupied by the allies. The communication with Francfort, from whence the French drew their whole fubfiftence, was absolutely intercepted.

To the north of Hesse also the allies were not less active, nor less fuccessful: they obliged prince Xavier, with his Saxon detachments, to abandon his advanced post on the Leine, and unite himfelf to the grand army. They got between him and Gottingen, by

^{*} This col. Townshend was second son to the hon. Thomas Townshend, Esq; He had diftinguished himself on several occasions. At Guadaloupe he was pushed overboard in the landing of the troops, but his black faved his life by jumping after him. In the last campaign in Germany, he was shot through the arm, and in this engagement he loft his life, feeking the post of honour that his duty did not require.

which the French garrison there was left without support. This garrifon, feeing its communication interrupted, blew up a part of the fortifications, and attempted a retreat; but finding no avenue open, they were obliged to return in confusion. Despairing of their ability to hold this important place, they thought themselves happy, when at length, with much management Aug. 16. and difficulty, they were able to evacuate it with-

out opposition.

Prince Xavier, after having, as we faid before, quitted his advanced fituation at Morungen in the territories of Hanover, united himself to the right of the principal army, which was posted to the eastward of the Fulda, not far from the place where that river forms an angle in its junction with the Wer-In this angle stands the town of Munden, a fortified place, in which the French had a garrison. Full of confidence from this fituation, they were under no appre-hensions: but the generals Zaftrow, Gilfac, and Wald-July 23. hausen, passed the Fulda in their fight, and under a heavy fire of their cannon. The corps of the two former officers possessed themselves of a wood on the enemy's right flank. General Waldhausen, in the mean time, had seized the village of Bonnevert, which enabled him to keep the garrison of Munden in check, and gave him also an opportunity, whenever the occasion required it, of falling on the enemy's rear.

The bold passage of the Fulda, and the judgment of the subsequent dispositions, insured the victory. Prince Xavier, for a good while, defended himself with an obstinate resolution; but finding

his flank gained, he began to give way. In this inftant Waldhausen, who had hitherto only watched the iffue of the engagement, threw in his horse upon their rear, and com-

pleated the defeat.

General Stainville, who occupied a ftrong intrenched camp in the neighbourhood, feeing the party of the prince of Saxony in danger of being totally cut to pieces, quitted his intrenchments with his whole army of ten thousand men, and haftened to their relief. Prince Frederick of Brunswick, attentive to this movement, with great quickness seized this critical opportunity. entered their camp the moment they had left it, and entirely destroyed In this action all their works. eleven hundred of the enemy were made prisoners.

The French finding their communication destroyed, their army furrounded and harraffed on every fide, and without intermission, were neither able to advance with a prospect of success, or to retreat with any hope of safety. In this distress they had nothing left but to call their army from the Lower Rhine to their affistance. No time was to be loft. Express after express was fent to haften them. In confequence of these dispatches, the prince of Condé advanced by forced marches; the hereditary prince fluck close to him, and kept himself in readinefs to fall upon his corps, when a favourable opportunity should offer.

In the mean time prince Ferdinand pressed upon Soubize's army. Advantageously as they were fituated, he offered them battle for a whole day. Rather than risque an engagement they decamped in the night, and quitted, without an action, those advantageous grounds called the heights of Mulfingen,

where

where they could not be attempted without the greatest difficulty and hazard; and the quitting of which gave prince Ferdinand the most important advantages over them.

Never were military operations pushed with more vivacity, whilst the negotiation for peace was in great forwardness. The two great contending courts had opened conferences, whilst their armies were cutting one another in pieces: but prince Ferdinand, on that account, rather strained than slackened his efforts. He knew that the negotiation for peace is always much for-

be made, ede to the

warded by the operations of the campaign, and that a fuccessful action often haftens the decision of a contested article. Perhapt too he was willing to shew in England, that the necessity of making peace ought not to be attributed to the circummítances of that part of the war which had been committed to his care. People imagined they could discern something like coldness towards this great commander in the new British ministry; and that he, on his fide, feemed rather to favour that party in England which was for prolonging the war.

War in Portugal. Plan of the campaign. Miranda, Braganza, and Chaves taken. Almeida besieged and taken. Count of La Lippe arrives in Portugal. Surprize of Valentia d'Alcantara, by general Burgoyne. Affair of Villa Velba. Spaniards retire.

THE events of the war in Germany, tho' its object was not more interesting than that in Portugal, feem to rank far before the actions of. the latter in dignity and importance. They naturally occupy the first place, and justify a more minute detail in an history of military ope-It is in Germany that the rations. great efforts of all the great powers in Europe were made from the beginning. Here the most considerable armies were maintained; here the great battles were fought; and on this theatre the great commanders gave a full scope to their genius. Germany seems, as it were, the natural foil of hostility; but Portugal, which had long languished in a tranquil obscurity, could scarce furnish out a faint image of war.

Of the state of the military in that country we have spoken in a preceding chapter. The marine was not on a much more respectable footing. About fix or feven ships of the line, and a very few frigates, composed all the naval force of Portugal that was sit for service; of that Portugal which had formerly been one of the first maritime powers in Europe. The fortistications in that kingdom had been also long neglected, and scarce any of them were in a condition to sustain a regular siege.

Portugal, however, possessed forme advantages; but they were only such as she derived from her weakness. The extreme barrenness and poverty of the country, made it very difficult for an army, either of friends or enemies, to subsist in it. The badness of the roads, and the frequency and steepness of the mountains, which occupy the greatest part of that kingdom, made it no less difficult to advance with rapid marches, and to improve the advantages of the campaign with pro-

per expedition. The nature of the country also rendered it not unfit for that species of defence, which the best force it had was best qualified to make; that is, in the way of an irregular war, by its armed peafantry; for the defiles in many places are of fuch a nature, as to be capable of being maintained by small and undisciplined body, against very numerous and very regular forces. And the Portuguefe, from the highest to the lowest, were animated with fuch a fincere and inveterate hatred to the Spanish name, and were filled with fo much terror at the prospect of falling a fecond time under the government of that nation, that great hopes were entertained of their exerting themselves to the utmost on this occasion, and of their rousing that natural courage in which the Portuguese are not deficient.

These advantages, however, did by no means balance the dangers to which that kingdom was exposed, from the joint hostility of France and Spain. All the hope of Portugal was centered in England, for whose sake, and in whose quarrel the had been drawn into this unequal contest. The greater the weakness of Portugal was, the more conspicuous were the magnanimity and resources of Great Britain, who made, in the close of so expensive and ruinous a war, fuch aftonishing efforts, and who was in a condition by her strength to prop up, at least for a time, so very feeble a fystem. She sent to Portugal, officers, troops, artillery, arms, military stores, provisions, and money, every thing which could enable the Portuguese to exert their natural firength, and every thing which could supply that strength where it it was deficient.

When the Bourbon courts mad war against Portugal, the declared object was to prevent Great Britain from the military and commercial use of the ports of that kingdom. As it was impossible to attain this object by naval operations, they attempted it, by military ones, and aimed their principal endeavours at the two great ports, to which the English principally refort, Oporto and Lifbon. The possession of these two objects would probably have finished the war in their favour; the possession of either of them would have given them the most decisive advantages in it. With this view three inroads were to be made, one to the north, another was proposed more to the fouth, whilft the third was made in the middle provinces, in order to fustain these two bodies, and preserve the communication between them. The reader must confider this, as what appears from their defigns, and from the fleps they took to execute them, to have been their general plan; not that it was ever perfectly executed in all its parts, or at the fame time.

The first body which commenced hostilities was commanded by the marquis de Sarria. This army entered into the north-east angle of Portugal, and marched towards This town, though in Miranda. no good state of defence, might have delayed them in their progress; but a powder magazine having blown up by accident, the fortifications were ruined, and the Spaniards, before they had raised their first battery, marched. May 9. into the town by the

breaches in the wall.

Animated by this easy and fortunate success, they proceeded to Braganza, a confiderable city, from whence the royal family of Portugal

derived its ducal titles. This town made no greater defence than Miranda: From thence a de May 15 tachment marched to Moncorvo, which was fulrendered in the like manner; and every thing was tleared before them to the banks of the Douro. A party under count O Reilly made a forced march of fourteen leagues; May 24. in two days, to the city of Chaves, which was immediately evacuated. By these successes they became mafters of almost the whole of the extensive province of Tralos Montes, and their progress spread a general alarm. Oporto was almost given up as loft; and the admiraley of England prepared transports to carry off the effects of the British factory. However, the body which had traverfed this province without refistance, attempting to cross the Douro, had its progrefs thecked on that fide. The peafants, animated and guided by fome English officers, and feizing a difficult pass, repulsed and drove them back to Torre de Moncorvo. They are faid to have been guilty of fome cruelties to the Spanish prisoners who fell into their hands. These cruelties were afterwards feverely retaliated upon them. These people, on both sides naturally ferocious, had not been fufficiently inured to war, to moderate its fury, and reduce it under laws; they hated mutually, and they gave a full fcope to their hatred: they did not fee each other as foldiers, but as enemies.

The fecond body of the Spaniards, which we have mentioned as. the connective link between the two others, entered into the province of Beira, at the villages called Val de Mula and Val de Coelha. They were joined by strong detachments,

amounting to almost the whole army in Tralos Montes, and immediately laid fiege to Almeida, which, though in no good order, was the strongest and best provided place upon the frontiers of Portugal, Besides, it was of the greatest importance from its middle fituation, as the poffession of it would greatly facilitate the operations upon every fide, and would especially tend to forward an attempt upon Lisbon, which was the capital object, towards which, at this time, all the endeavours of the Spaniards feem to have been directed.

Almeida was defended with fofficient resolution; but its fate was forefeen as foon as it was attempted, there being no means of affording relief to any of the places be-It furrendered, Aug. 25. fieged. however, upon terms honourable to the garrison.

The Spaniards, having made themselves masters of this place, overspread the whole territory of Caftel Branco, a principal district of the province of Beira, making their way to the fouthward, until they approached the banks of the Tagus. During the whole of their progress, and indeed during the whole campaign, the allied troops of Great Britain and Portugal had nothing that could be called a body of an army in the field, and they could not think of oppofing the enemy in a pirched battle. All that could be done was by the defence of passes, by skirmish, and by surprize.

By this time the count of la Lippe Buckeburg had arrived in Portugal. Lord Tytawly, who had been fent, at the defire of the court of Lifbon, thither before the breaking out of the war, being difgusted by the behaviour of fome perfons at court, and much disappointed in his expectations of

the exertion they had promised to imme. make of their own force, and even which, for the use they had made of the succours from England, had been recalled very early in the campaign, ortugal, and probably not contrary to his own inclination.

It is impossible to express the

It is impossible to express the joy which filled the whole nation at the arrival of so celebrated an officer as the count la Lippe to their assistance. More unanimity was now expected, as the count had nothing to complain of, and came an entire stranger to all the subjects of debate, which had hitherto existed between the British general and the court of Lisbon.

That army, which we have mentioned as the third corps destined for the invasion of Portugal, affembled on the frontiers of Estremadura, with an intention of penetrating into the province of Alentejo. Had this third body been joined to the others already in Portugal, it would probably have formed such an army as might, in spite of any obstruction, have forced its way to Lisbon: had it acted separately, it might have greatly diftracted the defence, fo as to enable some other body to penetrate to that city. It was necessary to prevent, if possible, their entrance into Portugal; fince their mere entrance would have been almost equal, in its consequences, to a victory on their fide.

The count la Lippe, therefore, formed a defign of attacking an advanced body of the Spaniards, which lay on their frontiers, in a town called Valentia de Alcantara, as he heard that they had here amassed considerable magazines. The conduct of this important enterprize was committed to brigadier general Burgoyne. This gallant

and able officer, though at a distance of five days march, and in spite of all the disappointments and obstructions to which services of this kind are so liable, when they cannot be executed immediately; yet effected a complete surprize on the town of Vapirize on the to

Although they were disappointed in their expectations of finding magazines in this place, the effect of this well-conducted enterprize was The taking of this genot loft. neral was probably the cause which prevented the Spaniards from entering into the province of Alentejo. This feemed to have been for fome time the deflination not only of that particular body, but also the great object of the Spanish army, which had hitherto acted in Beira. The former of these provinces is a plain, open, fertile country, where their cavalry, in which confifted the chief of their army, and in which lay their most marked superiority. might have acted, and acted decifively; whereas the latter was a rough mountainous region, in which the horse were subsisted with difficulty, and could be of little fervice. To prevent, therefore, the entry of the Bourbon army from any quarter, into Alentejo, seemed to be the great and fingle object of the campaign on our fide. General Burgoyne, by his expedition into the Spanish territories, had already prevented it on one part; and the vigilance and activity of the same officer had no small share in preventing it also on the other.

That

That part of the Bourbon army, which acted in the territory of Caffel Branco, had made themselves masters of feveral important paffes, which they obliged fome bodies of the Portuguese to abandon. They attacked the rear of the combined army, which was paffing the river Alveito, with the appearance of a retreat; but, in reality, with a view to draw them infenfibly into the mountainous tracts : here they were repulsed with loss; but still they continued masters of the country; and nothing remained but the paffage of the Tagus, to enable them to take up their quarters in Alentejo.

Burgoyne, who was posted with an intention to obstruct them in their passage, lay in the neighbourhood, and within view of a detached camp, composed of a confiderable body of the enemy's ca-valry, which lay near a village called Villa Velha. As he observed that the enemy kept no very foldierly guard in this post, and were uncovered both on their rear and their flanks, he conceived a defign of falling on them by furprize. He confided the execution of this defign to colonel Lee, who turned their camp, fell upon their rear in the night, made a confiderable flaughter, dispersed the whole party, destroyed their magazines, and returned with scarce any loss. Burgoyne, in the mean time, supported him by a feint attack in another quarter, which prevented the enemy's being relieved of the English arms in other parts from the adjacent pofts.

in a critical moment, was attended ed to them.

In this manner Portugal was faved, at least for that campaign, by the wife conduct of count la Lippe, and the distinguished valour of the English commanders and foldiery: all that was wanting towards their deliverance was accomplished by the success of the English army in more distant quarters, and by the peace, in which fo valuable and fo exposed an ally was not neglected. There never was probably so heavy a florm of national calamity, read, to fall upon an unprovided people fo happily averted, or fo speedily blown over. Every thing, at the beginning of this campaign, bore the most louring and ominous asped to the affairs of Great Britain. A it advanced, the fky continually cleared up; and the fortune of no nation, towards the close of it, was enlivened with a more brilliant and more unclouded prosperity. We shall now proceed in the relation of those successes, and of the progress of the world, where new scenes of This advantage, being obtained danger and honour were now open

CHAP. VII.

Expedition against Martinico. Force sent thitber. Troops land at Cas Navire. Nature of the country. Attack of the posts near Fort Royal. Fort Royal surrendered. St. Pierre and the whole island capitulate. St. Lucie, the Grenades, and St. Vincent taken. Preparations for war against the Spanish West Indies.

Towards the close of the last year it was determined to reme the scheme of operations in he West Indies; where nothing had een attempted fince the year 1759. istressed as the French trade to eir islands had been, it still connued a resource to that nation. n the other hand, nothing puld possibly fornish us with aces of more importance, either retain, or to exchange upon peace, than our fuccess in is part of the world. Another infideration had probably no small are in directing our arms towards at quarter. From the time that e dispositions of Spain had beme equivocal, it was necessary to ke fuch steps, as would put us à respectable situation, in case war with that kingdom should come unavoidable. It was therete very proper to have a ftrong nament in the West Indies, at fide on which Spain is most Inerable, and in which every ound affects a part of the quickeft ofibility. Accordingly the force hich was fent into the West Indies this occasion, was very great; d, if we take the naval and miliy together, it was fuch an armaent as had never been before feen that part of the world. It was tainly very right to leave as tle to hazard as possible; and en, in the most frugal method proceeding, a great many men Vol. V.

must have been employed, and a great deal of money spent, it would have been an unpardonable error, from a consideration of almost any saving, to have lest any thing imperfect; especially at a time, when the effect of every operation became, almost hourly, more and more critical and decisive.

Every thing which had been an object of war in North America, was by this time completely acquired. It was therefore easy to draw a very confiderable part of the army from thence. Eleven battalious were drawn from New York; a draught was also made from the garrison of Belleisle. These were reinforced by fome troops which had been scattered among the Leeward islands; so that the whole land armament did not fall very short of twelve thousand men. General Monkton, who had acquired fo much reputation in North America, and had received a very grievous wound at the taking of Quebec, commanded the land forces in this expedition. The marine was under rear-admiral Rodney.

The failure in 1759 did not discourage our administration from making Martinico the object of another attempt. The English fleet, after having rendezvouzed at Barbadoes, came before this island on the 7th of January, 1762. The troops landed at a creek called Cas Navire, without the loss of a

[D] man;

₿

man; the fleet having been disposed fo properly, and having directed their fire with such effect, that the enemy was obliged in a short time to abandon the batteries they had erected to defend this inlet.

When the landing was effected, the difficulties were far from being at an end. It is true, that neither the number nor the quality of the enemy's regular troops in the island was very formidable. But the militia was numerous, well armed, and not unqualified for fervice in the only kind of war, which could be carried on in their country. Befides, the whole country was a natural fortification, from the number of ravines with rivulets between them, which lay from diffance to distance. Wherever these grounds were practicable, the French had posted guards and erected batteries. It is easy from hence to discern what obstructions the progress of an army was liable to, particularly with regard to its artillery. These obfiructions were no where greater than in the neighbourhood of the place, against which the first regular attack was propoled.

This town and citadel is overlooked and commanded by two very confiderable eminences, called Morne Tortenson and Morne Garnier. Whilft the enemy kept possession of these eminences, it was impossible to attack the town; if they loft them, it would prove impossible to defend it. Suitable to the importance of those fituations were the measures taken to render them impregnable. They were protected, like the other high grounds in this island, with very deep ravines; and this great natural strength was improved by every contrivance of art. The Morne Tortenson was first to be

attacked. To favour this operation, a body of regular troops and ma rines were ordered to advance on the right along the fea-fide, toward the town, in order to take the redoubts which lay in the lower grounds. A thousand failors, in flat. bottomed boats, rowed close to the fhore to affift them. On the left towards the country, a corps of light infantry, properly supported, was a get round the enemy's left; whill the attack in the center was made by the British grenadiers and the body of the army, under the fire of but teries, which had been erected or the opposite side with great labor and perfeverance; the cannot having been dragged upwards & three miles by the feamen.

All the fituations which commanded the town and citadel were now fecured; and the enemy waited no longer than until the batteries peb. And against them were common pleted to capitulate, and to furrender this important place, the second in the island.

The capital of the island, St. Pierre, still remained to be reduced: this is also a place of no contemptible strength; and it was apprehended that the refistance here might be confiderable, if the frength of the garrison in any degree corresponded with that of the fortifications, and with the natural advantages of the country. Our troops therefore were still under some anxiety for the final success of their work, and feared, if not difappointment, at least delay. But the reduction of Fort Royal had fo greatly abated the enemy's confidence, that the militia despaired making any effectual defence. The planters alfo, folicitous for their fortunes, were apprehenfive of having their estates ruined by a war 100 long continued, or perhaps of loing all by passing the opportunity of a favourable capitulation. Influenced by these motives, and disheartened by the train of missortunes which had attended the French arms here and in all other parts of the world, they resolved to hold out no longer; and general Monkton, just as he was ready to embark for the reduction of St. Pierre, was fortunately prevented by the arrival of deputies, who came to capitulate for the surrender of that place, and of the whole island.

The furrender of Martinico, which was the feat of the fuperior government, the principal mart of trade, and the center of all the French force in the Caribbees, naturally drew on the furrender of all the dependent islands. Grenada, a fertile island, and possessed of some good harbours, was given up without opposition. St. Lucia, and St. Vincent, the right to which had for long been objects of contention between the two nations, followed its example. The English were now the fole and undisturbed possessors of all the Caribbees, and held that chain of innumerable islands which forms an immense bow, extending from the eastern point of Hispaniola almost to the continent of South America. And though fome of these islands are barren, none of them very large, and not many of them well inhabited, they boaft more trade than falls to the lot of many respectable kingdoms.

The time, in which Martinico was reduced, was a circumstance of almost as much consequence as the reduction itself; for the war against Spain having been declared in the beginning of the year, it became adviseable to strike early such an effective blow against that nation as

[D] 2 migh

might incline them to a speedy peace, or might influence the fortune of the whole war, if, contrary to our wishes, the war should continue. It was, on this plan, necessary to employ a very great force, and, of course, to call away a very considerable part of that which had been employed at Martinico, whilst the season permitted them to act.

When the British administration determined to transfer the war into the Spanish West Indies, with great judgment they fixed their eyes at once upon the capital object; and resolved to commence their operations where others of less ability would have chosen to conclude them. In an attack upon subordinate places, the conquest would not have been much more certain; when obtained, it would be far from decifive; and a failure would have been fatal, as it would include a loss of reputation. The failure of an armament in a subordinate attack is a bad prepa-

rative for a greater attempt. The plan, therefore, of the war of 1740 in the Spanish Indies, in which we began with Porto Bello, and fo proceeded to Carthagena, &c. was mean, because the success in one of these attempts did nothing towards infuring fuccess in the other; and if we had fucceeded in both attempts, our advantage would have had but little influence on a third. But the plan of the war, just now concluded. was great and just; because we began with the Havannah, in which the whole trade and navigation of the Spanish West Indies centers, and without which it cannot be carried on. If we should acquiesce in this conquest, this conquest alone would almost have finished the war; be cause it would have utterly intercepted the enemy's resources. If we chose to pursue our advantage, is exposed the whole Spanish Ame-

Commanders in the expedition against the Havannah. Fleet sails from Portsmouth. Passage through the old streights of Bahama. Town and harbour of the Havannah described. Troops land. Disposition of the troops Siege of Fort Moro. Captain Harvey cannonades the Moro. English batter fired. Distress of the English forces. Succours arrive from North America. A sally. The fort stormed. Operations against the town. The Havannah surrenders. Advantages of this acquisition.

IT being determined to commence with this enterprize, such commanders were to be chosen, as could be safely intrusted with the conduct of an undertaking so weighty, and on the success of which so much depended. Lord Albemarle, the friend and disciple of the D. of C. commanded the land forces. Admiral Pococke, who having contri-

buted by his valour towards that fovereignty which his country had obtained in the East Indies, was now chosen to extend its empire and its honour in the West.

They failed from Portsmouth on the 5th of March, the day on which the Grenades were surrendered. A sleet had failed from Martinion under the command of that spirited

and intelligent officer, Sir James Douglas, in order to reinforce them. The fquadrons very happily met, without delay or dispersion, at Cape Nichola, the north-west point of Hispaniola, on the 27th of May. After this junction, the armament amounted to nineteen ships of the line; eighteen small vessels of war; and near one hundred and fifty transports, which conveyed about ten thousand land forces. A supply of four thousand had been ordered from New York, and was expected to join them very near as early as they could be supposed able to commence their operations.

There were two choices before the admiral for his course to the Havannah. The first and most obvious was the common way, to keep to the fouth of Cuba, and fall into the track of the galleons. But this, though by much the fafest, would prove by far the most tedious passage; and delays, above all things, were to be avoided, as the fuccess of the whole enterprize would probably depend upon its being in forwardness before the hurricane season came on. He therefore resolved to run along the northern shore of that island, pursuing his career from east to west through a narrow passage, not less than seven hundred miles in length, called the old streights of Bahama.

This passage, through almost the whole of its extent, is bounded on the right and left by the most dangerous fands and shoals, which render the navigation fo hazardous, that it has usually been avoided by fingle and fmall veffels. There was no pilot in the fleet whose experience could be depended on to conduct them fafely through it. The admiral, however, determined on this pal-

fage; and being provided with a good chart of lord Anfon's, he refolved to trust to his own fagacity. conduct, and vigilance, to carry fafely through those streights a fleet of near two hundred fail. So bold an attempt had never been made; but every precaution was taken to guard this boldness from the imputation of temerity. A vessel was fent to reconnoitre the paffage, and, when returned, was ordered to take the lead; fome frigates followed; floops and boats were stationed on the right and left on the shallows, with well adapted fignals both for the day and the night. The fleet moved in feven divisions. And being favoured with pleasant weather, and secured by the admirable dispositions which were made, they, without the smallest loss or interruption, got clear thro' this perilous passage on the 5th of June, having entered it the 27th of May.

The Havannah, the object of their long voyage, and of fo many anxious hopes and fears, was now before them. This place is not denominated the capital of Cuba; St. Jago, fituated at the fouth-east part of the island, has that title: but the Havannah, though the fecond in rank, is the first in wealth, fize, and importance. The harbour, upon which it flands, is, in every respect, one of the best in the West Indies, and perhaps in the world. It is entered by a narrow paffage, upwards of half a mile in length, which afterwards expands into a large bason, forming three cul de faes; and is sufficient, in extent and depth, to contain a thousand fail of the largest ships, having almost throughout fix fathom water, and being perfectly covered from every wind. In this bay the rich fleets from the feveral parts of the

Was

Spanish West Indies, called the Galleons and the Flota, affemble, before they finally fet out on their

voyage for Europe.

This circumstance has rendered the Havannah one of the most opulent, flourishing, and populous cities in this part of the world, Great care was taken to fortify and fecure a place, which, by being the center of fo rich a commerce, would naturally become the fairest mark for the attempts of an enemy. The narrow entrance into this harbour is fecured on one fide by a very firong fort, called the Moro, built upon a projecting point of land: on the other, it is defended by a fort called the Puntal, which joins the town. The town itself, which is fituated to the westward of the entrance of the harbour, and opposite to the Moro fort, is furrounded by a good rampart, flanked with bafzions, and covered with a ditch.

The Spaniards, who had been for fome time preparing for war, had formed a confiderable navy in the West Indies : this fleet, which was near twenty fail, mostly of the line, lay at this time in the bason of the Havannah; but they had not, when our armament appeared before the port, received, it feems, any authentic account from their court concerning the commencement of hostilities between the two

nations, lap a ton

Whether the Spaniards were rendered inactive by the want of infructions, whether all their ships were not in fighting condition, or whatever elfe was the cause, this fleet lay quiet in the harbour. If some of the above reasons did not. The principal body of the arol oppose, it may be very rationally supposed, that their best part would have been to come out, and fight

our fquadron. They were not very far from an equality; and though the iffue of a battle might have proved unfavourable to them, yet a battle tolerably maintained would have much disabled our armament, and perhaps have been a means of preventing the fuccess of the whole enterprize. The loss of their fleet in this way might possibly have saved the city; but, the city once taken, nothing could possibly fave the fleet. It is true, they much trufted and not wholly without reason, to the strength of the place, and to those aftonishing difficulties which attend any military operation, that is drawn out to length in this unhealthy climate. In other respects, they were very far from being defcient in proper measures for their defence. They made a strong boom across the mouth of the harbour; and almost the only use they maded their shipping, in the defence of the place, was to fink three of them behind this boom.

When all things were in readness for landing, the admiral, with a great part of the fleet, bore away to the westward, in order to draw the enemy's attention from the true object, and made a feint, as if he intended to land upon that fide; while commodore Keppel and cap tain Harvey, commanding a detach ment of the fquadron, approached the shore to the eastward of the harbour, and effected a june; landing there in the utmost order, without any opposition, having previously filenced a fmal fort, which might have given fom

difturbance.

was destined to act upon this fide It was divided into two corps; one of which was advanced a contderable

derable way in the country, towards the fouth-east of the harbour, in order to cover the fiege, and to fecure our parties employed in watering and procuring provisions. This corps was commanded by general Elliot. The other was immediately occupied in the attack on Fort Moro, to the reduction of which the efforts of the English were principally directed, as the Moro commanded the town, and the entrance of the harbour. This attack was conducted by general Keppel. To make a diversion in favour of this grand operation, a detachment, under colonel How, was encamped to the westward of the town. This body cut off the communication between the town and the country, and kept the enemy's attention divided. Such was the disposition, and it was impossible to find a better, of the land forces during the whole fiege.

In the midft of this fharp and

This was a mortifying ftroke. It was felt the more feverely, because the other hardfhips of the fiege were become by this time almost infupportable. The fickness fomething of which the troops had brought with them from Martinico, and which increased infinitely in this unwholesome country and rigorous fervice, had reduced the army to half its number, at the fame time that it doubled the farigue of those few who still preferved fome remains of firength. Five thousand foldiers were at one time down in various distempers ; no less than three thousand of the feamen were

whilst they beheld this gallant army wasting away by diseases; and they could not avoid trembling for that noble seet, which had rid so long on an open shore, and which must to all appearance be exposed to inevitable ruin, if the hurricane season should come on before the reduction of the place. A thousand languishing and impatient looks were cast out for the reinforcement from North America. None however as yet appeared; and the exhausted army was left to its own endeavours. Many fell into despair, and died, overcome with satigue, anguish and

diappointment. But in the midft of these cruel delays and diffreffes, the fleadiness of the commanders infused life and activity into their troops, and roused them to incredible exertions. The rich prize, which was before them; the shame of returning home baffled; and even the ftrenuous refiftance which was made by the enemy; all thefe motives called loudly on their interest, their honour, and their pride, and obliged them to the exertion of every nerve. Nobody could imagine that it was this reduced and flender army, by which these astonishing efforts were made, and this extentive sphere of duty so perfectly filed. New batteries arose in the place of the old; the fire foon became equal, and then superior to that of the enemy. They by degrees filenced the cannon of the fort, beat to pieces all the upper July 20. works, and made at length a lodgment in the covered way. Their hopes were now become more lively, Some days before they had gained this grand advantage, the Jamaica fleet appeared in its passage to Europe, with feveral convenien-

whilst they beheld this gallant army wasting away by diseases; and they could not avoid trembling for that noble seet, which had rid so long on an open shore, and which must so all appearance be exposed to inevitable ruin, if the hurricane season should come on before the reduction of the siege. Not many days after this they rejudy 28. Some of the New York reinforcement. Some of the transports in their passes thro' the old Bahama Streights were lost, but the men were saved on the adjacent islands.

These favourable events infused double life into their operations, in this advanced state of the siege; but a a new and grand difficulty appeared, just at the seeming accomplishment of theirwork. An immense ditch yawned before them, for the greater part cut in the folid rock, eighty foot deep, and forty foot wide. To fill it up by any means appeared impossible. Difficult as the work of mining was in those circumstances, it was the only expedient. It might have been an impracticable one, if fortunately a thin ridge of rock had not been left, in order to cover the ditch towards the fea. On this narrow ridge, the miners wholly uncovered, but with very little loss, passed the July 20. themselves in the wall.

It now became visible to the governor of the Havannah, that the fort must be speedily reduced if left to its own firength. At all events fomething must be done in this exigence for its immediate relief. Accordingly before break of day a body of twelve hundred men, mostly composed of the country militia, Mulattoes and Negroes, were transported aerofs the harbour, climbed the hills, and made three attacks upon our posts. But the ordinary guards, though furprifed, defended themselves so resolutely, that the Spaniards made little impression, and were not able to ruin any part of the approaches. The

posts

posts attacked were speedily reinforced, and the enemy, who were little better than a disorderly rabble, and not conducted by proper officers, fell into terror and confu-They were driven precipitately down the hill with great flaughter; fome gained their boats, others were drowned, and they loft in this well imagined, but ill executed fally, upwards of four hundred men.

This was the last effort for the relief of the Moro; which, abandoned as it was by the city, and while an enemy was undermining its walls, held out with a fullen resolution, and made no fort of proposal to capitulate. The mines July 30. at length did their bufinels. A part of the wall was blown up, and fell into the ditch; leaving a breach, which tho' very narrow and difficult, the general and engineer judged practicable. The English troops, who were commanded on this most dangerous of all services, rejoiced that it was to be the end of labours much more grievous to them. They mounted the breach, entered the fort, and formed themselves with so much celerity, and with fuch a spirited coolness of resolution, that the enemy, who were drawn up to receive them, and who might have made the affault an affair of great bloodshed, astonished at their countenance, fled on all hands. About four hundred were flaughtered on the spot, or ran to the water, where they perished. Four hundred more threw down their arms, and obtained quarters The fecond in command, the marquis de Gonfales, fell whilft he was making brave, but ineffectual efforts to animate and rally his people. Don Lewis de Velasco, the governor, who had hitherto de-

fended the fort with fuch obstinate bravery, feemed refolved in this extremity to share the same fate with it. He collected an hundred men in an intrenchment he had made round his colours. But feeing that all his companions were fled from him. or flaughtered about him, difdain. ing to retire or call for quarter, he received a mortal wound, and fell, offering his fword to his conquerors, TheEnglish wept with pity and admi. ration over that unfortunate valour. which had occasioned them so may toilsome hours, and cost them is

many lives.

Thus the Moro came into our possession after a vigorous struggle, forty-four days from the time the first operations had been begun against it. No time was lost to profit of this great advantage, notwithstanding that the fickness sil raged like a pettilence, and that many new and great works were to be undertaken. Not only the fire of the fort was turned again the town; but a line of batteries was erected along the hill of the Cavannos, on the extremity of which the fort flands By these batteries, which mounted three and forty pieces of cannon, and twelve mortars, almost the whole eastern fide of the city was commanded from one end to the other. Preparations for an attack were also made, and batteries erede ed to the westward of the town which on that fide had hithern been only watched. Some time before a part of the fecond division of the troops from North America had arrived, Apar had been taken by a squadrond French men of war; but those will escaped, came very seasonably, and were of fignal fervice. When

When those preparations were perfectly ready to take effect, Aug. 10. lord Albemarle by a meffage represented to the governor the irrefiftible force of the attack, which he was ready to make upon the town, but which, in order to avoid unnecessary effusion of blood, he was willing to fuspend, that the Spaniards might have leifure to capitulate. The governor in a reso-lute, but a civil manner returned, that he would defend the place committed to him to the last extremity, and began instantly to fire.

When

To convince the governor that the menaces employed were not an empty boaft, ford Albemarle the very next morning ordered a general fire from the batteries, which was poured from all fides, with fuch continued and irrefistible fury, that in fix hours almost all the enemy's guns were filenced. To the inexpressible joy of the fleet and army, flags of truce appeared from every quarter of the town. A capitulation enfued, in which the established religion, the former laws, and private property were secured to the inhabitants. The garrison, which was reduced to about seven hundred men had the honours of war, and were to be conveyed to Spain. A district of an hundred and eighty miles westward of the Havannah was yielded along with the town. The Spaniards struggled a long time The to fave the men of war; but this was a capital point, wholly inadmissible. They

two days altercation, they gave up these points, and the English troops were put in possession of the Havannah on the 14th of August, when they had been before it two

months and eight days.

Although we have not purfued in exact order all the detail of the more minute operations of this memorable fiege, we have dwelt on it a longer time, than we have on our plan generally allowed to fuch transactions; because it was, without question, in itself the most considerable, and in its confequences the most decisive conquest we have made fince the beginning of the war; and because in no operation were the courage, fleadiness, and perseverance of the British troops, and the conduct of their leaders more confpicuous. The acquisition of this place united in itself all the advantages which can be acquired in war. It was a military advantage of the highest class; it was equal to the greatest naval victory, by its effect on the enemy's marine; and in the plunder it equaled the produce of a national fubfidy. Nine fail of the enemy's thips of the line, some of the finest vessels in the world, were taken, with four frigates. Three of their capital ships had been, as already mentioned, funk by themselves at the beginning of the fiege; two more were in forwardness on the flocks, and these were destroyed by the English. The enemy, on and this occasion, lost a whole fleet. They also In ready money, in the tobacco made some attempts to have the collected at the Havannah on acharbour declared neutral during the count of the king of Spain, and war; but this was no less essential in other valuable merchandizes, the to the completeness of the conquest, plunder did not perhaps fall short and was steadily refused. After of three millions sterling,

So lucrative a conquest had never before been made. But this immense capture, though it inriched individuals, contributed nothing directly to the public service. However, it might be faid to contribute fomething to it indirectly; by in-creasing the stock of the nation, and supplying that prodigious drain of treasure, which for several years had been made from this kingdom for foreign subfidies, and for the maintenance of armies abroad. If it had not been for fuch pecuniary supplies, with which the uncommon successes of this war were attended, it never could have been maintained in the extent to which it was carried, notwithstanding the increase of trade, which has been uniformly progressive for the last three years. It has in a loofe way been computed, that the fuccess of our arms in the East Indies, independently of the great increase of valuable merchandize, (which used to be formerly the fole produce and advantage of the East India commerce,) has brought into England during the war, near fix millions in treasure and jewels.

The capture of the Spanish re-May 21. gifter ship, the Hermione, which happened foon after the commencement of the war with Spain, and just as she was on

the point of entering one of the ports of Old Spain, must be added to these resources; this capture was little short of a million. The taking of this fingle ship is not altogether unworthy of a place in history; because it had no small influence on the affairs of the Bourbon alliance, and confiderably funk those resources of money, which were the principal objects to France, when she formed that famous treaty. All these advantages were without any confiderable allay on the fide of Great Britain; they would have ferved to ballance any possible fucces, which the enemy might have had in Portugal. But their fuccess in that quarter, where they had entertained the mof fanguine hopes, was by no mean confiderable, and very far from tending to any thing decisive. These confiderations helped to dipose the Bourbon courts to peace, almost as foon as they had jointly entered into the war; and Europe, after having been deceived in the hopes of tranquillity, which were entertained from the late negotiadeeper than ever into war, was in reality approaching fast to peace, and the public repose was preparing when it feemed to be at the greatest distance.

CHAP. IX.

Proposals for peace. State of the ministry and parties. Dukes of Bedford and Nivernois employed in the negotiation. Newfoundland taken and retaken. War in Germany. Hereditary Prince defeated at Iohannisherg. French repulsed. Cassel invested. Remarkable cannonade at Bucker Muhl. French take Amonebourg. Cassel surrendered to the allies. War in West-phalia concluded.

WHEN France had found experimentally, that the present at least was not the favourable time for drawing from her alliance all those advantages with which she flattered herself, she inclined in good earnest to peace. The fincerity of her procedure in the former negotiation might be justly questioned; because she had prepared an after game in case of its breaking off. And the for much relied on it, that it is very possible the negotiation itself was but a feint made to cover and to prepare that project. But finding that Great Britain was neither intimidated by the threats of that formidable alliance, nor at all likely to be reduced by the exertion of its forces; the came in good earnest into these pacific fentiments, which formerly the had only counterfeited. The how progress of the Bourbon troops in Portugal, the retrograde motion of the French army in Germany, the taking of Martinico and its dependencies, and the imminent danger in which they beheld the Havannah, all conspired to humble the pride, and dash the hopes of the Bourbon alliance.

On the fide of Great Britain likewife, the dispositions to peace became much more cordial. No people were ever less intoxicated with their successes. Victories were

become familiar to us, and made but little impression. The marks of public joy on the most considerable conqueits, were become much flighter and colder, than were shewed at the beginning of the war, upon very trivial advantages. Befides, the nation had occasion for peace. Though her trade had been greatly augmented, a circumstance without example favourable, and though many of her conquests, as we have feen, were very far from unlucrative, her supplies of money, great as they were, did not keep pace with her expences, The fupply of men too, which was necesfary to furnish the waste of so extensive a war, became sensibly diminished, and the troops were not recruited but with some difficulty, and at a heavy charge. It was time to close the war, when every end, we could rationally propose to ourselves in carrying it on, was anfwered; we had enough in our hands to answer all our demands, and almost all our expectations; and as it is grown into a fort of maxim, that nations greatly victorious, must cede something on a peace, the difficulty on our fide was only what, and how much we should retain. Not that there was a doubt. but whatever choice of acquilition could be made upon any rational principles, a great deal would fill

remain to give the fullest fcope to every fentiment of equity and moderation.

All these were sufficient inducements to peace. But other things operated as causes. An alteration in the fystem of the British ministry had begun this war; another alte-

ration put an end to it.

The whole council had been almost unanimous to oppose Mr. P. in his scheme for precipitating the declaration of war against Spain. They thought his principles too violent, and they did not perfectly like his person. When he retired from public bufiness, it seemed as if they breathed more freely, and had got rid of a burthen that oppressed them. But he was not long removed, when it appeared that the remaining part of the fystem, was framed upon principles to very difcordant in themselves, that it was by no means likely to fland.

The D. of N-, first lord of the treasury, by his early zeal in favour of the protestant succession, by the liberal and politicuse he had made of a great fortune, by the obligations which in a course of many years, and in a fuccession of great employments, he was enabled to confer on some of the most consider- of the stole: afterwards, taking ! able people in the kingdom, had attached a great number to his fortunes, and formed an interest in the cretary of state. On the remora parliament and the nation, which of Mr. P. who preferved a fort of at was extremely difficult to over- union in the administration by their tern, or even to shake. He came common dread of him, the out to be confidered as the head of the competition was between the D. of whigs; and he was in reality well N. and L. B. The former could qualified in many respects for the not well endure that decay of inchief of a party, from his unbound- fluence, which, on a thousand & ed liberality, from his affability, casions, he must have sensibly less magnificence, and personal difin- and which the great rank he weld bereftedness Even the defects and must have rendered only more pair faults, which might have appeared ful. L. B. on the other hand, could However, occasion,was taken had been by subordinate persons,

in his character, were rather of fer. vice to him, as they often tended to foften refentments, and helped to give that great power, of which he was possessed, an appearance less formidable.

During a great part of the late king's reign, his family had directed all things without controul. On the accession of his present majesty, his fituation feemed more doubtful, But in a little time he appeared outwardly as well established as ever, not only in his former high employments, but in that share of influence which is commonly supposed to attend it. There was, however, very little reality in this specious appearance; for he did not poffess the r- confidence, opon which all the effential of power depends. Neither his age, nor his fituation in the former reign, had allowed him the opportunity of cultivating an interest with the present K. Another noble person had been in an employment near his person; and having formed his mind with much attention and fuccess to those virtues which adorn his station, deserved and obtained a very uncommon hare of his confidence.

On

These principles soon produced their natural effect. In a short time the D. of N. thought himself obliged to refign, and May 26. L. B. became first commissioner of the treasury. refignation was followed by that of others of great confideration for their rank and influence. No one was furprifed at the ferment which

ensued; in which personal resentment, party violence, and national, or rather local prejudices, were all united, to throw every thing into

confusion.

In this condition of parties, a number of those called Whigs, who had loft their places, being highly irritated at the late changes, and even many of those who still continued in employments, being fuppoled attached to the interest of the D. of N. and therefore not to be depended on by the new adminifiration, it became necessary to have recourse to those called Tories, or

country gentlemen.

From the beginning of this reign it had been professed, with the general applause of all good men, to abolish those odious party distinctions, and to extend the royal fayour and protection equally to all his majesty's subjects. The persons

from thence to endeavour at the revival of this almost exploded dif-There were great heats, tinction. which were blown into a combustion by every art of, and every instrument of party, that had ever proved effectual upon fimilar occafions.

Whilst the nation was thus diftracted, the conduct of a war became difficult; its continuance unsafe; and its supplies uncertain. If the administration failed, their failure would be conftrued into incapacity; if they fucceeded, their fuccess would be converted into an argument for fuch terms of peace, as it would be impossible for them to procure. Above all, the ancient and known connection between the chiefs of the moneyed interest and the principal perfons in the opposition, must have been a subject of great anxiety to the administration.

These causes co-operated to render the intentions of the British miniftry towards peace altogether cordial and fincere; and they thought themselves abundantly justified in their wishes for it at this juncture, both from the fuccesses and the burthens of the nation; from the flourishing state of some of their allies, and the doubtful state of others; and in general, from those arguments of humanity, which made it high time that Europe should enjoy some in-

terval of repole.

Both courts thus concurring in the fame point, all difficulties were speedily smoothed. It is faid, that the first overtures were made under the mediation of his Sardinian macalled Tories had, befides, been jesty. As foon as terms were probefore active in support of some of posed, in order to give a pledge to those, who now clamoured at the each other of their mutual fincerity, very measures which they had hit was agreed that this treaty should themselves, more than once, adopt- not be negotiated, as the former ed. However, occasion was taken had been, by subordinate persons;

but that the two courts should reciprocally send to London and Verfailles a person of the first consequence and distinction in either kingdom. Accordingly the duke of Bedsord was sent to negotiate on the part of England, and the duke de Nivernois on that of France; the great outlines of the treaty were very soon explained and adjusted. The detail of some

articles took up more time.

During this mixed interval of war and treaty, the French obtained a temporary advantage; but which neither suspended nor influenced the negotiation. It was the last offentive effort, which they made; and though this enterprize was attended with a temporary fuccess in the execution, it was in the defign not superior to any of those that had failed. Monfieur de Ternay, with a fquadron of four men of war and a bomb ketch, and M. d' Hausonville, with a proportionable number of land forces, arrived the 24th of June at the bay of Bulls in Newfoundland, and finding the island little prepared to refift them, took without difficulty, the forts of St. John, Trinity, and Carbonear, destroyed the two last, and likewise the stages and implements of the fishery, to a confiderable value. The immense extent of our military operations, rendered it little

The French presumed by far too much on the supineness of the nation, when they hoped such an advantage could, have any great effect on the negotiation. In fact, as soon as the news arrived in England, a force was fitted out to retake those places. But such was the vigilance and readiness of general Amherst, our commander in America, that it super-

wonderful or blameable, that this

particular part was found weak.

feded the necessity of this armament He detached colonel Amherst with a body of forces, and lord Colville with a fmall, but sufficient squadron, to recover this valuable island. The land forces attacked some detachments of the French, advantageoufly posted in the neighbourhood of St. John's, and prepared to attack St. John's itself, with fo much vigour and activity, that M. d' Hausonville, who had remained there as governor, thought proper to deliver up that place, and furrender himself and gar-rison prisoners of war, Sept. 18. before lord Colville could arrive from the place where the troops had been landed, to co-operate with them. M. de Fernay escaped with the fleet, partly by having gained a confiderable diffance, before they were discovered, by means of a thick fog; and partly because ford Colville, after their having been discovered, did not apprehend that they really were the enemy's ships.

It was in Germany that the greatest efforts were made. Even after the negotiations had been confiderably advanced, the military operations were in that country no way flackened. The body under the marshals d'Estrees and Soubile, being streightened, in the manner we have seen, by the incomparable judgment of prince Ferdinand's measures, had been obliged to call that under the prince of Conde from the Lower Rhine to their alfistance. In order to complete their junction with this corps, the grand army uncovered Cassel, quitted the banks of the Fulda, and fell back to a confiderable diffance. The hereditary prince of Brunswick, who had attended this corps all along thought at length a fair opportunity

had occurred of striking a decifive Aug. 30. blow against it. With this aid he attacked, with his usual vivacity, that part of the French army, which was posted at a place called the heights of Johannisberg, near the banks of the Wetter. At first his fuccess was answerable to his own expectations, and the courage of his troops. He drove the enemy intirely from the high grounds into the plain; but whilft he purfued his advantage, the body he attacked was reinforced by the main army. The action, which began so fayourably for the allies, ended in a defeat. They lost above three thoufand men in killed, wounded, and The hereditary prince, priloners. who had, through the whole action, made the most powerful efforts, and exposed himself to the greatest dangers, received a wound from a nuket-ball in his hip-bone, from which his life was a long time loubtful, and his recovery lingerng and tedious. Whilst his life continued in danger, the concern was unusual, and common to both irmies; both taking an interest in the preservation of a prince, nuch endeared by his humanity, s admired for his valour and miliary genius.

A victory of the greatest importance could not have more fully hisplayed the superiority of prince ferdinand's capacity, in the conduct of a war, than his measures after this defeat. The French were not suffered to derive the smallest advantage from their victory; nor did the allies lose a foot of ground. The communication with Cassel was hill at the mercy of the allies. The french, in their retreat, had thrown garrison of ten thousand men into hat place; and the prince made Vol. V.

immediate and vigorous prepara-

When the prince had adjusted his army to cover the siege, the French took advantage of his movement for that purpose, to repass the Lahne near Giessen, and advanced towards Marpurg. But as they advanced, the prince drew his army from the siege, and made such dispositions as enabled him to fall at once upon their slank and rear, drove Sept. 26. them from all their posts, and obliged them once more to sly with precipitation behind the Lahne.

After this successful affair, the body of the army resumed their preparations for the siege of Cassel, which was now become the grand object of the campaign; and the great purpose of the endeavours of both armies was, of the one to open the communication with Cassel, of the other to cut it off.

A number of fkirmishes happened The most rein these movements. markable among them was Sept. 30. the affair of Bucker Muhl, not fo much for the consequences, which were not extraordinary, but for the uncommon steadiness of the two parties engaged. It was a post of some moment, the forcing of which would facilitate to the French the reduction of Amonebourg, a small fortress, but of importance, as it commanded a pass which led into the country which they pro-posed to enter. This post was nothing more than a bridge over the Ohme, defended by a light redoubt on one fide, and by a mill on the other. The allies had no cover, except the redoubt; nor the French, except the mill. The engagement began at first between two small bodies, and an artillery proportionably small; but as the action warmed, the artillery was gradually augmented, until it amounted to about five and twenty heavy cannon on a fide. The allies had originally but one hundred men in this post; but before the bufiness ended, seventeen complete battalions were engaged, who fuccessively relieved each other, after each detachment had made fixty discharges. The artillery fired at a distance of three hundred paces, and the mulquetry at thirty. Befides, the allied troops, as they passed to and from the redoubt, were, for a length of four hundred paces, exposed to all the enemy's cannon loaded with grape

The fituation of the French was nearly the same. A dreadful fire was supported between these resolute bodies, without a moment's intermission, or the least flackening honourable capitulation. And now on one fide or the other, for near prince Ferdinand might confide fifteen hours, from the dawn of day to dark night. Neither fide gave way; and this most bloody contest for a most trifling object in the end left the allies in the poffession of their redoubt, and the French of their mill. The whole compais of military history furnishes no instance of so obstinate a dispute. was no question but he would have The allies lost fix hundred men in killed and wounded; towards the close of the day, the dead bodies ferved to raise a parapet for the redoubt, in the place of that which had been beat to pieces by the cannonade.

The French are thought to have suffered more in this action than little to do towards completing the the allies. However, though they relief of our allies; except that the did not secceed in their attack fet the feal on their good fortune upon the bridge, they battered at and prevented their being expelle the same time the castle of Amonebourg with fo much fury, that in a short time they effected a breach, diftinguished by any great decisive

and obliged the garrifon to furren. der. By this advantage they gained a good deal of ground, and even got on the rear of the allied army, But with this advantage, confiderable as it was, they were able to do nothing decifive : they were able neither to raife, nor materially to diffurb the fiege of Cassel, which went on without interruption: nor were they able to throw the least relief into this place, where their garrison already began to foffer

The Best And State of the British

ictory, was not the less honourable damp was cast suddenly on their joy by the illness of lord Granby; who was attacked by a very dangerous, and long continued fever. It is impossible to express the concern of the whole army during this anxious interval, or the joy which enlivened every breast on his recovery. No commander had ever been more distinguished for an enterprising and generous courage; and none half fo much for an unlimited benevolence. The fick and wounded soldier, the officer whose income was unequal to his rank or his necessities, in him found a never failing and never burthenfome refource. Whatever could be done to animate the foldiery, to make them chearful in the service, to alleviate the hardships of war, was exerted beyond what could be thought possible in the limits of a private fortune; and the fatiffaction of the receiver went always beyond the actual benefit, because. in his greatest liberality, it was evident that he wished to do a thoufand times more. By his whole conduct he inspired foreigners with . a favourable idea of the English nobility. His character is, indeed, fuch as we are apt, in romantic ideas, fondly to conceive of our old English barons. It is with pleasure we attempt, however feebly, to do justice to the merit of those men, living or dead, who, in this memorable war, have contributed to raise this country to a pitch of glory, in which it has not been exceeded by any other in ancient or modern times. Future history will pay them a reward more adequate to their merits.

CHAP. XI.

Siege and surrender of Schweidnitz. War transferred to Saxony. Austrian defeated at Freyberg. Prussians rawage the Empire. Preliminaries peace between Great Britain and France. Disputes concerning that Mr. F. comes into administration. Preliminaries approved by parks ment. Peace of Hubertsbourg between Austria and Prussa. Condition.

WHILST the courts of London and Verfailles were making fo confiderable a progress towards peace, those of Vienna and Berlin seemed to remit nothing of their ancient animosity. The king of Prussia, deprived of the affishance, but at the same time freed from the hostilities of the Russians, directed his whole force and attention towards the single object of driving the Austrians out of Silesia.

Prince Henry, who commanded an Saxony, contented himself with acting upon the defensive. king in person carried on the fiege of Schweidnitz, almost in the presence of marshal Daun, who scarce made any attempt to relieve it. whatever deficiency there might have been in the spirit of the grand army of the Austrians, it was amply compensated by the obstinate bravery of the garrison, which refifted all the attacks of the Pruffians for near two months from the opening of the trenches. It is faid that the attack was conducted, and the defence made, by two engineers, who had written on the subject of the Attack and Defence of Places; and they were now practically engaged to prove the superiority of their several systems.

However this may be, Schweinitz cost the king of Prussia a gradeal of time, many laborious of forts, and a number of men. The brave garrison, to the number of eight thousand men, were at length obliged to surrender prisoners of war. Their fortune pursued them every when A great part of this body of gallat prisoners were drowned at a mouth of the Oder, on their passet to their intended confinement at so nigsberg: only nine men of a whole number escaped.

The king of Pruffia, now make of Schweidnitz, and consequent of Silesia, turned his attention of Saxony, where he considerably inforced his brother's army, a made preparations which indicate a design of laying steep to Dresde

In Saxony also the Australbegan to exert themselves of great spirit; and made some powers under the generals Stobband Haddick. They obtained on siderable advantages, in several a counters, over the army of print Henry; and even pushed them but to Freyberg; the possession of which place they prepared to dispute with the Prussians.

But here fortune, which has the

om proved long constant to their rms, intirely forfook them. The mited army of Imperialists and Austrians was attacked by Da. 29. prince Henry, (who took dvantage of the absence of geeral Haddick,) in the neighbourood of Freyberg, and totally routd. Great numbers were flain. The Pruffians took near fix thouand prisoners, among whom were bout two hundred and forty ofcers of all ranks, thirty pieces of annon, and feveral standards. The ictory was complete, and, as far regarded the event of the camaign, decifive.

The Austrians attributed this deat to the treachery of one of their perior officers, who was foon after ken into custody. But whilft they ere inquiring into the cause of eir disafter, and preparing to ans were pushing the advantages hich their victory afforded them ith all imaginable alacrity. And his they were enabled to do with he greatest effect, by means of a artial cessation of hostilities, which he Austrians were so imprudent as conclude with the king of Prussia or Silefia and the electoral Saxony ly, without foreseeing the danger, providing for the fafety, either of eirown immediate dominions, or those members of the Empire, hich were the most attached to their terefts, and which were now exoled to the attempts of a bold, raacious, and exasperated enemy.

One body of the Prussian army roke into Bohemia, pushed on aloff to the gates of Prague, and estroyed a capital magazine. Anoher fell upon the fame country on nother quarter, and laid the town f Egra almost in ashes, by a bombardment and a cannonade of red hot bullets. Some extended themselves all over Saxony; others penetrated into the furthest parts of Franconia, and even as far as Suabia, ravaging the country, exacting the most exorbitant contributions, and spreading difmay and confusion upon The Diet of the Emevery fide. pire fitting at Ratisbon did not not think themselves in safety; but were beginning to fly and preparing to remove their records.

The free city of Nuremberg, fo famous for the ingenious industry, and pacific disposition of its inhabitants, suffered the most by this invasion; having been obliged to pay contribution to the amount of two hundred thousand pounds of our money. It has been supposed, that in this expedition the Prussians raifed a fum equal to the annual fubfidy, which had formerly been paid by Great Britain to their fovereign. Many of the states found themselves obliged to fign a neutrality, in order to fave their territories from further ravages.

And now, a great part of the Empire being already included in the peace between Great Britain and France, and the rest, tied down by this neutrality, intirely difabled by the late defeat, or exhausted by the subsequent incursions, were no longer in a condition to furnish an army under the imperial name and authority. After the whole alliance had been thus gradually dissolved, the affair was, at length, left to be decided as it was begun, by the fingle arms of Austria and Prussia; so that there was great reason to hope, as the war in Germany had succeeded immediately to the rupture between Great Britain and France, the peace between

these powers would also lead to the speedy pacification of the Empire.

preliminaries had The figned by the British and French ministers at Fountainbleau, on the third of November, and it is necesfary for the completion of our defign, that we should here give some account of the definitive treaty

which was built upon them.

The reader will recollect that, in the negotiation of 1761, it was laid down as a principle by the two. courts, that their respective propofitions, in case the treaty should by any accident be broken off, were to be confidered as retracted or never made. At that time we remarked, that these propositions would pro-bably have their influence, notwithstanding this provision; because, as we then observed, things once fettled and agreed to, unavoidably flamp their own imprefion upon any future negotiation relative to the fame subject. It happened very nearly, as was then foreseen; for, as far as we can judge, the negotiation did not fet out upon any new or peculiar principle of its own, but feemed to affume as a bafis those points, which were nearest to an adjustment in the preceding treaty; and to commence where that transaction concluded.

The spirit of the two negotiations, fo far as regarded the peculiar interest of Great Britain, seems to have been perfectly similar. There was fcarcely any other difference, than that Great Britain, in consequence of her successes since that time, acquired more than the then demanded; but still the general idea, on which the acquired, was nearly or altogether the fame. But with regard to some of our allies, the principle was greatly varied;

and we imagine that this change was fufficiently justified by the alteration, which happened in the affairs of Germany, during the interval between the two treaties, Those who conducted the negotiation in 1761, were steady in rejecting every proposition, in which they were not left at liberty to aid the king of Prussia, with the whole force of Great Britain; those, who concluded the peace in 1762, paid less attention to the interest, though they did not wholly negled the fafety of that monarch. At the beginning of the year, and be fore they had entered into this negotiation, they refused to renew that article of the annual treaty, by which our court had engaged w conclude no peace without the king of Prussia; though at the same time they declared themselves willing to afust him with the usual subside. He on his part refused the fubble unconnected with that article Some coldness grew between the two courts from this time forward

The adjustment of affairs in the Empire, feemed to form no mate rial impediment to the progress the treaty. Both parties reading agreed to withdraw themselves to tally from the German war +. The thought, and rightly, that nothin could tend fo much to give peace ! their respective allies, as mutually to withdraw their affiftance from them and to stop that current of English and French money, which, as lost as it ran into Germany, would be fure to feed a perpetual war in that

country.

Circumstanced as affairs the were, this conduct on our fide as defenfible as the conduct which we held in 1761. At that timeth affairs of the king of Pruffia were

the lowest ebb; he was overpowered by the whole weight of Austria. of Sweden, of the Empire, and of Ruffia, as determined as ever in her enmity, and then fuccessful; to fay nothing of France. Neither gene-routy, nor perhaps found policy, ought to have permitted us to defert him in that fituation. But when the last treaty was made, the condition of his affairs was absolutely reverfed. He had got rid of the most powerful, and one of the most implacable of his enemies. He had concluded a peace with Sweden. The treaty itself freed him from all apprehensions of France. He had then none to conend with, but a nominal army of he Empire, and one of Austria, which though fomething more than minal, was wholly unable to optom being pitiable, was become prevent the ballance of Gerany from being overturned to is prejudice. It would have been he word in the world to overturn it a his favour

These principles sufficiently ex-plain and justify the different conof this nation, at these two mods, towards the king of Prus-The demand of the evacuaon of Wefel, Cleves, and Gueld-es, which had been made in the first regotiation, was then justly excepttd to, because we refused to put an end to the German war. In this aft the French agreed to it, and with reason, because we agreed in common with them to be neutral in the disputes of the Empire. And n these principles, the peace of Germany, so far as it depended on Great Britain and France, was restored. The rest of Europe was pacified by the stipulation for the evacuation of Portugal. This was, indeed, with regard to the contracting courts, the primary object.

What remained after the concerns of the allies were provided for, was the adjustment of what related to the fettlements and commerce of Great Britain and the Bourbon courts. The difficulty, which prevented this adjustment in the préceding negotiation, was the intervention of the claims of Spain. The attempt of the Bourbon powers to intermix and confound their affairs in the preceding negotiation, had a share in making the war more general; on this occasion it had a contrary effect. As the whole was now negotiated together, it facilitated the peace, by affording easier methods of adjusting the fystem of compensation, and furnishing more largely to the general fund of equivalents.

The great object, and the original cause of the war, had been the fettlement of limits in Ameri-This was therefore the first object to be attended to in the treaty. And it must be observed, that this point was much more accurately, as well as beneficially, settled, than it promised to be in the negotiation of the foregoing year. For the French, not having ascertained the bounds between their own feveral possessions with greater exactness, than they had those between their possessions and ours, it was not clear in ceding Canada, how much they ceded to us. Disputes might have arisen, and did indeed immediately arise upon this subject. Befides, the western limits of our southern continental colonies, not mentioned. And those limits were extremely obscure and subject to many discussions. Such [E] 4 dif-

Bet treasant me

Def. trea. art. xxi.

discussions contained in them the feeds of a new war. In the last treaty it was agreed, that a line drawn along the middle of the river Missippi, from its source to the river Iberville, (a small but navigable branch of the Missippi,) and thence along the middle of this river, and the lakes of Maurepas and Pontchartrain, (which lakes communicate with both rivers) to the sea, should be the bounds of the two nations in North America.

Nothing could be more diffinct than this boundary. It gave us, in addition to what was properly Canada, a very large tract of territory, which the French used to include under the name of Louisiana; to which our claims were never clearly ascertained, and much less established by any possession. The French have had for a long time forts and settlements in that country; whereas the English never had either the one or the other; and this is a consideration of no small moment in a contest concerning rights in a country such as America.

What added also to the rounding of our territories, and cutting off the occasions of limitary disputes, was the cession of Florida on the part of Spaint. This country indeed makes no great figure in the commercial world; and cannot be therefore put in competition with the other conquests. But from the situation of its harbours of Pensacola and Mobile, it affords some advantages in time of peace, and very considerable ones in time of war; by connecting our future fettlements on the Mississipi with those upon the Atlantick ocean, and by enabling us greatly to distress, if not wholly to destroy the trade of the Spaniards in case of a rupture with them.

The navigation of the Miffiffipi was made common to both nations |

By the treaty of Utrecht, which fettled our northern limits, and by this treaty which afcertained those to the west, our possessions in America are as well defined, as themture of fuch a country can possibly admit. They comprehend in their extent the foundation of a vast empire; they have many advantages of foil and climate; and many of intercourse and communication, by the number of noble lakes and mevigable rivers, with which that part of the world abounds. These circumstances afford, though a distant, a fair prospect of commerce to Great Britain, when this immense country comes to be fully peopled, and properly cultivated. Some advantage also we derive from this possession, that are not only confiderable but immediate; among the principald which must be reckoned, the monepoly of the fur and peltry trade of North America, much the greater trade of that kind in the world, and which is now, we may fay, entirely in our hands. Befides the possession of Canada enlarged the fphere of our fishery, and took from the French a opportunity of trade, which she might employ greatly to our detriment.

Such are the advantages fairly, and without any exaggeration, for which we are indebted to this part of the treaty, in which the interests of Great Britain were well weighed and folidly provided for.

The next point we shall consider, is the arrangement made concerning the Newsoundland fishery. This was a point of infinite importance, and a subject of much controvery. In a commercial view it is certainly of great estimation. But it has been considered as even more material in

Def. tr. art. vii. 1 Def. tr. art. xx. | Def. tr. art. vii

knows that these extensive fisheries are the life of many maritime places, which would otherwise be of no fort of value; that they are the great nurseries of seamen, and confequently the great resources of the marine. Scarce any object could be of more importance to two nations, who contended for a superiority in naval power.

t. VIII

The more clearly therefore it was the interest of Great Britain, to acquire the exclusive exercise of this sistery, the more strongly and evidently it became the interest of France, to oppose themselves to such a pretension. Not only a large part of her foreign trade depended on this sishery; but a great part of her domestic supply. Besides, every hope of the strength and almost of the existence, of a naval power, must vanish with the cestion of this sishery.

The English administration probably saw, that France would rather run all the hazards of war, than totally relinquish this object. Since therefore they despaired of driving the French entirely from the silhery, they endeavoured as much as possible to diminish its valie to them. In this respect they followed the plan of the former negonation, except that some im-

provements were added.

In the first place, that article of the treaty of Utrecht was established, by which the French were admitted to fish and to dry their fish, on the north-east and north-west parts of Newsoundland, from Cape Bonavista to Point Biche, and excluded from the rest of this island t. They were also permitted to fish within the Gulph of St. Lawrence, but with this limitation; that they

fhall not approach within three leagues of any of the coasts belong-

ing to England.

This precaution was taken, not only with a view of abridging the French fishery of dry cod, but principally in order to prevent their landing, and on that pretence forming settlements on those extensive desarts, which surround the gulph of St. Lawrence. Otherwise this privilege might become a means of exciting new controversies between the two nations.

In compensation for the cession of the isles of Cape Breton and St. John to England, we agreed to furrender to France the small islands of St. Pierre and Miquelon, fituated to the fouth of Newfoundland . The cession of the two former islands was. unquestionably, more than an equivalent for the two latter, though the latter are by no means either incomodiously fituated or ill circumstanced for carrying on the fishery. The French stipulated to erect no fortifications on these illands, nor to keep more than fifty foldiers to enforce the police. In this instance the plan of the former negotiation was purfued. The ideas of a refident commissary, and the occafional visitation by a ship of war were omitted; as regulations, which were in truth more humiliating to France, than in any respect advantageous to our interest.

This fishery was, as it had been at the treaty of Utrecht, divided between France and England, but with less equality on this than on that occasion. The French are not wholly deprived of their share; but this share is considerably impaired. Their loss of Cape Breton does not appear to be fully supplied by St. Pierre and Miquelon.

The

The confiderable and growing fiftery, which the French had fettled at Gaspe is taken away without hope of recovery. On the whole, we are thus circumstanced; we have advantages in this fiftery, which we may certainly improve to a great superiority; but we have still a rival, which makes it necessary to exert ourselves with unremitting industry in order to secure it.

With regard to Spain, she entirely defifted from the right she claimed of sishing on these coasts +. A more satisfactory expression could have been wished; if it had been of great importance, in what terms a right was renounced, which for a long time had never been exer-

cifed.

When the affairs, of the West Indies came to be fettled, though they caused great difference of opinion among the public, they do not feem to have raifed any great difficulty in the pegotiation. We had here made great conquests, and here also we nade great concessions. We coded the Havannah, with a confiderable part of the island of Cuba; the flands of Martinico; Guadelonpe; Marygalante; Defirade; and Santa Lucia. We retained in our hands the islands of Tobago, Dominica, St. Vincent, and the Grenades *. To the three former, of which (as well as to Santa Lucia, which we forrendered), we had an old claim. The last only was a new acquisition; and the three others are at prefent of fmall value.

Many confused with great vehemence and afperity this part of the treaty. They insisted that in thistreaty we had lost fight of that great fundamental principle, that France is chiefly, if not folely, to be dreaded by as in the light of a maritime and commercial power. That therefore w we had, by refloring to her all her valuable West India islands, and by our concessions in the Newfoundland finery, deft in her hands the means of recovering her prodigious dosses, and of becoming once more formidable to u at fea. That the fiftery trained w an innumerable multicude of young feamen; and that the West India trade employed them when they were trained. That France had long fince gained a decided superior rity over us in this lucrative branch of commerce, and supplied almost all Europe with the rich commodities, which are produced only is that part of the world. By the commerce, faid they, the enriched her merchants, and augmented her finances; whilft from a want of ligar land, which has been long known and feverely felt by England, we at once loft the foreign trade, and fuffered all the inconveniencies of a monopoly at home

That, at the close of to expensive a war, we might very reasonably demand fomething towards our indemnification, as well as towards our fecurity. It is evident, fail they, that our conquests in North America, however they may provide for the one, are altogether inade quate to the other of these ends. The flate of the existing trade of theleconquefts is extremely low; the speculations of their future are precarious, and the prospect, at the very bell very remote. We stand in need of supplies, which will have an effect, certain, speedy, and considerable. The retaining both or even one of the confiderable French islands, Martinicom Guadeloupe, will, and nothing elle can effectually, answer this triple putpose. The advantage is immediate.

⁺ Def. tr. art. xiii.

^{*} Def. tr. art. viii. ix, & xix.

It is a matter not of conjecture but of account. The trade with thefe conquests is of the most lucrative nature, and of the most considerble extent; the number of fhips employed by it are a great resource to our maritime power; the monopoly at home is corrected, and the foreign trade is recovered. And, what is of equal weight, all that we gain on this fystem, is made fourfold to us by the loss which enfues to France. But our conquests in North America, however advantageous they may prove to us, in the idea of fecurity, (for in that respect alone they are of any moment,) are of very little detriment to the commerce of France. On the West Indian scheme efacquifition, our gain and her lofs go hand in hand, The a manhand too

li eix. They infifted upon the obvious connection of this trade, with that of our colonies in North America, and with our commerce to the coast of Africa. The African trade, said they, will be augmented, by the demand for share. That of North America will all center in our selves. Whereas if the islands are all restored, a great part of the benefit of the northern colony trade must redound, as it has hitherto done, to those who were lately our enemies, and will always be our rivals.

They observed, that there was nothing extravagant of overbearing in this demand. That though we should retain either Martinico or Guadaloupe, or even both these islands, our conquests were such, that there was still abundant matter left to display our moderation in the cession of the rest. To say nothing of our many concessions in the fishery; on the coast of Africa; and in the East Indies; from all which great provinces of commerce the French had.

been entirely driven in this war, and to a confiderable share of which they were restored by the treaty. But if further concessions must be made (for which however they saw no necessity) let the prodigious demand in North America be somewhat contracted; by this method we lose nothing to our commerce; and we do not hazard our security, as we shall still be infinitely superior in strength; and whenever a war breaks out, that power will be most secure, whose resources are most considerable.

Such are concifely, and, we flatter ourfelves, fairly, the principal heads of argument, brought by the best writers upon this side of the question; they were replied to by the best writers on the other, upon the following principles.

That the original object of the war was the fecurity of our colonies upon the continent; that the danger to which these colonies were exposed, and, in consequence of that danger, the immense waste of blood and treasure which ensued to Great Britain, together with the calamities, which were, from the fame fource. derived upon the four quarters of the world, left no fort of doubt that it was not only our best, but our only policy, to guard against all possibility of the return of fuch evils. Experience has shewn us, that while France possesses any single place in America, from whence the may molest our fertlements, they can never enjoy any repose, and of course that we are never fecure from being plunged again into those calamities, from which we have at length, and with so much difficulty, happily emerged. To remove France from our neighbourhood in America, or to contract her power within the narrowest limits possible, is therefore the most capital advantage we can obtain; and is worth purchasing

by almost any concessions.

They infifted that the absolute fecurity derived from this plan, included in itself an indemnification. First; by faving us, more effectually than any other method could, from the necessity of another war, and confequently by giving us an opportunity of increasing our trade, and lowering our debt. Secondly; by permitting our colonies on the continent to extend themselves without danger or moleflation. They shewed the great increase of population in those colonies within a few years. They shewed that their trade with the mother country had uniformly increased with this population. That being now freed from the molestation of enemies, and the emulation of rivals, unlimited in their possessions, and fafe in their persons, our American planters would, by the very course of their natural propagation in a very short time, furnish out a demand of our manufactures, as large as all the working hands of Great Britain could possibly supply. That there was therefore no reason to dread that want of trade, which their adversaries infinuated, fince North America alone would supply the deficiencies of our trade in every other part of the world.

They expatiated on the great variety of climates, which that country contained, and the valid resources which would thence arise to commerce. That the value of our conquests thereby ought not to be estimated by the present produce, but by their probable increase. Neither ought the value of any country to be solely

tried on its commercial advantages; that extent of territory and a number of subjects, are matters of as much confideration to a flate attentive to the fources of real grandeur, as the mere advantages of traffic; that fuch ideas are rather fuitable to a limited and petty commonwealth, like Holland, than to a great, powerful and warlike nation. That on these principles, having made very large demands in North America, it was necessary to relax in other parts. That France would never be brought to any confiderable ceffion in the West Indies: but that her power and increase there could never become formidable, because the existence of her settle ments depended upon ours in North America, the not being any long er left a place from whence they can be supplied with provisions; that in losing something of the sugar trade, we loft very little elfe than a luxury; as to the other produce of the West Indies, it might be in a great meafure, and in part already was fupplied by our possessions on the continent, which daily increased not only in the quantity but in the kind of its produce.

We do not pretend to pass any judgment on the merits of the several fides of this question, which is certainly a very difficult one. We relate opinions, as well as facts,

historically.

The only point, which remained to be adjusted in the West Indies, was the logwood trade. Spain confented not to disturb the English is their occupation of cutting logwood in the bay of Honduras, and to permit them to occupy such buildings as may be necessary for them in this occupation. Great Britain, on her side, stipulated to destroy the fortifications

that bay".

fications

By this article the English acquired a folid right in this long contested trade; but feemed, at the fame time, to lose all the means of protecting it. It is, how ever, difficult to point out a better method of adjusting a claim of fuch a peculiar nature. The right we claimed was not a right to the territory, nor directly to the produce; but only a privilege of cutting and taking away this wood by indulgence. To have infifted on the right of erecting fortifications, would have been making the strongest claim to an absolute, direct and exclusive dominion over the territory itself; a point, to which I do not find that our most extenfive claims have ever been carried.

In Africa, Goree was restored to France, and Senegal remained to Great Britain +. This regulation feems to have divided the trade on this river, and the adjacent coast, between the two nations. The Englift, as they are now circumftanced on that part, feem to be the most advantageously situated for the trade in time of peace; and the French for carrying away the whole of it in

time of war.

With regard to the East Indies, all the French factories and fettlements are restored to that nation in every part of Indiat. Although this must be regarded as a very great concession, it does not however afford all those advantages to France, which might be imagined at the first view. First, because the fortifications erected at fuch a vast expence in all those settlements have been totally defiroyed; and it cannot be expected, in the present situation of the French company, that they can,

fications which had been erected on in the course of many years, if at all, be restored to their former state. In Bengal, (including, by an explanation annexed to the definitive treaty, the kingdom of Orixa,) they have engaged to erect no kind of fortification, nor to keep any number of foldiers whatfoever. Secondly, they have agreed to acknowledge the present reigning subas of Bengal, Decan, and the Carnatick, as the lawful fovereigns of these countries. These princes are the greatest on the peninsula of India: they are in our interest, and most of them owe either the acquifition, or depend for the prefervation of their power on our arms; by which means our company is become, in effect, arbiter of the commerce and politics of that great and opulent coast, extending from the Ganges to Cape Comorin; and in 2 great degree also of the other, from the fame cape to the mouth of the Indus. Thirdly, during the course of our fuccesses, the traders and the manufacturers have removed from the French to our fettlements, where they will have at least an equal market, and a superior protection; and it will be difficult, if not impossible, to bring them back.

Minorca and Belleifle were to be restored to their former possessors H. The fortifications and harbour of Dunkirk were to be demolished agreeable to the stipulations of for-

mer treaties. X

This is the general outline of the late treaty. Those who chuse a more minute information, will recur to the treaty itself, which is printed among the state papers. The particulars given here will ferve to point out the spirit and the general effect of that transaction, which has ad or estruction was to sbeen

‡ Def. tr. art. xi. † Def. tr. art. ix. × Def. tr. art. xiii.

Def. tr. art. xviii. Def. tr. art. viii. and xii.

been the subject of so much heat and controverfy; and which nothing but adulation will affert to be free from defect, nor any thing but faction can deny to be productive of many very great and effential ad-

vantages to this kingdom.

This treaty, while it remained in agitation, formed a great crifis, not only in the affairs of the nation, but in the fortune of the new miniftry. Towards the latter end of the fummer, Mr. F. was called in, and engaged in their support. Though he continued in his old place of paymatter, he undertook to conduct the affairs of government in the bouse of commons. Mr. Gr. whose employment would naturally have engaged him in that talk, refigned the feals of fecretary of state, and was appointed first lord of the admiralty. The great experienceand known parliamentary abilities of Mr. F. feemed to give new life to the affairs of the administration. A more vigorous and determined conduct was from that time adopted. Many of those, who were not perfectly attached to the new fystem, were immediately removed from their employments; and measures were taken to clear every department of every friend of the D. of N.

The spirit of these proceedings feemed to augment that of the opposition. It was apprehended, that the preliminaries would undergo a rigorous scrutiny, and might possibly incur a heavy censure from parliament. The terms of peace peace were criticifed without mercy. They were declared to be inglorious, inadequate, and unfecure; unequal to the great successes of the was evident, that, when the question war, and below the just expecta- came on, the discontented party was tions of the nation; that our com- found not very well united, and sh. merce was neglected, and our ailies folutely unprovided of any regular

tioned majority.

Many causes concurred to produce this moderate disposition. First a very great number, which included almost all the Tories, were engaged in the support of the administration. The then chiefs of the opposition were not well agreed among themselves. Mr. P. who was confidered as a party in himfelf, had not joined with the D. of N. nor feemed disposed to act with any particular body. The same general plan of peace, which many now in the opposition had formerly approved, had been adopted in the preliminaries, and evidently improve ed. It is true, it had been objected that our additional fucceffes, fince that time, gave us ground to expect better terms; but it was answered, that our national burthens, and the extent of the war, had increased in at least, an equal proportion; and that peace was become necessary to the nation.

These arguments, whatever weight they might have in themfelves, were firong against their, upon whom they were rather retorted, than for the first time le velled, being altogether agreeable to the fystem which many now m opposition had always pursued, and to the fentiments many of them had publicly avowed, and perhaps fill fecretly retained. On the whole, it 12 1 1 by basedater fehem!

neme of opposition. However, ough baffled on this occasion, it since begun to revive and to unite; d though peace is happily restored ith foreign powers, our domestic iet is still far from being securely ablished.

With regard to the powers in ermany, the peace between Engnd and France, and the superiority the king of Prussia at the close the campaign, inspired at length, d unwillingly, a disposition to ace. Conferences were opened at ubertiburg, and a treaty concluded tween his Prussian majesty and the ppress queen. As affairs in this eaty were speedily adjusted, so ey may be very concisely relat-The substance of it was no pre than that a mutual restitution doblivion should take place, and ch party fit down at the end of the er in the fame fituation in which ey began it. There has been k of a secret article, which profed some kind of indemnification the king of Poland; but of this ere is nothing of certainty. The ng of Prussia, after having for fix ars contended against the efforts almost all the great powers of rope, by whose enmity he could affected, having stood proof ainst the most terrible blows of tune, enjoys at length the full ward of his uncommon magnamity. He retains his dominions their utmost extent; and having livered his country, by his incomrable talents for war, he now ens leisure to recover it by his no s admirable talents for governent. Scarcely was the war conided, when he began to display attention to domestic policy, and care for the happiness of his ople. He immediately distributed ads to his disbanded soldiery; and

gave them the horses of his artillery to aid them in their cultivation.

Europe is now pacified; and she begins to respire, after a more general and a more bloody war than any the world had experienced fince that which was concluded by the peace of Westphalia. As far as it is fafe to judge concerning a system which is subject to so great and unforeseen variations, and sometimes from very flight causes, this peace promifes a confiderable duration. The king of Pruffia will hardly again commit his affairs, fo miraculoufly retrieved to the chances of war. He fees how dearly he has a second time purchased his conquest of Silesia, and he will hardly aim at new acquisitions. The emprefs, fince the failed to reduce Silefia, or even to recover the smallest particle of her losses, with fuch an exertion of her own strength, and with fuch an alliance as never was feen united before, and with which the can never flatter herself again, must be convinced how vain it is to attempt any change in the prefent system of Germany.

Whilst Russia remains circumstanced as she seems to be at present, there is a very good profpect for the tranquillity of the North.

France has turned her thoughts to a much wanted œconomy, and the re-establishment of her marine. She has reduced her land forces by above one half. England, without lessening the ordinary establishment of her navy, has augmented her military, in confequence of the extent of her conquells. Both nations feem sensible of the necessity of being prepared, and yet quiet: The Bourbon courts are united, but weakened. The mutual jealousy of the nations, which have been lately at war, continues; but

their subjects of dispute, and occafions of animosity, are much lessened. This is as good a situation as could reasonably be expected.

We have thus, in fome measure, accomplished our defign of laying before the public an annual connected narrative of the events of the late most remarkable war; which we have pursued from its com-

Method to discover alum in bread.

Mix chalk with aqua-fortis; pour them upon water in which the fuspected bread has been infused, and well foaked: if there be any aluminous acid, it will appear evidently foon after the mixture by a gypseous or chalky concretion, forming a hard mass at the bottom of the veffel.

His majesty this day made the usual offering at the chapel-royal of gold, myrrh, and frankincense; but there was no playing at hazard, nor any ball at night.

A letter to a nobleman from lieutenant colonel Elliot, who was miraculoufly preserved, after being shipwrecked on the Island of Sable.

> Halifax, in Nova Scotia, May 9, 1761.

" My Lord,

" Soon after I did myfelf the honour of writing to you last Sep-tember, I was ordered with a party to the bay Chaleur, to fee the French troops there comply with the articles of capitulation made at Montreal, and from thence was to join general Amherst at New York, where I proposed spending the winter. This induced me to take Mrs. Elliot along with me, which has led her into such distresses, that your lordship's humanity will more easily

• For those taken during the first nine months, see our last volume, p. 161. VOL. V. [F]con.

conceive than I can paint. A few days after we failed from Chaleur, after a very great florm, we fruck on the island of Sable, (about forty leagues to the eastward of this place) an ifland barren and uninhabited, with neither a flick of wood upon it, a stone, or a spot of earth, but one intire bank of fand. After we ftruck, the 15th of November, we were eight-and-forty hours before we durft venture on shore, the sea ing fo very high; though, at the ame time, we expected our veffel to fall to pieces every moment, our whole employ was toffing over board ach provisions as we could come at, for our future sustenance, in case we were any of us lucky enough to get on shore, which I began to despair of, as the only boat we had was loft in returning to the veffel, after landing a man on shore to fix s rope: in doing this, two failors were drowned; however, it was the prefervation of the rest of our lives; for, finding it impeffible to flay any longer on board, we fastened an empty barrel to this rope, and fo, one by one, were drawn through a very great furf (for near the space of fourscore yards) on shore, without the loss even of one man of my party; and Providence was pleased even to preferve two little infants that were on board, the one brought on shore upon the father's back, and the other on its mother's. continued eight-and-forty hours more in our wet clothes upon the fand, without any thing to cover us: at laft, we picked up some sails, and next day luckily found the officer's tent that was with me. Much more provisions was drove upon the illand than expected; but the winter being fo far advanced, did not expect to fee a veffel till May, the time fishermen go upon that could therefore proportioned my allow ance of provisions for that time, and all that we seventy persons he to live upon, was four ounces of sour a-day for each, with one glo of rum, or wine; and four pound of pork between fix, for seven day.

From this pinching allowance we were agreeably relieved by the fight of bories, which we thot; and for after we discovered horned cattle we now got more fails and yards of the veffel, with which we cred ourselves houses, and thatched the with a long fedge that grows then Notwithstanding I had given up hopes of relief, we frequently veffels, who likewife faw us; but was too dangerous for them to a tempt any thing for our prefer tion: however, they carried a repa to Boston of people's being win ed here; and some people bei missing from a fishing town a that place, they fent a small ve in fearch of them, which arm the 8th of January: fhe could to on board but a few men. Shen turned again to me the 18th, 1 the 20th we all arrived here a naked as beggars; Mrs. Elliot at myself, and my lieutenant Dalm lofing all our baggage."

Thus stands the law as to marages in the kirk of Scotland.

And by the act 10 Ann. ch. 7. or tolerating episcopal meetingoules in Scotland, the episcopal inisters, ordained by a protestant shop, are allowed to preach, to dminister the sacraments, and to arry. But it is provided, that no siscopal minister, or ministers, reding within that part of the united ingdom called Scotland, prefume marry any person, or persons, at those whose bans have been by published three several Lord's ys in the episcopal congregation hich the two parties frequent, and the churches to which they belong parishioners, by virtue of their fidence, and upon the fame pains punishments as are already infled by the laws of Scotland, in les of clandestine marriage; and e ministers of the parish churches thereby obliged to publish the d bans; and, in case of neglect or fusal, it shall be sufficient to pubh the said bans in any episcopal ingregation alone.

From hence it appears, that no arriage can be lawfully had in the lablished church of Scotland, but y publishing the bans three times; and in the episcopal meeting-houses to publication must be on three

Lord's days, and in the episcopal congregations, which the two par-

ties frequent. Now most, if not all, the marriages had in Scotland, by persons going down from England, to evade the marriage-act, have been celebrated (as I am credibly informed) in the episcopal meeting-houses, and that without the publication of the bans on three Lord's days, and certainly not between parties frequenting that episcopal congregation, fo that there can be no doubt but these marriages are irregular and clandestine. And what an unhappy fituation must the parties to fuch marriages be in, or their issue, if, when the validity of these marriages come to be litigated in England, they should be deemed invalid, as not being had in pursuance of the laws in that country where they were celebrated.

It is to be hoped, indeed, that these marriages will be allowed good, as were the Fleet-marriages, tho' very irregular ones; but what persons of common prudence would run any hazard at all on such an occasion?

Ended the sessions at the Old Bailey, at which two received sentence of death, one of whom was, a few days after, executed; sixteen received sentence of transportation for seven years, and one for sourteen, who was the same day pardoned by his majesty; three were burnt in the hand, and one whipped.

As Mr. Taylor, jun. anchorfmith at Limehouse, was putting some old iron into the fire, the barrel of an old pistol happened to

be

[F] 2

[†] A kirk session is the lowest ecclesiastical court, or parish consistory, which composed of the minister, or ministers, if more than one in the parish, and a elders and deacon, with a clerk or headle.

be in the parcel, which, being loaded, in a little time went off, and unfortunately shot him dead. -We mention accidents of this kind from time to time, to put

people on their guard.

One of the French king's guards, who had given himself several wounds in the belly, and pretended that he had received them from two affaffins, who would have forced their passage into the royal presence, in hopes of being promoted for his zeal and diligence, was lately hanged at Paris .- It was this affair gave rife to a late report, concerning a fresh attempt on the French king's life.

A Swede has invented a machine for threshing corn, by which two men can do the work of 16; a machine much wanted in England

at this juncture.

The king went to the 19th. house of peers, and made a speech, on occasion of his majesty's having declared war against Spain, which speech, with his majesty's answers to the addresses of both houses, the reader may see in our laft, Vol. IV. p. [303].

Extract of a letter from Basque Road, dated Dec. 26, 1761.

"Three fire-boats, of 50 tons each, were lately fet on float, under the command of the captain of the port's fon, affifted by four men of war's boats; but through precipitation, mistake, or accident, two of them blew up, and every foul perished. The explosion was terrible; they continued burning with great fury from one till day-light. As the wind blew when they took fire, they were in the stream of the Princess Amelia, an 80 gun ship, commanded by capt. Montague; but providentially the wind shifted from

W. to N. W. and drove them clear of the whole squadron. They were chained together; and if they had been managed with that coolnels and intrepidity, which fuch an enterprize requires, they might have done fatal execution. The Breft fquadron, which has three battalion on board, are ready to fail; and four large transports are gone from Bourdeaux full of troops.

th. An old man standing at the fire-side of the 3 per cent. slice at the Bank, was observed to sick up the coals and put them in in pocket; and afterwards went to he books and received his dividend pon 600 l. stock. He was carried after a magistrate, where the coals were taken out of his pocket; but y reason of his age, and his extense penitence, he was released.

An extraordinary instance of avaice and peculation has lately been incovered in France. Monf. Fofe, one of the farmers-general of province of Languedoc, who ad amassed considerable wealth by inding the faces of the poor withhis province, and every other eans, however low, base, or cruel, which he rendered himself unierfally hated, was one day ordered the government to raise a confierable fum : upon which; as an scule for not complying with the emand, he pleaded extreme poerty; but fearing left some of the habitants of Languedoc should ive information to the contrary, tichis house should be searched, 1 Act - 10 paran Bras goung to

he resolved on hiding his treasure in fuch a manner, as to escape the most strict examination. He dug a kind of a cave in his wine cellar. which he made so large and deep, that he used to go down to it with a ladder; at the entrance was a door with a spring lock on it, which on shutting would fasten of itself. Very lately monf. Foscue was misfing; diligent fearch was made after him in every place; the ponds were drawn, and every method, which human imagination could fuggest, was taken for finding him, but all in vain. In a short time after his house was fold, and the purchaser beginning either to rebuild it, or make fome alterations in it, the workmen discovered a door in the cellar, with a key in the lock, which he ordered to be opened, and on going down they found monf. Foscue lying dead on the ground, with a candleftick near him, but no candle in it, which he had eat; and on fearching farther. they found the vast wealth that he had amassed. It is supposed, that when monf. Foscue went into his cave, the door by fome accident thut after him; and being out of the call of any person, he perished for want of food. He had gnawed the flesh of both his arms, as is supposed, for subsistence. Thus did this mifer die in the midst of his treasure, to the scandal of himself, and to the prejudice of the flate.

His majesty went to the house of peers, and gave his affent, to—An act for raising by annuities, in manner therein mentioned, the sum of twelve millions, to be charged on the finking fund, &c. &c.—An act for granting to his majesty several rates and duties

nopu

[F] 3

upon windows or lights,—An act for enabling his majesty to raise a certain sum of money towards paying off, and discharging the debt of the navy, &c.—An act for charging certain annuities granted in the year 1760, on the sinking sund, &c. &c.—And to two private bills.

According to the above act, every house containing eight windows or lights will now pay 11 s. for nine, 12 s. for ten, 13 s. for eleven, 14 s. for twelve, 11. 1s. for thirteen, 11. 23. 6d. for fourteen, tl. 4s. for fifteen, Il. c s. 6d. for fixteen, 1 1. 7 s. for feventeen, 1 1. 8 s. 6 d. for eighteen, Il. 10 s. for nineteen, 11. 11 s. 6 d. and for twenty and upwards the fame as before, viz. 1 s. 6d, per window, and 3 s. the house; and all houses or cottages, that have no more than feven windows, to pay 3 s. for the house, unless on account of their poverty excused from parish rates; but no houses, having more than than feven windows, are to be exempted from this tax upon that account.-As many persons have, and will alter the number of their windows. on account of the additional duty, it may not be improper for them to know, that the act of parliament directs, that no window, or light, will be deemed to be stopped up. unless it be stopped with brick or stone, or plaister upon lath, or with the same materials of which the outfide of the house doth chiefly confift; and the furveyors in their respective divisions have express orders from the board of taxes, to charge all windows that are not stopped up according to the directions of the act.

on this and the following day, great damage was done, and numbers of people pe-

rished, in different parts of the king. dom, by a great, sudden, and us usual fall of snow, which, in some places, was ten and twelve feet deep. Near fifty people, who were caught in the open fields, roads plains, heaths, and commons, lot their lives. In the hurricane that accompanied it, large trees, coache, houses, chimnies, and barns, were, in many places, levelled with the ground, and churches damaged many sheep and cattle likewise perished. It is said, however, that a farmer at Water-on-the-Wolds, is Yorkshire, recovered ten shep hearty and well out of the fnow, if ter they had lain there about for weeks. In fhort, at land, and or the fea coasts, such devastation a not remembered, by the prefet race, in England.

A little girl, daughter to M. Giffard, late of Covent-Garda theatre, was lately burnt in a very shocking manner, and died in great agonies. A person in the house was subject to fits, and amongs the methods practised to recover her, it was usual to burn feathers, rage, papers, &c. under her nose—the striking the child, she was supposing her doll in the like circumstances, and burning something under its nose, by which means at own cloaths caught fire, whilst her mamma's back was turned.

From Faulkner's Dublin Journal. Whereas a lady, who called herfelf a native of Ireland, was in England in the year 1740, and refided fome time at a certain village near Bath, where the was delivered of fon, whom the left with a fum of money, under the care of a perform in the fame parish, and promised a fetch him at a certain age, but he not since been heard of; now this

is to defire the lady, if living, and is should be so fortunate as to be en by her, to fend a letter directed to I. E. to be left at the Chapter Coffee house, St. Paul's churchand, London, wherein she is deired to give an account of herfelf. and her regions for concealing this fair or, if the lady should be dead, and any person is privy to the affair, they are likewife defired to direct as above .- N. B. This evertifement is published by the person himself, not from motives of eceffity, or to court any affiftance being, by a feries of happy ciremstances, possessed of an easy and dependent fortune) but with a eal defire to know his origin .-S. The firidest fecrecy may be depended upon.

In the evening, in the midf of a great shower of all and snow, with the wind at with four loud claps of thunder one heard at Valenciennes in snace, preceded by very frightful intening, by the violence of which the wood work of St. Gray's thurch was set on fire; and fix a series of the workmen, sent to attinguish the slames, were so teribly scorched by a succeeding stash, but it is scarce possible they should stover.

Ended the fessions at the Old-Bailey, which proved a miden one, when two persons were randed, and fixteen received sentence of transportation for seven can.

There has lately been fet on foot in the diocese of Peterborough, under the suspices of the bishop, a fund, by voluntary subscription, for the clief of widows and orphans of sor clergymen, and for the necession clergy of that diocese. At a

meeting they agreed, that no clergyman be permitted to subscribe annually more than one guinea for each benefice he shall hold, nor less than five shillings.

The marine fociety have collected, equipped, and cloathed, for the sea service, 5452 men, 4511 boys, in all 9963. This shews the utility of that noble institution.

The right hon, the earl of Buckinghamshire, for the encouragement of matrimony, proposes to give an annual bounty of ten guineas, to five young women, daughters of freemen of Norwich, upon their marriage to the sons of freemen, on the following terms:

They must not be above 25, nor

under 18 years of age.

The persons they marry must be industrious freemen of Norwich, resident there, and sons of freemen resident, and their age not above 31, nor under 21.

No persons who have received collection, or who are deformed in their persons, subject to fits, in general unhealthy, or in whose family there is any suspicion of madness, can be entitled to this charity.

The candidates must be recommended by ladies or gentlemen of credit, resident in Norwich, who, from their own knowledge, will vouch for their characters; and also that they have good reason to believe neither of them have contracted any debts, or are liable to any of the above objections.

The marriages are to be celebrated on the 1st day of July yearly, and to commence upon the 1st day of July next; upon which day the new-married couples are to dine together, and his lordship will allow one guinea for the dinner. It is

[F] 4 expected

expected that the couples fixed upon midnight three men actually to will, fome days previous to the marriage, fignify to the persons who may recommend them, how best it may be laid out for their advantage, except one guinea, which will be paid the day after the wedding.

On occasion of two young children lately poisoned by taking bearsfoot, for the worms, at Fisherton, near Salisbury, the following caution has been published, in the St. James's Chronicle.

To prevent the defroction of more children, please to inform the public, there are two kinds of bears-foot in England. One is a plant of two feet high, with dark leaves, and a multitude of whitish flowers, somerimes a little purpled at the edge. This is common in gardens, and is now in full flower. It is a poison, and was known as fuch to Tragus, Dodonzeus, and all the old writers. The other is a low plant, scarce a foot high, with fish-green leaves, and only one or two flowers : the flowers of this are green. This is the true bearsfoot; which is recommended with great juffice against worms. The other being more common, has been used by miftake in its place, and to this the death of those infants was owing. There is the more reason for caution, because the poisonous one is the kind now fold in our markets.

- campos vid sasti man L. Hill. They write from Paris, that as a wealthy citizen of Paris was lately malking in the Thuilleries, a perfor came up to him, and bid him a be upon his guard, for that night be would be murdered. The citisen retired after fupper, as ufual, to his bed-chamber, having furnished himself with fire-arms, At

tered the room. One of them be shot dead, and with a second shot broke the arm of another. The third ran away. The person killed proved to be his own fon, and the wounded person his nephew, who is now in prison along with the third affaffin. This, fays the win ter, is the second instance of the kind that has happened at Pani within thefe three months; to fuch a height is licentioumels rifen in that capitalen appropriate

Died lately. In the parish of St. Leonard's, two old men, brothers, who a little before lodged in the parish of Cripplegate, but lived there in so miserable manner, as to be discharged their lodgings. On their death it appeared that the interest of 4000 l. which they had before lest to Cripplegate parish, was now lest to the poor of St. Leonard's for ever. A caveat was entered by a third brother against the will, but we hear it is finally determined in swour of the poor.

On opening the apartments in Newgate, John Berry, a prisoner in that goal, was found dead in his cloaths, lying by a parcel of muffels, the eating of which, it is supposed, had occasioned his death (for our article of Natural History for this year). He was one of the five wretches concerned, in inducing others to commit robberies, for he fake of getting the rewards for apprehending and convicting robbers, and even in accusing innocent men of pretended robberies for the fame purpole. The obligation on the judges in England to adhere firically to the letter of the law, when favourable to criminals, never appeared more conow than in the case of these micros; for, though the above were fully proved against then they escaped death by the judgment of the twelve judges, before whom the affair was folemnly argaed. One of them however was foon after killed in the pillory, to which, as for perjury, they were condemned. chosked or.

Extract of a letter from Bratton, in the county of Wilts, March 3.

"Yesterday a very uncommon phonomenon appeared here, about half an hour after eight at night: on each side of the moon was a bright spot, rather larger than the moon, in the same parallel of altitude, one of which was near a star of the second magnitude in the shoulder of Orion, the other near a star of the like magnitude in the arm of Perseus: from each of which spot issued a bright semicircular, or semicliptical arch over the moon, the highest part of the arch near Capella, a star of the first magni-

tude; and from each of the faid spots a light circle, parallel to the horizon, quite round, pelling hear the flan in the end of the tail of Urfa Major. .. This bright bosisontal circle was in breadth nearly the diameter of the moon ; a faint app rance of it passed between the bright ipate (the moon being in the circumference of the circle hand the honizontal altitude of sythe circle every where about 72 degrees The moon's distance from cach of the bright pots about 400 des on the arch of a great circle . The circle was almost vanished by nine o'clock : but what time is first ape peared I don't know, as I did ade fee it before half after eight,"

His majesty went to the house of peers, and gave 24th. the royal affent to the following bills, viz. The bill to panish in tiny and defertion, and for the better payment of the ware and their quarters .- The bill for the better regulation of his majefty's marine forces on flore willhe bill for appointing commissioners to execute an act, entitled, an act for granting an aid to his majeffy by a land-tax, for the fervice of the prefent year. - The bill to prevent vexatious proceedings against innholders, victuallers, and others, for raifing the price of male liquors in proportion to the taxes on thefe necessaries; and to prevent fraude committed, by re-landing of beer and ale defigned for exportation. The bill to enable his grace the duke of Bridgewater, to extend a navigable canal from Longford Bridge, in the county palatine of Lancaster, into the river Merley in Cheshire; and to several road and private bills. By the above bill for exempting victuallers and brewers from all the penalties to which they

were hitherto liable for raising the price of beer, a penalty of 50 kms to take place immediately, on every period mixing firong beer with small been or water for fale.

Certificates were received at the

Admiralty office, figned by gover-nor Lyttetion, and the officers of the Media floop, of the improvements made by Harrison's new ma-chines towards aftertaining the longitude at sea, young Mr. Har-rison having just complessed a voyage to jamaica for making a a trial of thefe machiness and an

His majefty has graciously given a thip of 44 guns, to the proprietors late Antigallican privateer, for the use of them, their officers and feamen. do an a whaten the

A proposal for raising five regi-ment of papists in Ireland, having lately been offered by the lords Kilmare, Kingfland, Sir Patrick Bellew, and fome others of that religion, in order to be taken into the pay of the king of Portugal for ten years. The parliament of Ireland thought proper to take cognizance thereof, and the scheme was foon dropt.

Tho. Smith, alias Harding, Laur. Tearman, Tho. Baldwin, and Rob. Maine, were copitally convicted, and received fertence of death, at a fessions of admiralty, at the Old Baily, for pi racy, on board the King George privateer, of Briftol, in affaulting and confining the captain and officen and running away with the thip.

Kingston, Jamaica, Dec. 19. Lat Saturday arrived here, the floor Sally, Paul Androuin, mafter, from the Spanish main, by whom we learn, that on the oth ult. there happened at Carthagena, a terrible form from the fouthward, which was followed by an earthquake, that has deftroyed a great part of the walls of the town, many of the houses, and numbers of the inhabitants were drowned by the flood which came down fuddenly from the mountains with fuch rapidity a was never feen there before; and that the floods brought down foch a prodigious quantity of mud, &c that the entrance of Bocha-Chicawa entirely choaked up, and that the Spaniards were employed in opening of Bocha-Grande. That two Spanish men of war were drove on shore, and that the castles of Sainta-Martha were entirely destroyed.

A French officer (lately prisoner on his parole at Weymouth) writes to his acquaintance in Belfaft, dated Jan. 29, 1762. 11 On the 10th of January I failed from Havre de Grace on board his majesty's frigate the Zenobie, of 22 guns and 210 men, commanded by M. de Sage. We were attacked, on the 12th, by a most violent storm; and finding all our refistance to be in vain, and

100 to tel. E & OPT

le, as the last effort for our lives. were obliged to run our thip thore on the peninfula of Portind; where with great difficulty, I of us were faved, and thefe in a elancholy plight, being almost all ounded and naked; and to comleat our milery, the barbarons landers, feeing our helpless state, cked down upon us, and of the ttle coverings the merciless sea had eft us, poor wretches ! they with pore hardened cruelty firipped very foul : and had not the geneofity and tenderness of the Sieur. raver (commander in Portland) sterposed, we should have all unoubtedly perifhed. When we had covered strength enough to walk bout, we were removed to this was and then wrote to the lords the admiralty, petitioning their ordhips that in commiseration of difresses, they would not add puitty to our misfortune. Their ordships honoured us with an anwer, that we were not at all regardid as prisoners : and farther, that our letter had been presented to the ting, and that his majesty, in compassion for our deplorable circumlances, had ordered, that we should e all immediately cloathed at his, expence; and whatever we called for, he would pay."

This humanity and generosity has been attended with the following good effect. On the night of the dreadful florm of snow and hail, or rather hurricane, the 21st ult. an English trading vessel was drove on shore at Havre de Grace, and broke to pieces, but the crew saved; the commandant of the town being informed of the affair, ordered them to be quartered at a coffee-house, and allowed the common men thirty

or sufferings at sea to be insupportle, as the last effort for our lives, there; and the latter end of last week
were obliged to run our ship they arrived safe in England.

Premiums that have been proposed by the Imperial Accademy of Sciences at Petersburgh.

For the premium propoled for

To deduce from experiments the refraction of the rays of light in different bodies, folids as well as fluids; and from thence to prove what degree of such refraction is owing to the different specific gravity of bodies, and what to the various cohesion of their particles, or to their constituent principles; and to explain the whole by a theory conformable to the several experiments.

For the premium proposed for

To determine the theory of the perturbations, which comets suffer in their motions, from the attractions of the planets, and to demonstrate the agreement of such theory with the observations of the comet of 1759.

For the premium proposed for

1762, required,

To shew how far the imperfections of telescopes and microscopes, arising from the different refrangibility of the rays of light, and the spherical figure of the glasses can be corrected or diminished by a combination of several lenses, and to accommodate the theory to practice, and confirm it by experiments.

As to the first premium, the academy affigned their reasons in 1761, why it could not be bestowed on that fingle and only differtation which was sent; and as the like reason stands against that for 1761, the academy declares that any one

in fill free to fend in differentions n those subjects, for obtaining the respective premiums; and repeats the question proposed for 1762, adding for the next year, 1763,

the following one:
As it is well known to those who are well acquainted with the art of fluxing ores, that many metalline ones require divers kinds of addicions (Zufeblage,) before they are committed to calcination and fusion; partly to dispose them to an esfier feparation from the heterogeneous parts, and partly to prepare metalline parts to fink down; a method is required whereby any mecalline parts may be separated from the ore, which will be more expeditious and cheaper than those in use, and not stand in need of so many additions; and that the few retained shall agree with all forts of metals. The academy expects fuch a folution of the problem as shall be well supported both by reason and experiment.

The learned and skilful of all nations are invited to impart their fentiments and observations concerning the foregoing subjects to the academy, so as that they may be presented at Petersburgh any time before the 1st of next June. The premium for the best solution of each problem will be 100 ducats

of gold. Mr. Dorfet, a tallow-chandler near Spital-fields, who died lately, has left to nine diffenting congre-

gations 1000 l. each.

Robert Laurence, of Gifborough in Yorkshire, aged 90, was lately married to his fourth wife, Jane Edderson, aged 100.

The wife of the duke of Rich-

mond's porter was lately delivered of three daughters.

Admiralty-office. His majefty's thip the Burford, commanded by capt. Gambier, is an rived at Plymouth, with the St Prieft, a French Baft India ship, d 700 tons burthen, and 240 men and paffengers, from the ifle of Bourbon, bound to L'Orient: which was taken the ith of la month, by his majesty's ship the Valiant, one of the ships which failed from Spithead with Sir George Pococke. Her cargo confifts chieff of coffee and pepper.

At the anniversary fermon and feast of the small-pox hospitals, 6811. 13 s. was collected for that

charity.

The utility of this establishment will appear by confidering, that if only one in feven die of the smallpox in the natural way, and one in three hundred and twelve by inoculation, as experience shews, then at One million divided by

1428577 7 gives

One million divided by 3205 113 312 gives

The lives faved by inoculation upon one

million must be - 139652 111 A most surprising difference !

This is further evinced by the following anecdote. The hon. John Petre, brother to the lord Petre, who died lately, aged 24, is faid to be the eighteenth person of that family that has died of the smallpox in 27 years.

11.

The bill to explain, amend, and reduce into one act, the feveral aws relating to the training and governing of the militia.

The bill for the better encoungement of feamen, and for the more speedy and effectual manning of his majesty's navy.

The bill for relief of vassals of states in Scotland, which are, or may be annexed to the crown on account of attainder.

The bill to render more effectual in act for allowing a public reward for discovering the longitude at sea, to far as it relates to trying and proving experiments relating to the lid discovery.

The bill for the better supplying he cities of London and Westminter with fish, to reduce the exorbiant price of the same, and for the better encouragement of fishermen.

The bill for the better preservation of the game in that part of Great Britain called England.

The bill for naturalizing foreign protestants that have served, or may serve a limited time as officers, engineers, or soldiers in America.

And also to several bills to inclose lands, repair roads, improve and preserve the navigation of rivers, and private bills.

By the above militia act, persons liable to serve in the said militia may be chosen by ballot, as before; or otherwise the parish officers, with the consent of the inhabitants, may provide volunteers, to be approved of by two deputy-lieutenants and one justice of the peace; and whatsoever expence they are at for providing such volunteers, they are im-

powered to reimburse themselves by a rate on the parish, to be made in proportion to that for the relief of their poor, and the overplus, if any, to go in aid of the poors rate. By the faid act, parish officers are to pay every person chosen by loc and fworn in, or substitute, such fum of money, not exceeding five pounds, as any two deputy-lieutonants and a justice of the peace shall adjudge to be one half of the current price then paid for a volumteer in the county where fuch per fon shall be chosen; which sum shall be raifed and reimburfed by the faid parish officers by a rate to be made according to the poors rate, as afore-mentioned.

It is also enacted, that no person under the age of 18, or above 45, articled clerk, apprentice, or poor man with three children born in wedlock, shall be compelled to ferve.

Also, that every person who shall contract, or agree with any other (liable to serve) to insure him from serving in the militia, by providing a substitute, or paying the penalty of ten pounds, shall, for so doing, pay the penalty of one hundred pounds, one half to the prosecutor, the other to the poor of the parish.

The faid act takes place from the passing thereof, and is to continue in force for the space of seven years, and from thence to the end of the then next session of parliament, and no longer.

And nothing in faid act is to extend to prevent persons of the same parish, town or place, from entering into subscriptions amongst themselves, for paying jointly, for any substitute or substitutes, who may be provided for one or more of the

Coh

subscribers; who may happen to be chosen by lot.

By this wife and wholfome alteration in the militia laws, which obliges, and very juftly, every man to pay his quota, all parifhes have it in their power to keep their good and ufeful hands at home, and by a small and equitable tax, to be raifed only twice in seven years, to fend the idle and dissolute to serve their king and country for three years in the militia.

By the act for providing a reward for discovering the longitude at sea, the commissioners appointed are empowered to hear and receive propolals for discovering the longitude at fea, and being fo far fatisfied of the probability of any fuch propofal, as to think proper to make experiment thereof, they shall certify the fame, with the authors names, to the commissioners of the navy, who shall make out bills thereupon for any fum not exceeding 2000 l. as shall be thought necessary, to be paid by the treasurer of the navy out of any money in his hands unapplied. — This makes 6000 l. granted for this laudable purpose.

By the act for the better prefervation of the game, after the 1st of June, 1762, no person, under any pretence whatsoever, shall take, kill, buy, or sell, or have in his custody, any partridge, between the 12th of February and the 1st of September; or any pheasant between the 1st of February and the 1st of October; or any heath-sowl, commonly called black game, between the 1st of January and the 20th of August; or any grouse, commonly called red game, between the 1st of December and the 25th of July in any year,

This act shall not extend to phea-

fants taken in the proper feats, and kept in mews or breeding places.

Nor shall it extend to Scotland.

Persons offending in any of the cases aforesaid shall torseit 5 l. pubird to the prosecutor, to be recovered, with full costs, in any of the courts at Westminster.

And as by the former acts moiety of the pecuniary penaltic inflicted upon persons who destroy the game is directed to be applied for the use of the poor of the parish where the offence is committed, which disqualified the inhabitant from giving evidence; from the passing of this act, the whole of such pecuniary penalties may be such pecuniary penalties may be such of the prosecutor, with doubt costs; and no part thereof shall go to the use of the poor of the parish.

Profecutions shall comment within fix months after the fact is committed.

A little before eight in the evening, a terrible fubterraneous noise was heard at the forges of Barnau, near the gold and filver mines of Koliwanowosreferkoy, which was foon after followed by a shock of an earthquake, that lasted for three or four minutes. All the houses were shaken by it, the beds firongly agitated, and the moveables thrown about. On the 12th, about noon, happened a fe cond, somewhat less violent, but of the fame duration as the formet. The weather, during this last, was cold, and remarkably ferene; during the other, calm and very cloudy.

Capt. Crabb, of Abchurch-lane, getting out of
bed in his sleep, opened the salk,
and threw himself out of the win-

ow. He was greatly hurt, but is a fair way of recovery.

At the anniversary sermon, and feast of the London ospital, 1103 l. 16 s. 7 d. was col-

cted for that charity.

Messirs. Mason and Dixon, sent out by the Royal Society to observe the late transit of Venus over the sun, are returned from the Cape of Good Hope, and have brought with them a most circumstantial, excel-

lent, and fatisfactory observation,

for which they have received the

His majesty's pardon is granted to Mr. Macdonald, of Barrisdale, condemned for the late rebellion, and ever fince a prisoner in Edinburgh castle.

The king of Naples has presented to the universities of Oxford and Cambridge, a third volume of an account of the antiquities discovered

at Herculaneum.

A party of Gage's rangers, who set out from Montreal, last summer, to reconnoite the country and the great lakes of Canada, and to take possession of the remotest parts comprised within the limits of that province, according to the capitulation, returned to Philadelphia, at the beginning of February, after travelling by land and water 1800 miles.

At the anniversary meeting of the Middlesex Hospital, 400 s. was collected towards the support of that charity. To shew the usefulness of this and other charities of the same kind, especially in great towns, we insert the following list of persons sent to it

for relief in a very few days.

Saturday night a chairman falling down with his chair in Carnabymarket, sprained his leg in a violent manner. Sunday John Cartwright, a labouring man, was terribly bruifed and cut in the head. Tuesday Robert Mitchel, a farmer's fervant at Kentish Town, was kicked by a horse, and miserably bruised; and the same day a servant falling from behind a post-chaife, hung on the spikes, whereby his legs were terribly tore. Wednesday a coachman fell off the box, and was greatly bruised; and the same day John Kelly, a labouring man, being that at with powder by a foldier, had his face terribly bunt. Thursday Samuel Jackson, a creman, driving his cart loaded win coals, sell down, and the whet going over his foot, erushed it in miserable manner; and the same day Philip Clarke, a poor man, who some time ago had his thigh broke, and was just come out of the Middlesex Hospital cured, sell down in Leicester-fields and broke it again. They were all carried to the Middlesex Hospital, and admitted.

A gentleman at Grinstead Green, Kent, having loft a pointer, in e weeks after it was discovered the bottom of a chalk-pit, uprds of 60 feet in depth, and was en op alive, but almost entirely aciated; the animal had nothing chalk to subsist on, yet by procare was preserved.

A poor labouring family near deston in Norfolk, have been ely afflicted by a terrible disorder. elimbs of feveral of them havrotted off, though without any bry to their health, or the other ts of the body. But as the case bestmordinary, we thought proto give it a place in our article.

Natural History. Within these four months, about rteen male whales have been ven out of their element on the glish and neighbouring coasts, ft.of which yielded great quanes of blubber and spermaceti, d would have yielded much ater, had they fallen into skilful

One of these whales was disered in the month of February, ating on the water, by fome ermen going through the Hope. ley at first took it for the mast a ship; but as they drew arer, discovered it to be a large ; and upon feeing it cast up a eat quantity of water from its outh, suspected it was a whale; ey then chaced him below the ope Point, and went off to him in eir boats; he seemed a motion-

pereffes. Dutchess dowager of less lump, his head and tail being concealed in the water: they pierced the prominent part, and after having digged a hele a foot deep, a great torrent of blood iffued forth; upon which they withdrew at a distance, and foon after the boat had paffed (as the water was deep enough over his tail) he fruck the ground with fuch force, as to cast up stones and mire a great height in the air : if he had ftruck while the boat was over his tail, doubtless he would have it split to pieces. They waited about three quarters of an hour, and then he expired with the most horrible groans; after which they fastened a rope to his body, and on the turn of the tide towed him up the river to Greenland-dock, where innumerable crowds flocked to fee fo great a curiofity, even after the stench issuing from so great a mais of putrefaction, had infected the air to a confiderable distance. They took out of his head eight puncheons of spermaceti, which lay between the eye and the blow-hole, in different cells of the brain, and which, along with the blubber, fold for 1221.

The dimensions of this enormous animal were as follows; extreme length, 54 feet; breadth, 14 ditto; lower jaw, 10 ditto; length of the penis, 8 ditto; length of the tail, 15 ditto .-- The first knowledge of the drug called spermaceti (according to Watson in his Animal World Displayed) was owing to accident. One of these whales had been hurt and died: as the carcase fell to pieces, the oil of the head floated on the water, and the weather bleached it, and it hardened into that flaky matter. It was found that the oil of this whale's head would make the drug, and foon af-

[G] 2

Peer

ter they found the way of doing it by art, they made other oil ferve; and at prefent it is made from that

of any kind of whale.

In the riots and disturbances lately raised in the southern parts of Ireland, by a set of people called Levellers, are intirely put a stop to by the vigilance and activity of the earl of Halifax. It appears, that the authors of these disturbances have consisted, indiscriminately, of persons of different persuasions; and that no marks of disaffection to his majesty's person or government have been discovered, upon this occasion, in any class of people. London Gazette.

The above rioters were called Levellers, from their levelling such hedges, &c. as they thought incroached upon commons, the chief support of the poor in the country of Ireland; where there is not tillage or manufacture enough, as in England, to employ them; and the land, besides, comes to them thro' three or four hands perhaps, who all have a profit out of it. They

were likewise called White Boy, from their wearing shirts over the other clothes, the better to diffe guish each other by night, their when they generally assembled.

Amonument erected to the meory of James Thomson, author of e Seasons, &c. was this day opened Wellminster-Abbey. It is situated tween Shakespeare's and Rowe's. here is a figure of Mr. Thomson ting, who leans his left arm upon pedestal, and holds a book with e cap of Liberty in his other hand. pon the pedestal is carved a baslief of the Seasons, to which a oy points, offering him a laurel own as the reward of his genius. t the feet of the figure is a tragic ask and ancient harp. The whole supported by a projecting pedestal; id in a pannel is the following inription:

AMES THOMSON. Etatis 48, Obiit 27 Aug. 1748. utor'd by thee, fweet Poetry exalts er voice to ages; and informs the

page

ith music, image, sentiment, and thoughts,

ever to die !

his monument was erected in 1762.

The collection for the general hospital at Bath amounted to 165 l. 14 s. 10 d.

A fish, resembling a whale, about 11 feet long, and thick in proportion, with 88 ivory teeth, and three fins, two near the head, and one in the middle of the back, came ashore lately, about a league from Schevening in Holland. It weighed about 600 weight. It had the colour and nearly the tafte of falmon. When taken, it was followed by one of its young ones. On preffing its fides, there issued a kind of milk in great plenty. It was brought on shore alive; but died in a few hours.

There being reason to fear two poor persons, who, within these few days, died suddenly at Islington, perished by deadly Nightshade, the following caution, by doctor Hill, has been inferted in the public papers.

This plant is now a quarter of a yard high, and has an aspect so inviting, that one almost wonders nature gave it to a poison. It has invited many to boil it; and death was always in the pot. Ray mentions it growing in a ditch at the end of Goswell-street, in the road to Islington. It has been thought loft in that place; but I fear these unhappy persons have found it.

Came on at Guildhall, a a trial wherein a captain of a trading ship was plaintiff, and a lieutenant of a man of war defendant: the action was laid for 500 l. by the plaintiff, for impressing him out of his own ship, knowing him to be the captain, and confining him 48 hours on board a ten-The trial lasted near an hour! when the jury gave a verdict for the plaintiff, with 200 l. damages and costs.

 $[G]_3$

At

of polite arts, the premium of guineas was given to Mr. Joseph Nellekens, pupil of Mr. Scheemaker, for a marble bas-relief, the subject Timoclea, conducted before Alexander.

At the same time a discovery was providentially made, that the great beam which supports the society's room was broken in two, and the walls of the room and the cupola considerably damaged, occasioned, as supposed, by the soundation giving way. If the room had been full, the company would probably have been buried in the ruins.

And at a prior meeting were produced some specimens of a new invention for the ladies, viz. painted gawfe. It is done with such exactness, as to imitate all the various thitches of which Dresden work is compoled; and, at the fame time, with fuch ingenuity, as far to furpals, to the eye, the finest performance with the needle. The specimens confifted of a cap, made up of a red filk caul, one piece framed and glazed, and a piece for a long apron. The ingenious inventreis values the apron at two guineas, which was declared, by fome judges there, to be worth, if of right Drefden, fifty pounds.

The linen manufactury in Ireland, by the wife management of the truftees, has this year been increased upwards of 80,000 l. and it is thought it is capable of being increased still farther, even to the extent of three millions yearly.

Was held a chapter of the garter, when his majefty invested his royal highness prince William with his late majefty's blue ribbon, and the earl of Bute with the ribbon of the late duke of Portland.

At a general court at Child Hospital, the treasurer reported is receipt of a legacy of 300 l. and another contingent one of 500 pegodas, both given out of a fortun of 1200 l. only, by John Palmer, in grateful return for his education in that house, whence he was sent uthe East Indies in 1745.

They have lately printed at the niverfity of Moscow, Cornelius Nepos, in the original; which is, perhaps, the first classical book that ver came from a Russian press.

His majesty has granted to the vidow and daughter of the late ingenious Thomas Simpson, F. R. S. kandsome pension for their joint and separate lives.

Boston, Feb. 15. Last week a furrey of the number of dwellings in his city, was taken by proper perons, when, on closing the lifts, here appeared to be 2737.

They write from Naples, that Mr. Strange meets with all the hoours and encouragements there, which his best friends could wish, od such as he has already received other parts of Italy. On his arival at Naples, he applied, by the sitish envoy, for leave to make a rawing from a celebrated picture by skedoni: but this method of application not proving successful, Mr. trange's works were flewed to the king's governor (prince St. Allicandre) and then liberty was immediately granted him, not only to make a drawing from that picture, but from as many others of the famous Parma collection as he should choose; and an apartment in the palace was ordered to be fitted up for him directly, with every accommodation.

The king was pleased to 29th. appoint the right hon. John earl of Bate, first lord of the Treafury.

The Jufticiary Court, or Court of Affize, was opened at Aberdeen, when not one prisoner appeared to

rial of nine hours, honourably ac- be tried. Upon enquiry, it was quitted. The principal evidence a- found, that the goals within the three shires of Aberdeen, Bamf, and Kincardine, were empty, having no one in them either for crime or debt.

> A comet was discovered from the marine observatory in France. appeared in the constellation of Camelopardalus, about 15 deg. from the pole.

> A water-quake was felt at Bergen in Norway, the fea ebbing and flowing preternaturally with great violence. On the 12th of December an earthquake was felt at Oby in Siberia, a phenomenon that was never known to happen there before.

Extract of a letter from Rome.

" The late pope Benedict XIV. and cardinal Paffionel first set on foot the very useful project of printing an exact and methodical catalogue of all the manuscripts in the Vatican library; the execution of which has been committed to the care of the learned Messieurs Assemani. The whole work will be distributed into three parts, each of which will take up several volumes. In the first will appear the Hebrew, Samaritan, Chaldean or Syriac, Arabic, Coptic, Abissinian, Persian, Turkish, menian, and other original languages. The fecond is to be appropriated to the Greek manuscripts. The third will contain the Latin, Italian, French, and other occidental languages. Three volumes of this grand work have already been published: They contain an historical and critical furvey of the Hebrew, Samaritan, and Chaldean manuscripts. Before the first volume there is a general preface, fetting forth the occasion of the work, and the method fixed upon for carrying it on; the origin. progress, and increase of the Vati-[G] 4 can

can library; and, finally, a chronological lift of the librarians, with the present form of its administra-

The printer gives notice, that the following volumes will forthwith be printed, with the same care, and in the like form as those published, viz. in folio, on the large paper, called alla reale. The price of each volume will continue the same to Subscribers, namely, four Roman crowns; and the bookfeller, Funtto Amideo, will deliver them upon producing the receipts. Non-subscribers must pay five crowns a volume. And,

At Madrid, is lately published, by the authority and at the expence of his Catholic majesty, in grand folio, the first volume of all the Arabic manuscripts (many of whose authors were inhabitants of Spain) in the library of the Escurial; with some account of each, by Michael Cafiri, a Syro-Maronite prieft, doctor in theology, and the king's librarian, and interpreter of the oriental languages. The whole collection is faid to amount to two thousand.

His royal highness the 30th. duke of York hoisted his flag on board the princess Amelia, at Spithead, and the next day re-

turned to London.

Mrs. Cole, wife of a carpenter in Spital-fields, was lately delivered

of three boys.

Died lately. The only fon of the late Andrew Highstreet, of Westminster, Esq; by whose decease, fix or 700 l. per. annum, comes to a certain fum of money out of the the Westminster-infirmary, and St. finking fund. Luke's hospital.

Mrs. Barrow, of Liverpool, of a the judges falaries. ropfy, for which she had been tapped 48 times, and had 200 gallons of water taken from her in

three years.

Mrs. Knights, of Norwich, and 100.

for the enrolment of deeds nd wills made by Papifts, and for he relief of Protestant purchasers.

- for the more easy and speedy ecovery of small debts within the own and county of Kingston upon

- for importing falt from Euope, into the colony of Nova Scotia

for repairing the harbour of Whitehaven, town and county, for egulating the carmen there, and or supplying the same with water. And to feveral other public and

rivate bills. At the auction at Sir Harry arker's, at Talton, in Worcesterire, the Seasons, by Titian, sold or 2201. For this painting 5001. ad been some time since refused. t the fame fale, some of old Hemtirk's pieces were fold for confiderble fums.

Being his majesty's birth day, who then entered ino the 25th year of his age, the me was observed with the usual emonstrations of joy. In the mornng the famous new bells at Bow hurch, the finest in England, were ung for the first time. The weight there bells is as follows:

First bell, eight hundred, 3-4ths

nd 71b.

2d. Nine hundred, and 2lb.

3d. Ten hundred, 1-4th, and 4lb. 4th. Twelve hundred and 7lb.

5th. Thirteen hundred and 24lb. 6th. Seventeen hundred and 111b. 7th. Twenty hundred and half, nd 261b.

8th. Twenty-four hnadred and half, and slb.

oth. Thirty-four hundred and half, and 6lb.

10th. Fifty-three hundred, 22lb. There has been lately found in a vault near Casan, the bust of the widow of Julius Cæsar, extremely well executed. This ferves to fhew that the kingdom of Cafan was once under the dominion of the Romans.

Died. The right hon, the lord Anfon, first lord of the

Admiralty, &c.

On the 2d of May last, a whirlwind happened on Port Royal Island in South Carolina, of the same nature as the great form which did fo much damage last year at Charles Town. This phænomenon was seen in the form of a column, 400 yards diameter; it had a circular whirling motion, and proceeded with great violence from the N.W. to the S. E. It tore up trees, and carried away houses and bridges : it forced the water in Broad river out of its channel, and threw it up to a great height. See our last vol. page 931

A cause was tried at Guildhall before the right hon. lord chief justice Mansfield, wherein Mr. Isaac Renoux was plaintiff, and Mr. Ferres, mafter of Jonathan's coffee-house, defendant, for an affault, by pushing the plaintiff out of his house. It being proved upon trial, that that house had been a market (time out of mind) for buying and felling government fecurities, the jury brought in their verdict for the plaintiff, with one shilling damage.

A meteor was feen at Sydenham resembling a ball of fire, which took its direction towards the fouth, where meeting with a dark black cloud, it imme-

diately burst with a noise like thunder, and dispersed into innumerable little stars with which the whole atmosphere was persectly illuminated. One hundred guineas was paid Mr. Read by the society of arts for the first premium in

Sculpture.

A remarkable cause came on in the court of King's-bench, upon indiaments against an eminent builder and a mafter bricklayer, employed by him, for a nuisance in leaving a heap of rubbish in the fireet, last October, no watch or light being fet up in order to prevent accidents; the consequence of which was, that a coach with fome ladies and children in it was overturned, most of whom were greatly bruised, but one of the ladies received fo much hurt, that she never spoke again, and her death (as was fully proved) which happened in two or three days after, was intirely owing to this accident. The builder alledged, that he committed the care of removing this rubbish to the bricklayer, whose proper province it was to fee it done; and the bricklayer laid the blame on the carter. But the builder was confidered as culpable, it being his bufiness not only to take care to employ proper people under him, but also to fee that they do their duty, and he was therefore fined 100l. which he paid in court; and the bricklayer's fentence was twelve months imprisonment in the King's bench.

At a court of common council, it was ordered that Lady-fair, in the borough of Southwark, shall not be held for the future, and that shews, interludes and other unlawful passimes, shall not be suffered at Bartholomew-fair.

19th. Pleased to constitute and ap-

point George Dunk, earl of Hat fax, first lord of the admiralty.

His royal highness the duke of York having hoisted 234 his slag on board the princess Amelia, at Spithead, went on board, and the whole sleet under Sir Edward Hawke, of seven ships of the lim and two frigates, fell down to & Helen's.

There is now blowing at the earl of Portsmouth's, at Billingbu near Reading, two narrow-leaved American aloes, with a number

of flowers.

An appeal came on lately before the court of delegates, between the dean and chapter of Westminster, and the parishioners of & Margaret's, concerning the painted window in the church; the bill was ordered to be dismissed, and each to pay their own cost.

At the fale, at St. Paul's coffee house, of Mr. Gill's collection of coins, medals, and curiosities, the following lots sold as under:

I Penny of Henry I. £ 2 2 0 I ditto of Edward I. 1 9 0 I Groat of Henry VIII. 1 2 0 I Crown, half-crown,

pence Q. Elizabeth

Half-crown and three
pence of Charles I.

A gold ring with an ancient runic in-

A letter upon a very fingular subject has been lately printed at Lyons, and reprinted at Amsterdam; this subject is, the "Advantages and origin of the gaiety that prevails among the French." This gaiety, indeed, is a peculiarity in their national character; and, what is extremely remarkable, nothing can overcome it; nothing can dejent that light and airy people. Let

or mist pels bon a fac

hamfi Pately high moor Monn that deep,

thirty owing in how fire b them be loaded with taxes, let their trade be ruined, their fleets funk, their armies defeated; all this makes little alteration in their demeanour. They don't fing a fong the lefs, or look a whit the graver on this account. Nay more, a Frenchman is immediately comforted under the loss of a town, a province, or a battle, if he be allowed to level an epigram at the head of a minister or general to whose charge these misfortunes are laid. A joke difpels the gloom of affliction, and a bon mot diffuses chearfulness through a fad heart. A jack pudding in a French ship is the best preservative against the scurvy, and it is well known, that when the famous Louvois heard of a spirit of desertion having got into a strong garrison, he always fent a Merry-Andrew to retain the foldiers in their duty. The author of the letter now before us imputes the French gaiety to the following causes: 1st. To their climate. 2dly. To the nature of their government, which exempts them from all influence or thare in public affairs, the transacting of which renders men naturally grave and ferious. 3dly. To that vanity, which gives the French a fond and pleasing notion of their superiority over all other nations. And, 4thly. To their fociability.

A moor at Solesberry in Bucking-hamshire; another great one near Pately-bridge in Yorkshire; the high moors near Shessied; and the moor or heath on Bloreme-hill in Monmouthshire, are all on fire; that of Bloreme-hill near six feet deep, and those near Shessield for thirty miles together in some places; owing, it is probable, considering in how many and distant places the fire broke out, not to malice or sarelessness, but to the extraordinary

disposition of the peat to kindle by inflammable exhalations, through the late excessive heat and dryness of the weather.

An elm-tree of an uncommon fize, in the close at Salisbury, giving a most violent crash, sell down so suddenly as to alarm many hundreds who were present, it being the fair time. Twelve or sourteen persons were beat down by the boughs; a boy had eight ribs and back broke, and died in about an hour, two men had each a leg broke, and much more mischief was done.

In Scotland, the woods of Rothmurcus, and the fine forests of Glenmere and Glenfiddick, have been in great great danger from the same cause. The woods of Abernethy have suffered prodigiously, and the neighbouring inhabitants have been employed night and day in diverting the course of the slames. Several woods in North America are said to have shared the same sate, and from the same cause.

A curious differtation has lately appeared in Holland, to recommend fugar, instead of falt, for preserving animal as well as vegetable provisions, as it preserves the virtues and flavour in the latter, as much as falt destroys both in the former.

Liverpoole, June 18. Ann the daughter of Jonathan Walsh, of Harrowgate, in Yorkshire, aged 12 years, last Christmas was a twelvemonth, intirely lost her appetite; she has not eat of any kind of solid victuals since that time; her support is nothing but a pint of wine and water, which serves her three days; notwithstanding so small a quantity, she enjoys a good state of health, and looks as well as ever.

A melancholy account was received from New York of the loss of a cartel-ship

that failed from thence in November, and was foon after cast away, and out of 120 souls on board, fix only were saved, among whom were the captain, and M. St. Luke; the latter lost a brother, two sons, two nephews, and several other relations and friends. There were on board 14 officers, to ladies, and 14 young gentlemen of fashion, and scarce a person in New York but has lost a relation or friend.

of Bethnal-green, aged 101.

THE TO PERSON AND THE

Came on at Guildhall the grand cause (which has been so often argued, and so long depending) between the city and dissenters, in regard to the serving the office of sheriff, before lord chief baron Parker, Mr. justice Foster, Mr. justice Wilmot, and Mr. justice Bathusst; when, after several learned pleadings, the judges were all of opinion, that the dissenters were not liable to serve the said office, &c. But the city has since appealed from this decree to the house of Lords.

Last week Dr. Wilson's prize, at Oxford, of ten guineas, for the best essay in English, on the advantages of a safe, honourable, and lasting peace, was adjudged to Mr. Ellison, probationer sellow of Merton col-

lege.

And the classical prizes at Cambridge of 15, guineas each, given annually by the hon. Mr. Finch, and the hon Mr. Towshend, were adjudged to Mr. Rosenhagen, of St. John's college; and to Mr. Eyre, of Peter-house, senior bachelors. And to Mr. Maddison, of Sidney, and to Mr. Zouch, of Trinity college, middle bachelors.

"The Hermione, a Spanish register ship, which left Lima the 6th of January, bound for Cadiz, was taken the 21st of May off Cape St. Vincent, by three English frigate, and carried into Gibraltar. Her cargo is said to consist of near twelve millions of money registered, and the unregistered to be likewise very considerable, besides 2000 serons of cocoa, and a great deal of other valuable merchandize."

An account of her cargo from

other papers.

5243 arobes of cocoa.
1193 quitals of tin.
2,276,715 dollars in filver and gold coined.
25 arobes af Alpaca wool.

6 quintals of Virginia wool.

Two boxes with letters, which
were thrown overboard from the
Hermione, have been taken up at

fea near Faro in Portugal.

A committee of the fociety for the encouragement of arts, made an experiment of an engine invented by a Swiss for rooting up trees. The engine answered the intentions, but broke in the operation. It is a very simple machine, and capable of great improvements.

Three Cherokee chiefs, 8th. lately arrived from South Carolina in order to fettle a lasting peace with the English, had their first audience of his majesty. The head chief, called Outacite or Mankiller, on account of his many gallant actions, was introduced by Leglington, and conducted by Sir Clement Cotterell, master of the ceremonies. They were upwards of an hour and a half with his majesty, who received them with great good.

3

ness, and they behaved in his prefence with remarkable decency and mildness. The man who affished as interpreter on this occasion, instead of one who set out with them, but died on his passage, was so confused that the king could ask but few questions.

These chiefs are well made men, near fix foot high, their faces and necks coarfely painted of a copper colour, and they feem to have no hair on their heads. They came over in the dress of their country, confisting of a shirt, trowzers, and mantle, their heads covered with skull caps and adorned with shells, feathers, ear-rings and other trifling ornaments. On their arrival in London they were conducted to a house taken for them in Suffolkfreet, and habited more in the English manner. When introduced to his majesty, the head chief wore a blue mantle covered with lace, and had his head richly ornamented. On his breaft hung a filver gorget with his majesty's arms engraved. The two other chiefs were in scarlet richly adorned with gold lace, and gorgets of plate on their breafts.

During their stay in England, of about two months, they were invited to the tables of feveral of the nobility, and were shewn by a gentleman, appointed for that purpole, the tower, the camps, and every thing else that could serve to inspire them with proper ideas of the power and grandeur of the nation; but it is hard to fay what impression these fights made on them, as they had no other way of communicating their fentiments but by their geftures. They were likewise conducted every day to one or another of the places of amusement, in and

about London, where they constantly drew after them innumerable crowds of spectators, to the no small emolument of the owners of these places, some of whom raised their prices to make the most of fuch unufual guefts. Here they behaved in general with great familiarity, shaking hands very freely with all those who thought proper to accept that honour. They carried home with them articles of peace between his majefty and their nation, with a handsome present of warlike instruments, and such other things as they feemed to place the greatest value on.

A dew of honey fell in the neighbourhood of Rathiermuc in Ireland, which loaded the trees and long grass in such a manner, that quantities of it were saved by scoops, a method used of saving water in some parts of the West Indies. [Something of this fort, but not in any quantity, may, at this time, be observed on the leaves or oaks, but whether an exudation, or a dew, we do not pretend to de-

termine.]

A young gentleman near Ormond-street shot a servant maid of the family, on her refusing to marry him, in a very dangerous manner. However, she soon recovered; and on his being tried for it, as an assault, gave such evidence, as made it appear he was out of his senses; upon which he was committed to a mad-house.

Was opened in Westminster Abbey near the 10th. Poets Corner, a monument in memory of the late George Frederick Handel, Esq. He is represented pointing to the back of the monument, where David is playing on

the harp. In Mr. Handel's right hand is a pen, writing part of the Messiah,

" I know that my redeemer liveth, &c." and the following inscription; GEORGE FREDERICK HAN-

DEL, Esq; Born February 23, 1684, Died April 14, 1759.

At lord Peterborough's, at Parson's Green, just as the gardeners had left work to go to dinner, a whirlwind came, and took up feven of the bell-glasses into the air above twenty feet: one of them. went over the garden wall into the King's Road, and had like to have fell on a man's head going along; three others were blown upon the hot-house, and broke a great quantity of the lights; the house was about twenty yards distance : and what is very remarkable, there were two rows of glasses, and the seven were the first row that was blown up, and in the other row there was not one ftirred.

A curious collection of above 30,000 tracts with some manuscripts, formerly collected and bound up in volumes for the use of king Charles I. but which fell into private hands, and for many years past have been in the possession of a lady, were lately purchased by order of his majesty, and presented to the trustees of the British Museum.

The harbour of Rye in Suffex was opened, purfuant to an act of parliament paffed the last sessions, by letting the sea and tides into the new cut up to Winchelsea wall, where vessels of 300 tons burthen, and upwards, can ride with the greatest safety.

A most beautiful monument, defigned by Mr. Stuart, and executed by Mr. Scheemakers, to the memory of the late gallant lord Howe, was opened in Westminster Abber. On the top is a trophy of arms in white marble; and on a flat pyramid of black marble, highly polished, are his lordship's arms, coronet, and crest: in white marble, on the top of the monument, sits a beautiful sigure of a woman in a melancholy position, inimitably well executed, representing the province of Massachuset's Bay, and underneath the following inscription:

A cer

The feffions ended at the Old iley, when eight persons receivedntence of death; John Placket, robbing, wounding, and leaving dead Mr. Faye, a Danish genman, whom he had decoyed late at ht into Islington fields, on a prece of conducting him to his lodges near the Tower; James Harand Richard Mitchell for a highyrobbery; two gentlemen and ervant of theirs for ravishing a man whom one of them picked in the Park, and carried to his gings; and Sarah Metyard, and ah Morgan Metyard her daughfor wilfully and maliciously muring Anne Nailor, a poor parish I, her apprentice, about four ars fince, by beating, bruifing, d tying her up to a door in a gar-, and with-holding from her vic-ls, and other necessaries, and reby starving her to death. The al lasted seven hours, and the y, without going out of court, bught them in both guilty. The der will find an account of this rrid affair at the end of the chrole. Placket, Hardy, and the two etyards suffered according to their tence, the other four capitally avicted have been transported, or t to serve as soldiers in Jamaica.

th. The fociety of arts paid Mr. Boult of Staines, 20 l. for the first premium of the four wheeled machine for the conveyance of fish; and 41. for the first premium of the two-wheeled machine for the same purpose.

James Costard tried for killing his mother, by firing a gun at her, and Susannah Harris, for the murder of her bastard child, were both found guilty and executed pursuant to their sentence at the assizes at Oxford, the day before. Costard said, he was not in his senses when he committed the sact; but it appeared that his frenzy was only the effect of drunkenness.

A fire broke out at the Bull-head inn in Wareham, which, in a few hours, reduced near three parts of that town to ashes. The meeting-house, and Mr. Kain's at the post-office, are burned; but neither of the churches nor the town-hall. The corporation of Blandford immediately sent to Wareham two cart loads of provisions, and two more were like-wise sent from Pool.

An ingenious artist has now in his possession the identical mourning ring which king Charles II. wore in memory of the murder of his father, whose picture is on the top immitably done in enamel, and, in a socket under it, some of that monarch's real hair. Within side is engraved on the gold as under,

Cha. rex Remem—Obiit—ber 30 Jan. 1648.

Remember was the last word that king Charles spoke to bishop Juxon before his martyrdom. And likewise a tooth-pick case curiously ornamented with silver, made of the piece of the oak which king Charles

H. cut from the tree while secreted there from the pursuit of his enemies; on the top is engraved a crown, and the words Royal Oak. His majesty wore it in his pocket for 20 years. They will shortly be presented to the university of Cambridge.

The king has granted a pension of 3001. per ann. to Mr. Samuel Johnson, a gentleman well known

in the literary world.

The right honourable the earl Temple has lately dedicated a most magnificent building at Stowe, of the Ionic order, Concordin ET VICTORIE.

In the pediment of the portico is a fine alto relievo, representing the four quarters of the world bringing gifts to Britain. In the portico, or anti-temple, two medallions, Concordia faderatorum, concordia civium. Over the door, Que tempore Salus eorum in ultimas Angustias deducta fullum ambitioni locum relinquebat. In the inner temple, in a niche facing the entrance, the flatue of BRITANNIA; over which in a tablet Candidis autem animis voluptatum præbuerint in conspicuo posita, quæ cuique magnifica merito contigerunt. On the walls, fourteen medallions, representing the taking of Quebec, Martinico, &c. Louisbourg, Guadaloupe, &c. Montreal, &c. Pondicherry, &c. Naval victory off Belleifle, naval victory off Lagos, Crevelt and Minden, Fellinghausen, Senegal and Goree, Niagara and Crown-point, Beau Sejour and Fort du Queine, Cherburg and Belleisle. On a hill at a distance, in a diagonal line, runs an obelifk above an hundred feet, inscribed,

To Major-General Wolfe.

Oftendant Terris bunc tantum Fata.

Mr. Meerman, fyndic of the conference of Rotterdam, who has diffinguished himfelf by his affiduous enquired into the origin of the art of Principal ing, has now turned his views to the discovery of the time in which the paper we now use was first enployed, and which he supposes we between the years 1270 and 1301 but to ascertain this, he promises premium of 25 ducats to the perhaps who shall produce the earliest public instrument written on paper made of rags.

The queen was brought to-bed 24 minutes after feven, after beg in labour somewhat above two ours. Her majesty found herself bt well at two o'clock, and about ree notice was fent to the princess Wales, that the queen was not ell; upon which, her royal highes hastened to St. James's, and as there by four o'clock. About ve, orders were fent to the great ficers of state to attend, and there ere present the archbishop of Canrbury, the duke of Devonshire, e duke of Rutland, the fords ardwicke, Huntingdon, Talbot, alifax, Bute, Masham, and Canlape, and all the ladies of the d-chamber, and the maids of ho-or. The queen was delivered by n. Draper: Dr. Hunter was in ting, in case of his help being inted. The archbishop was in eroom; and the lords in a room joining, with a door open into e queen's apartment. The perthat waited on the king with e news of her majesty's being deered of a prince, received a prent of a 500 l. bank bill.

Just after her majesty was fafely her bed, the waggons with the tasure of the Hermione entered James's-street : on which his jesty and the nobility went to the indows over the palace gate to fee em, and joined their acclamations two such joyful occasions. From nce the procession proceeded to e Tower in the following order. A company of light horse atnded with kettle drums, French orns, trumpets, and hautboys. Vos. V.

A covered waggon decorated with an English jack, and a Spanish flag underneath, hanging behind the waggon.

Two more covered waggons. Seven waggons uncovered.

And laftly, a covered waggon, decorated with an English jack, and a Spanish flag.

In the whole twenty waggons.

The procession was concluded with an officer on horseback, carrying an English enfign, attended by another holding a drawn cutlass.

The efcort to each waggon confifted of four marines, with their bayonets fixed.

The whole cavalcade was faluted by the people with acclamations of

On first opening some of the chefts at the Bank, they were agreeably furprized to find a bag full of gold instead of filver, in one of them; feveral were afterwards found of the fame kind, which made a very confiderable difference to the A vast deal of private captors. property has likewife been difcovered. In short, this is, probably, the richest prize ever brought into England, every private man's share amounting to about gool. It is somewhat remarkable; that this Hermione is the very thip that detained the Antipallican and her prize in Cadiz Bay at the beginning of the French war.

The following anthem, composed by Dr. Nares was performed before his majesty at the chapel royal, in thankfgiving for her majesty's safe delivery of a prince.

"O clap your hands together, all ye people.

O fing with the voice of melody. O fing praises, fing praises unto our God! O fing praises unto our king.

Lo, children, and the fruit of the womb, are an heritage and gift

that cometh of the Lord.

Like as the arrows in the hand of a giant, even fo are the young children.

Happy is the man that hath his quiver full of them. He shall not be ashamed when he speaketh with his enemies in the gate.

Lo, thus shall the man be bleffed

that feareth the Lord."

Hallelujah."

On the feventeenth the king was pleased to order letters patent to pass under the great feal of Great Britain, for creating his royal highness the prince of Great Britain (electoral prince of Brunswick-Lunenburg, duke of Cornwall and Rothfay, earl of Carrick, baron of Renfrew, lord of the Isles, and great steward of Scotland) prince of Wales, and earl of Chefter. And

On the 8th of September the ceremony of the christening his royal highness was performed in the great council chamber of his majesty's palace, by his grace the archbishop of Canterbury. His royal highness the duke of Cumberland, his most ferene highness the reigning duke of Mecklenburgh-Strelitz, (represented by the duke of Devonfhire, lord chamberlain of his majesty's houshold) being godfathers; and her royal highness the princess dowager of Wales being godmother. The young prince was named George Augustus Frederick.

Attendants on his royal highness the prince of Wales.

Governess, lady Charlotte Find Deputy governess. Mrs. Henrietta Coultiworth. Wet nurse, Mrs. Scott. Dry nurse, Mrs. Chapman. Necessary women, Mrs. Dodson. Rockers, Jane Simpsan, and, Catharine Johnson.

The right honourable the lor mayor, aldermen, and commons the city of London, the two univer fities, &c. presented addresses to it majesty on this joyful occasion that of the City of London, was follows.

Most gracious sovereign,

" We your majesty's ever die ful and loyal subjects, the la mayor, aldermen, and commons your city of London, in comm council affembled, humbly b leave to embrace this earliest opport tunity of congratulating your n jesty upon the fafe and happy de very of the queen, and the au cious birth of a prince.

So important an event, and up a day ever facred to liberty, a these kingdoms, fills us with most grateful fentiments of the vine goodness, that has thus en crowned your majesty's dome happiness, and opened to you people the agreeable prospect permanence and stability to bleffings they derive from the dom and steadiness of your majely victorious reign.

May the same gracious pro dence soon restore your majes most amiable and beloved confer and give perfect health, and leng of days, to the royal infant.

Long, very long, may your jesty live, the guardian and pro

or, the ornament and delight, of freat Britain; and, by your inructions and example, form the hind of your royal fon, to the goernment of a free, brave, and geerous people: and, in the fulness f time, may that fon succeed to the virtues, as well as to the throne, f his royal father; and preserve, or a long succession of years, the lory, happiness, and prosperity of is country."

o which address his majesty was pleased to return the following most gracious answer:

I receive, with the greatest pleare, these very affectionate expressions your duty and attachment to me, it to my family; and thank you for we congratulations upon an event so twesting to me, and to the future essue of my people, with which own happiness, upon this and way other occasion, is inseparably meded. The city of London may ways depend upon my constant sawer and protection.

Some time ago a farmer at Chilark in Wilts, having laid some eces of bread and butter in the antry, with arsenic spread upon em for the destruction of rats, piloned two of his men, who comgin from labour, eat the bread ad butter, and expired in great tonies.—A necessary caution to event such practices.

Worcester, Aug. 11. A dreadful cident has just now happened at in Russord's, by the blowing up of me gunpowder brought from London by his waggon, by which his archouse was entirely destroyed, of prodigious damage was done to a dwelling house, and to other ouses adjoining and opposite to it.

Several persons who were going along the street at the time, were thrown down and terribly burnt, fix of whom were sent to the infirmary, where two of them have since died. The quantity of powder blown up, it is said, was near 300 wt. the explosion of which was heard several miles off.

At the anniversary feast of St. Luke's hospital 2661. was collected for that charity.

According to the gaolers kalendars throughout England, only 22 persons have received sentence of death, four of whom, for murder, have been executed.

Was held a board of longitude at the Admiralty, at which a great number of persons of distinction were present, when 500 l. was ordered to be given to Mr. Irwin for his invention of a marine chair, with which some farther experiments are ordered to be made. Mr. Harrison and son attended likewise, and laid before the board the improvements made in their time-piece, and the observations made in a late voyage to the West Indies, and received 1500 l.

In a piece lately published by Mr. Hanway, entitled, Serious Considerations on the falutary Design of the Act of Parliament, for a regular, uniform Register of the parish poor infants, there is the following calculation, by which not only the usefulness of the regulations proposed by the said act, but likewise of the Foundling Hospital, seems to be fully proved.

"The precautions intended by this bill, granting some parishes to [H] 2 have

have done their duty, may, I think, fave annually to the state, on a low computation, 500 subjects. I fuppose the number of infants under 12 to 18 months old, being fuch as are in the most imminent danger of their lives, to be near 1500: that, upon the whole, a very small proportion of these has, for time immemorial, been preserved: taking into the account, all contingencies, 1 in 3 may be eafily kept alive: and, I conclude, that fome parishes will hereafter preserve I in 2. or 3 in 5. Notwithstanding the moral impossibility of finding proper nurles for 4000 infants, annually crowded, in the wildest manner, upon the Foundling Hospital, the managers of that hospital have preserved 1 in 3, past the danger-

ous part of life." There is in Berlin, and in every great town in the Pruffian dominions, a certain edifice, properly furnished and properly attended, to which any young woman, who has the misfortune of being with child, may repair, before her shame becomes public. The utmost fecrecy is preserved; she is treated with all possible care and indulgence; and a month after her lying-in difcharged, with 50 crowns in her pocket, if she has had a fon; and to crowns if she has had a daughter. By this means the murder of bastard children is effectually prevented, by removing every temptation to it. The children are preserved to the state, and such children only as are proper objects of its care. The unhappy women are covered from hame, and return again into fociety without fcandal. All this is fo far from encouraging proflication, that it has the very contrary effect; he every shameless common woman's feverely punished; and those out that are unhappily feduced receive the benefit of this benevolent cha rity.-An institution of the like kind is to be met with in the city of Copenhagen.

Rifing-fun clean; Dundee ships, Grand Tully, 2 very small, Dundee clean; three Dunbar ships 1 each; Aberdeen one ship, 1.

This day the following letter was received by the right hon, the lord mayor.

To the right hon, the lord mayor.

My lord.

" I have the earl of Egremont's directions to acquaint your lordship, that, in confequence of his most christian majesty's nomination of the duke de Nivernois to come here to treat of peace, the king has been pleased to name the duke of Bedford to go to Paris for the fame purpose; and his grace's appointment will be declared on Wednesday next, the first of September. My lord Egremont thinks it may be of use to make this public in the city as ops part of life foon as possible.

I am, with the greatest respect,

My lord, away assig

Your lordship's most obedient, humble Servant,

R. Wood.

A Dutch man of war, with four merchantmen un 311. der her convoy, failed lately from Amsterdam, but were separated in a gale of wind. Soon after one of them was brought to by one of our frigates from the Downs, and was found to be laden with thip timber, supposed to be for the French; upon which the commodore in the Downs ordered two frigates to cruize off Goree, who fell in with the man of war and the other three ships, and demanded to search them, which the captain of the Dutch man of war having refused, fome broadfides were exchanged between them, in which feven Dutchmen were killed; after which they [H] 3

fruck their colours, and were all brought into the Downs for farther examination.

About 700 old Roman coins were lately found in a ford in the river Pettarel near Carlifle. They appear to be of eleven different reigns, fome very fresh, and fome 1650 years old. Many are as large as crown-pieces, and some no bigger than a farthing; of a base metal, but fold at a high price to the curious.

A letter from a jefuit missionary in China, dated October 20, 1761, gives an account, that in the preceding fummer, they had in that country fuch prodigious rains, as to cause the waters to rise and overflow whole provinces, by which fome millions of people were drowned.

Extract of a letter from Paris.

Monfieur de Voltaire, the prince of our poets in this age, is preparing for press, a new edition of the works of the great Corneille the prince of French poets in the last age, with notes. This underraking is the more laudable, as the profits of it are to be applied for the benefit of a girl of eighteen or nineteen, the heires of the name of Corneille, whom M. de Voltaire hath generoufly taken into his house, and treats as his own child. Her father descended from one Peter Corneille, uncle to the great poet, is a very honest man, but very fimple, and has at present a pretty good place belonging to the hospital of the French army. The work is printing at Geneva in 12 or 13 volomes in octavo, price two Louis d'ors. Voltaire fends his remarks from time to time to the French academy. The king of France has subscribed for 200 copies; other subscribers are the infant duke of

Parma, almost all the princes of the blood, the duke de Choifeal, madame Pompadour, most of the Quarante Immortels of the French academy, and many other person of distinction. The dutchess of Grammont is most industrious in promoting this work, M. de h Borde, banker to the court, hath got above an hundred fubicribers to it. M. de Voltaire hath generously subscribed for an hundred copies. In the lift of the fubscriben there are also the names of several English and German noblemen.

The duke of Bedford fet out for France, to negotiate a peace.

A fire broke out, at two in 7th the morning, in the Press-yard in Newgate, which cansed great consternation in the neighbourhood. It raged for two hours and an half, and destroyed a building next to the college of Physicians. Capt. Ogle, a lunatic, confined for a murder tommitted some years since, and one Smith, confined for robbing the sables of ald. Masters perished in the sames. None of the prisoners escaped in the confusion.

The following melancholy accident happened lately in the parish of Aberlour, in Bamff shire: A servant lad, fond of a little boy of his master's, took the child in his arms to dandle him; unfortunately passing by a boiling causedron, the child by a sudden spring, leap'd out of his arms, and fell into the boiling liquor; and before it could be got out by the unhappy and almost distracted lad, was scalded to death.

oth. At the triennal meeting at Hereford, for the benefit of the widows and orphans of the poor clergy of the three dioceses of Worchester, Gloucester, and Hereford, the collection amounted to 257 l.

five, the other three years of age, sons to a gentleman in Pilgrim-street, Newcastle, being tempted by the beautiful appearance of the fruit

of the deadly nightshade, as it grew in the garden, eat of it. The eldest died the night after, and the youngest, after continuing 16 hours in convulsions, by taking oil, was happily recovered. (See before p. [85.]) A German physician gives the following specific: take two ounces of lavender vinegar, and two ounces of water, mixt, and drink them at one draught; repeat the dose if there be occasion.

A fea-monster was cast ashore at Newhaven, near Leith. It is supposed to be of the shark kind: is about 15 or 16 feet long, has 3 rows of very strong teeth, an extensive mouth, and surprisingly wide throat. It has also 5 rows of an astonishing hard and rough skin, on each side, which seem to serve as a coat of mail for its defence.

A fine bronze bust of the E. of Halifax, is put up at the Senegal and Goree coffee-house in Cornhill, on which is the following inscription:

"GEORGE DUNK, Earl of Halifax, under whose most auspicious patronage the plan for conquering the French settlements of Senegal and Goree on the coast of Africa was happily carried into execution, in the year MDCCLVIII."

Tivoli, August 11. Some days ago, as workmen were digging the foundation for a house on the eminence of Saracineso, they found a subterraneous edifice, confisting of ten chambers, paved with beautiful marble; and in one of the chambers three statues six seet high, one representing Antoninus Caracalla, the other Julia his stepmother, and the third Geta his brother. On the first was this inscription; Antoninus imperator Romanorum decus. On the second; Julia in bo-

[H] 4

nestate

ANNUAL REGISTER [104]

neflate excellens. And on the third; Sit Geta divus dum non sit vivus. They are bought by M. P. Archinto, to be made a prefent of to the general marquis Clerici.

The duke de Nivernois, 12th, with the character of ambaffador and plenipotentiary from the court of France, arrived at

London to treat of peace.

The first night after his excellency arrived in England, he lay at Canterbury, when the inn-keeper's bill in the morning was as follows:

Marke Life De Bridge	1.	J.	d
Tea, coffee, and choco-			
late	1	4	C
Supper for felf and fer-		900	- "
vants	15	10	0
Bread and beer	3	0	0
Fruit	2	15	•
Wine and punch	10	8	8
Wax candles and char-			
coal		0	
Broken glass and china	2	10	0
Lodging	1	7	0
Tea, coffee, and choco-			
late	2	0	
Chaife and horses for	40		
next stage	2	16	•

The whole company, confifting of twelve persons, drank mostly port wine: according to the quantity, it comes to 11s. per bottle, and punch the fame. One of the fecretaries of state being informed of this treatment by an English gentleman, who accompanied his excellency, made an apology to his excellency for fo flagrant an impofition, and so great a breach of the laws of hospitality; telling his excellency at the same time, that orders should be given for prosecuting the offender. But his excellency very generously interposed in his behalf. It is imagined, however, that he has fince paid dearly for his

offence, as the other inn-keepen in Canterbury loft no time in informing the public, that it was not at the houses the duke put up.

A man who went to see the Tower, imprudently puting his hand through the grate to ake a sheep's head from one of the ions, lost a singer by his folly, the ion snapping it off in an instant.—
A caution, we hope, to others.

His royal highness prince
William and the earl of
Bute, were installed knights of the
Garter, at Windsor, with great
magnificence; the king, as sovereign, and the rest of the royal family being present.

Their majesties, on their return from Windsor, honoured Eton college with their prefence, being attended by the lords and ladies of the court.

They were waited on by the provost and fellows at the great gates of the college, and conducted into the school, where the masters were prepared to receive them, with the scholars standing in their places to the number of 500.

Their majesties passed between them to their chairs at the upperend of the school; and being seated, the company standing behind their chairs, one of the scholars advanced from his place into the middle of the school, and addressed the king in a speech in English; which was graciously received by his majesty.

Their majesties had then the condescension to look into the long chamber or dormitory. In the interim the scholars and masters went into the chapel, and took their places there. On their majesties coming into the chapel, a solemn piece of music was performed on the organ, accompanied with many other instruments.

Their majesties walked the whole length of the chapel to the rails of the communion table, viewing the scholars on each side, and expressed very great fatisfaction in the fight. From thence their majesties went to the hall, and to the library, where many of the young noblemen were presented to them; and the valuable collection of drawings, &c. belonging to the college, being carried into the election chamber, a room adjoining, they were pleased to spend a considerable time in examining what was worthy of notice.

On their going down from the Provost's Lodge into the quadrangle, the whole school was drawn up in several lines to receive their majesties, and saluted them as they went into their chaise, with a joyful cry of, Vivant Rex, & Regina.

My lord chamberlain, by his majesty's order, left a very noble prefent, amounting to 2301. to be disposed of as the provost and masters of the school should think best.

The Thames rose on a south of the wharfs were driven against each other with great fury. This commotion is supposed to be oweling to an earthquake, in some distant quarter of the globe.

The duke of York arrived at Portsmouth, and on the 30th sailed from St. Helen's, with the Princess Amelia, Magnanime, Essex, and Pearl frigate, in quest of a French squadron.

The king has granted a penfion to the learned Dr. Kennicot.

At the clergy's fons feast at Briftol, above 3321. was collected. An officer of Excise at Falmouth, lately seized there, from on board a ship, 27529 pounds weight of tea, and 9000 gallons of brandy, with the ship, for the use of his majesty's eustoms. The officer by this gets at least 3000l. It is the greatest seizure of tea ever known.

Extract of a letter from on board the Hampden packet, of eight carriage guns and thirty men, Capt. John Broad, stationed between Faro and Gibraltar, dated at Gibraltar, Aug. 2.

SIR,

"When we came off Teneriff we had a prospect of eleven privateers, all coming down in order of battle; the commodore was a barcolongo, of eight guns and fixty men: his fecond was a xebeque, of the same number of guns and men; thefe two led the van; five others of a lesser fize came a little astern of the commodore, the other four of 25 or 30 men each, with one gun in the prow, brought up the rear : the engagement began at 11 o'clock, and at half past one they hauled their wind and returned from whence they came, and left us to proceed to Gibraltar, where we arrived about three o'clock, without one man either killed or hurt.

Our fails and rigging are greatly damaged. The foldiers on the quarter-deck behaved extremely well, and fired 16 rounds each, which did great execution, as they took aim, and never discharged in rain.

No persons could behave better on our side, nor worse on the part of the Spaniards; we were so near Gibraltar, that some of the inhabitants were spectators all the time, and at our coming ashore caressed us greatly, and the men of warfest their surgeons to affist us, but happily for us, their services then were not wanted. By a Spanish bost that arrived here after the engagement, I hear they had four men killed and eight wounded: the commodore is shot through the right arm."

The celebrated Dr. Storck, author of the Treatise on the Medicinal Virtues of Hemlock, hath lately published a small treatise, proving from experiments made on himself, that the thorn apple (perme epineuse) henbane, and wolfbane, which have hitherto been considered as poisons, may be taken inwardly with safety and advantage.

Died lately. Signior Francisco Geminiani, the famous performs on the violin, aged 96.

Mrs. Hill, of Fetter-lane, aged

LOO.

Donald M'Donald, at Aix-la-Chapelle, aged 110.

OCTOBER.

A terrible storm did great damage to the shipping on the sea-coasts of this island, particularly at Yarmouth, where the silvery suffered irreparably.

The earl of Litchfield, lately elected chancellor of the university of Oxford, was installed at his lordship's seat at Ditchley in that county, at which ceremony the vice-chancellor, heads of colleges, proctors, the public oraton, and other proper officers attended. This ceremony has been usually performed in the university, but dispensed with in honour of his lordship, though not without precedent.

"I have the commands of the lords commissioners of the Admiralty to acquaint your lordship, that they have received an account this morning of St. John's in the island of Newfoundland being taken, by his majesty's ships and troops under the command of Lord Colville and Colonel Amherst. The French garrison, consisting of eight hundred men, being made prisoners of war; but their ships of war escaped by means of a fog."

I have the honour to congratulate your lordship on this great event, which my lords hope you will make publickly known.

I am, with very great respect,

Your most obedient,

And most humble Servant, .

J. CLEVLAND."

14th. Sworn one of his majesty's principal secretaries of state.

This evening there was great lightening without any thunder, the flashes were white, and very luminous: and the weather changed from extreme cold to unusual heat.

A bill of indictment was lately found by the grand jury at the general quarter fessions held at West-minster, against a famous printseller, for vending in his shop divers wicked and obscene pictures, tending to the corruption of youth, and the common nuisance.

The king has bestowed on Mr. Sheridan a pension of zool. per annum.

The prize questions of the Haarlem academy of sciences for this year are:

I. What are the best methods to be taken with children, with respect to cloathing, food and exercise, from their birth to the age of puberty, in order to a long life and the preservation of health?

II. How to turn high or low lands to the greatest advantage, each according to its nature?

Many woods caught fire in the late very dry feason, in New England, and did some damage to the neighbouring settlements.

The diet of Poland having affembled on the 4th instant on extraordinary affairs, a motion was made for the election of a new marshal, but on some objections being started, the assembly was adjourned to the next day. On that day the motion was again renewed, and it being proposed to clear the house of such members as had no right to vote, and young count Bruhl being particularly objected to, who, it was faid, being no Polander, either by birth or naturalization, cuuld not possibly be admited; in an instant sabres were drawn, and all fell into confusion. these occasions the motion of any one member to break up the diet, is, if not foon withdrawn, fufficient for that purpose.

The waters in the feveral parts of England, particularly in the ²⁴ low grounds to the east of London, began to rise with great sury, and continued so doing for two or three days, in consequence of heavy rains, and strong north winds, which hindered several of the rivers from slowing as fast as usual into the sea. In some places the inundation began suddenly in the dead time of the night, and rose twelve seet in sour or sive hours. At Norwich all the lower parts of the city, and

between .

between two and three thousand houses, were under water for two or three days, Several persons lost their lives on this occasion; many houses and bridges, with all the cattle, hay, linens on the printing and bleaching grounds, &c. that lay in the way of the floods, were swept away by them, to the amount of feveral thousand pounds.

The fleet under Sir Charles 30th. Hardy, and the duke of York, arrived at Plymouth from the Bay.

Died lately. Mr. Sampson Gideon, who has left, among other legacies, 1000 l. to the London hospital; 2000 l, to the corporation of the fons of the clergy; and 1000 l. to the Jewish Synagogue, on condition that he should be interred in the lews burying ground, and prayed for in the Jewish service, as a Jew and a married man; which was done accordingly.

Alderman Newton, of Leicester, aged 79; who dying worth 14,000 l. left the greater part of it to educate poor children. At Leicester 35; at Ashby de la Zouch 25; at Earl Shilton 20; at Northampton, St. Neot's, Hertford, Hunting, Bedford, and Buckingham, 25 each.

Mr. Barnard, in Great Wild-

fireet, aged 102.

NOVEMBER. A violent shock of an 6th. earthquake was felt at Aquila in Spain, which threw down several houses, and cracked the walls of the church from top to bottom. In 1703, more than 2000 persons lost their lives by a like accident.

The following letter was received by the right hon. the lord mayor. Clevland Row, Monday, Sth. Nov. 8, 1762.

" My lord,

I am directed by my lord Egremont to acquaint your lordship, that one of his majesty's messengers has

this moment brought an account of the duke of Bedford's having figned the preliminary articles of peace, with France and Spain, at Fontain. bleau, on the 3d instant. The fecretary of flate's intention, in mak. ing this immediate communication to your lordship, of the first account relative to the fignature of the preliminaries, which has been trans. mitted to his office by the king's minister at Paris, is, in order to have it publickly known in the city, without loss of time. Your lordship will, no doubt, take such fleps as are most proper to answer that purpose.

Some hours before day-12th. break, there was was feen in the air in the fouthern parts of France, a globe of fire, a little less than the moon, which was then in her full, but much more luminous. According to some letters, this meteor appeared at half an hour after two in the morning, and its direction was from S. W. Others fay, that it was perceived between four nd five, and that its direction was from N. to E. It drew after it a long and brilliant tail, and vanished in about three minutes, dividing ittelf into three parts, with an explosion that shook the windows in many houses.

General Lally, governor of Pondichery, was lately afrested at Fontainbleau, by order of the French king, and sent to the Bastile. Soon after the officers of the garrison of Pondichery, to the number of sixty, transmitted nine articles of impeachment against him, for embezzlement and misbehaviour. It is said that no less than 12 officers have been, in a few days, privately put to death in that state prison for misbehaviour.

14th. The fleet under the duke of York, and Sir Charles Hardy failed to the westward from Plymouth.

The following inscription is on the monument (now erecting, in Westmin-ster-abbey,) of the honourable Roger Townshen!, Esq; fifth son of the

right honourable the lord viscount Townshend, who lost his life in July 1759, in North America. This monument was erected by a

disconsolate parent,
The lady viscountes Townshend,
To the memory of her fifth son,
The honourable lieutenant colonel
Roger Townshend, who was killed
by a cannon ball, on the 25th of
July 1759, in the 28th year of his

As he was reconnoitring the French lines
At Ticonderago in North America.
From the parent, the brother and the
friend,

His focial and amiable manners;
His enterprizing bravery,
And the integrity of his heart,
May claim the tribute of affliction.
Yet stranger! weep not;

For the premature his death,

His life was glorious;

Enrolling him with the names of those immortal statesmen and commanders,

Whose wisdom and intrepidity, In the course of this comprehensive and successful war,

Have extended the commerce,
Enlarged the dominion,
And upheld the majesty of these
kingdoms,

Beyond the idea of any former age.

Eleven fishermen have been killed and 17 wounded, at Carpoon, a small island at the entrance of the straits of Belleisle, by the Eskimaux Indians. (See our last vol. p. [182.])

His majesty went this day to the house of Peers, and opened the session of parliament with a most gracious speech.

His majesty went in a new state coah, of which the following is a description.

The carriage is composed of sour Tritons, who support the body by cables fastened to the roots of their fins: the two placed on the front of the carriage, bear the driver on their shoulders, and are represented in the action of sounding shells to

announce the approach of the monarch of the fea; and those on the back part, carry the imperial fasces, topt with tridents instead of the ancient fasces. The driver's foot-board is a large scollop shell, supported by bunches of reeds, and other marine plants. The pole represents a bundle of lances, and the wheels are imitated from those of the ancient triumphal chariots. The body of the coach is composed of eight palm-trees, which, branching out at the top, fustain the roof. The four angular trees are loaded with trophies, allusive to the victories obtained by Britain during the course of the present glorious war. the center of the roof fland three boys, representing the Genii of England, Scotland, and Ireland, supporting with their heads the imperial crown, and holding in their hands the scepter, the sword of state, and enfigns of knighthood: their bodies are adorned with feftoons of laurel, which fall from thence towards the four corners of the roof. The intervals between the palm-trees which form the body of the coach, are filled in the upper parts with plates of glass, and below with pannels adorned with paintings. On the front pannel is represented Britannia seated on a throne, holding in her hand a staff of liberty, attended by religion, juftice, wisdom, valour, fortitude, and victory, presenting her with a garland of laurel: on the back pannel, Neptune issaing from his palace, drawn by sea-horses, attended by the winds, the rivers, Tritons, Naiads, &c. bringing the tribute of the world to the British shore. On one of the doors are represented Mars, Minerva, and Mercury, Supporting the imperial crown of Britain; and on the other, industry and integrity,

giving a cornucopia to the genis of England. The other four prenels represent the liberal arts and sciences protected; history record ing the reports of fame; and peace burning the implements of war, The infide of the coach is line with crimfon velvet richly embroidered with gold. All the wood work is triple gilt, and all the paint ings highly varnished. ness is of crimfon velvet, adorned with buckles and other embeliaments of filver gilt; and the faddle-cloths are of blue velvet, embroidered and fringed with gold. fome time ago published by the Prussian governor of Freyberg.
Whereas I have been informed that some of the inhabitants of Freyberg, and particularly certain merchants, have taken it into their

heads to forge, and publish for true, reports to the disadvantage of the arms of Prussia; I declare by these presents, that the first, who shall dare to utter one sentence, either to the disadvantage, or the advantage of the Prussian arms, shall be

taken up and punished as a spy. 'It is an indecency not to be falfered for burghers to presume to talk of state affairs, in which such pitiful creatures can do neither good nor harm : they only expole their ill intentions : but, I shall certainly employ rigorous methods to make an example in terrorem. Every burgher, who favours the defertion of any of my men, shall be treated as a deferter himself. The magistrates will take care to curb the burghers, with more vigilance than hitherto: otherwise I shall make them answerable for all the malevolent reports that may be published because it is their bufiness to watch over the conduct of the merchants

. 4

elongs not to fuch as they are to ntermeddle in the affairs of war or eace, and much less in the good or bad success of the belligerent nowers.'

Mr. Seaton's poetical prize, at Cambridge, is adjudged to he Rev. Mr. Scott of Trinity colege.

ege. Extract of a letter from Berne, dated Oct. 2c.

'The engine for eradicating trees s brought to fuch a degree of perection in this country, that the peaant, who invented it, has engaged to tear up 2000 oaks with it, withna fortnight, at nine-pence sterl. for each oak. He has pulled up spwards of 300 in one day, with wo engines and five men for both only. Our fociety has ordered a model to be made of it, to be fent byour fociety for promoting arts commerce, which will be more complete than the rude draught afer which theirs was made last fum-

A large fum has been subscribed for carrying into execution the farther laudable and publick-spirited views of the marine fociety. Mr. Hicks, a merchant who died lately at Hamburgh, has left them his whole fortune, amounting to upwards of twenty thousand pounds. All which, it feems, that useful society intend to apply towards procuring employment, and till that can be had, relief for the boys who may be discharged from the navy in consequence of a peace, the wages of faid boys being too small to enable them to lay by any part

The following receipt was lately communicated to the Dublin society, by Mr. Wil. Newby, jun. of Ken-

dal, in Westmoreland, being an easy and expeditious manner of taking off all forts of plants on paper. -Take a flat cushion of about fix inches square, covered with leather. and another of a round kind, bound up fo as to form a handle to it; lay on the flat one fome printing ink. and level it with the round one; lay any leaf between them, and press it gently, that the ink may be equally divided at each fide, then put it between two white papers, and press it with the palm of your hand, and the impression will remain. printing ink is made of three parts drying linfeed oil, one part turpentine oil, brought to a proper con-

fistency with lamb-black.

As some labourers were lately trenching near Polesworth, in Warwickshire, they found a large earthen pot full of small copper coins, most part of which appear to bear a beautiful image of Constantine, with the name of Constantinus round it; on the other fide are two armed figures defending Roman emblems of various forts, and round them the words Gloria exercitus. Some few among them have an armed head on one fide, with URBS ROMA round it, and Romulus and Remus fitting under a wolf on the reverse fide; others have an armed head on one fide, with the word Constantinopolis round it, and Pallas on the reverse: fome have a chariot and four horfes on the reversed fide; others variety of fingle figures, fomething like Britannia with her shield; others a woman with a child in her arms. The workmanship of all the heads appears to be of a much more curious stile than that of many coins of a later date: some are so obliterated, that the inscription can't be understood: it is certain they are

very

very old, fince the freshest of them feem to be those of Constantine, the

first Christian emperor.

The following are the dimensions of an ox lately flaughtered at Cowbridge, in the county of Glamorcan, in which county he was also bred. The four quarters of this beaft, which for fize might, with much greater propriety, have been supposed to have belonged to an elephant, weighed 1642 lb. hide 161, tallow 148. His height was fix feet three inches, his length from head to tail seventeen feet feven inches. He fold on the spot for twenty pounds.

Extract of a letter from a gentleman

at Rome, Oct. 16, 1762. "Nothing gives me more fatisfaction than to find fo many fine things purchased for his majesty [the king of Great Britain of late, in Italy. He is now master of the best collection of drawings in the world, having purchased two or three capital collections in Rome; the last, elonging to cardinal Albani, for 14,000 crowns, confisting of 300 large volumes, one third of which are original drawings of the first mafters: the others, collections of the most capital engravings .- And lately there has been purchased for his majesty, all the museum of Mr. Smith, at Venice, confishing of his library, prints, drawings, defigns, &c .- I think it is highly probable, that the arts and sciences will flourish in Great Britain, under the protection and encouragement of a monarch, who is himfelf an excellent judge of merit and tafte, in the vertù.

And we have at present in Rome, of our own country, many ingenious and excellent artifts in the different branches of painting, fculp-

ture, and architecture. In this an ingenious gentleman, Mr. Byn obtained a prize in the first ch and has, greatly to his honour, p two medals from the academy St. Luke.

The grand gallery at Florence lately ran a rifk of being entire confumed by fire : however, re happily, only a few things were lo and fome damaged. The noble groupe of the Laocoon and his for an excellent copy by Bandinelli from the original, in the Belviden is quite destroyed."

Translation of part of an inte-P____ to count Finckenffei handed about in Holland.

" So, the poor emperor of Rufia is dethroned by his wife; this was expected. The empress has great deal of wit, no religion, as prefs; but, at the faid time, p tends to be very devout. This the counter part of Zeno the Greet emperor, his spouse Ariadne, and Mary of Medicis. The late charcellor B- was the great favourit of this princess; and as he had a strong liking to English guiness, I am in hopes that the present connections will continue. The poor emperor wanted to imitate Peter L but had not his genius."

A number of people furrounded the house of John Pritchers, of West Langdon in Kent, and under a notion of her bewitch ing one Ladd, a boy of 13 years old, dragged out his wife by violence, and compelled her to go to the faid Ladd's father's house, about a mile from her own, where the forced her into the room where the boy was, scratched her arms and face in a most cruel manner, w

raw blood, as they faid, of the vitch, and then threatened to fwim er; but some people of condition nterpofing, the poor woman's life vas happily preferved; and the erions concerned in carrying on he imposture, particularly one leard, and Ladd's wife, being caried before a magistrate, and comelled to make fatisfaction to the nhappy injured woman, the mob ifperfed, and the country that was very where in tumult is again uieted. The boy pretended to oid needles and pins from his body, and his father and mother pheld the deceit, and collected arge fums of money of those, whose compassion was excited by so meancholy a fituation.

The fociety for the encouragenent of arts, have adjudged a first remium, of 15 guineas, to Mr. athan Spilfbury, of Ruffel-court, mait painter, for a mezzotinto he of the earl of Carlifle, done by him from a painting of Mr. Rey-

Peter Annett was, by 20th. judgment of the court of King's Bench, committed to Newgate for one month. He was also ordered to stand in the pillory twice, within that time, and afterwards to be kept to hard labour in Bridewell, for a year, &c. for writing a piece called The Free Enquirer.

As three French men of war, viz. the Contente of 64 guns, and two frigates, the Pleiade and the Minerve, were lately chafing his majesty's thip the Sheernets into Villa Franca, the Minerve, by the ill management of the crew, frock upon a rock, and in less than two hours afterwards was entirely loft. The fea ran fo very high, that

VOL. V.

no boats would venture out from the shore to the affistance of the people on the wreck. In this fituation, capt. Clarke fent his people to their relief, who exerted themfelves fo effectually, as to bring them all off, except about 25, who were carried away by the violence of the furf. The French commodore waited afterwards upon the British captain, to thank him for his timely affiftance, and to express the great fense he entertained of fuch benevolence and generofity.

They write from Paris, that one of their ablest mathematicians is going to give public lectures in one of the colleges of the univerfity, on ship-building and navigation.

Though the war between the Corficans and the Genoese is not generally interesting, yet the following circumstance cannot be omitted. A nephew of Gian Carlo, one of Paoli's principal officers, having been taken prifoner, was generoully fet at liberty by gen. Matra. The youth, on his return to Paoli, was made governor of the fort of Cofcia, built by the rebels to cut off the communication of the Genoese with Macinaggio. As foon as he had taken possession of his new command, to tellify his gratitude to Matra, he delivered up to him the fort with which he had been entrafted by Paoli, and which is fo firong, that it cannot be eafily retaken. The poffession of it makes the Genoese masters of all Cape Corfe.

A premium of five guiness was lately given by the Dublin fociety for the following receipt to kill rats. One quart of oatmeal, four drops of rhodium, one grain of mule, two nuts of nux vomica, the whole made very fine, and placed where

TETAT

the rats frequent, and continued

A button maker's wife, near Birmingham, was lately delivered of three children.

A farmer's wife, at Whitstable, in Kent, of two girls and a boy.

DECEMBER.

A cause was tried at the 6th Common Pleas, Westminfter, wherein a merchant of London was plaintiff, and a baronet defendant: the action was brought against the defendant, for winning a fum of money of the plaintiff at gaming, and a verdict given for the plaintiff, for 700 l. damages, be-fides costs of fuit.

Biddeford, Dec. 5. Last night, happening to be walking about a quarter before nine, I instantly faw the streets so illuminated, as could not be equalled by a meridian fun. I immediately cast my eyes upwards, and, to my very great surprize, saw falling a luminous body, or flaming

meteor, equal in magnitude to the moon. This meteor, when it fif appeared to me, was in a right line with the bright ftar in Hiron which I imagine was near the plan of its commencement, fince the fudden blazing, which it occasion ed, must instantaneously attract a amazed eye. It performed its de. feent gradually, so as to fall about ten degrees in four or five fecondi, leaving behind it a long tail, or feeming liquid flame, which fubtended, from one extreme to the other, an angle of about ten degrees; that part of the tail next to the body feemed to blaze like the meteor itself; but the other extreme turned blue and fmoaky The body diminished or burnt out by degrees to support the tail, whose extremity continued to vanish into smoak, till the whole body was diffolved, which happened to be in a line with the bright far in Orion shoulder, from whence the direction of its path is known. The tall continued to burn bright for about a minute afterwards, and the fire feemed to vanish last of all at that end, where it first had its begin ning; but the brightness and ferpentine form continued for five of fix minutes, though only as a bright cloud. The atmosphere, at the beginning of this extraordinary phat nomenon, was extremely clear, and inclinable to freeze; but after the body was dissolved, a thick smoke descended from its path to the ho rizon; which disappeared in about a quarter of an hour. This meteory which was, I believe, by far the greatest seen for half a century past, must have kindled very near the earth's furface, otherwise the blazing would not be great enough to datzle the strongest eye.

land carriage to London, has acceeded beyond the expectation f most people, and therefore we ive, in the appendix to the chroicle, the present fate of it at ength, as published by the inspector ptain Blake. ball

Was the most numerous house of commons that has known this year, in order to kinto confideration the prelimivarticles of peace; when they mapproved by a very great may. Mr. Pitt was present, tho' sible to fland, and was, by the dalgence of the house, permitted speak fitting. The addresses prented on this occasion to his majeby both houses, are among our ate Papers.

ranslation of a letter from the empress of Russia to M. d'Alembert, at Paris, whom the had invited into Ruffia to educate her fon.

" Mr. d'Alembert,

"I have just received the answer on wrote to Mr. Odar, in which ou refuse to transplant yourself to lift in the education of my fon. I ally conceive that it costs a philoopher, like you, nothing to despise hat the world calls grandeur and onour: thefe, in your eyes, are ery little; and I can readily agree hat they are fo. Confidering hings in this light, there would be

nothing great in the behaviour of queen Christina [of Sweden] which hath been fo highly extolled; and often censured with more justice. But to be born and called to contribute to the happines, and even the instruction of a whole nation, and yet decline it, is, in my opinion, refusing to do that good which you wish to do. Your philosophy is founded in a love to mankind: permit me then to tell you, that to refuse to serve mankind, whilft it is in your power, is to miss your aim. I know you too well to be a good man, to ascribe your refusal to vanity. I know that the fole motive of it is the love of ease, and leifure to cultivate letters and the friendthip of those you esteem. But what is there in this objection? Come, with all your friends; I promise both them and you, every conveniency and advantage that depends upon me; and perhaps you will find more liberty and ease here, than in your native country. You refused the invitation of the king of Prussia, notwithstanding your obligations to him; but that prince I own to you, that I has no fon. have the education of my fon fo much at heart, and I think you fo pecessary to it, that perhaps I pres you with too much earnefiness. Excuse my indiscretion for the sake of the occasion of it; and be affured that it is my efteem for you that makes me fo urgent.

Molcow, CATHERINE. Nov. 3, 1762.

In this whole letter I have argued only from what I have found in your writings :. you would not contradict yourself."

The prize question for the year 1764, proposed to the literati of all nations by the Berlin academy of

feiences and belles lettres, is, When the fovereignty of the Grecian emperors at Rome totally ceafed. What was then the government of the Romans? And at what time was the papal fovereignty eftabliffed ?"-The prize is a gold medal of 60 ducats weight : the effays to be transmitted before the ift of January, 1764, directed to Mr. Forney, fecretary to the academy; a motto to be put to them, and inclosed a fealed note, containing the motto, the author's name, and place of abode. The academy's judgment will be declared at the public meeting of the 31st of May, 1764.

The academy farther gives notice, that the author of a fatisfactory memoir on the following subject, which was to have been determined this year, is, at whatever time it shall be sent, entitled to the prize: "An explanation of Hearing, relatively to the manner in which the perception of Sound is produced, in virtue of the inward

texture of the Ear."

The sessions ended at the 13th, Old Bailey, when three received sentence of death; 26 received sentence of transportation for seven years; three to be branded in the hand; 34 acquitted; 12 discharged by proclamation, and three remanded back to take their trials at the assizes for Surry and Radnor. Two for the murder of their bastard children, were acquitted, the circumstances being favourable in both cases.

Among the felons for transportation was one Derbin, a house-breaker, against whom several indictments were laid; but there appeared no evidence against him thong enough to affect his life. This man carried on his business fystematically, not selling his stolen goods till he had sufficient reasons believe that nobody thought as more of them, and keeping the in the mean time in a house at act siderable distance from that in who he lived, so that in case this hap pened to be discovered, no be could prove they were in his custom

A profecution was lately commenced in Ireland against Mr. Forge for introducing the character of Mr. George Faulkner, printer of the Dublin Journal, a man of proper and character, upon the publishage. After a long hearing, a modicit was given in favour of Mr. Foote was a verely fined.

The following is the receipt gainst the distemper amongs in horned cattle, which rages will great fury in Thuringia, Ersund and other parts of Saxony, as it is prescribed and published by the wand domaine chamber at Mage burg, and which has been admit stered with great success.

Take eight pound of allus eight pound of coriander feeds, eight pound of an herb called chamain or carlina, one pound of black of min feeds, and one pound of chis ney foot. After all these ingre dients are reduced to a powder, with it two measures of falt, give to a full-grown beaft a spoor full at a time, with some sour least dough, and fomething luke-warm You must not give them any this cold to drink, nor cold green eat, and must keep the cattle warm and separate the distempered for the found. Give them no flrong quors, for it las been remarked the it makes them worse."

Paris, Dec. 1, 1762.

"The fate of the Jesuits in the kingdom is at last determined;" least as much as our parliament

n determine it. In fpite of their monftrances against the fairness the quotations made from fometheir writers, and their absolute nunciation of the doctrines conined in fome others; in fpite of ir appeal to the king, and of his giefty's endeavours to put a flop the proceedings of parliament; y, in fpite of the interposition of e nobility, clergy, and burghers feveral places where they had tilements; they have been turned it of their houses, forbid, under e severest penalties, to wear the fuits habit, hold any corresponence with their general, or affemle above four or five in a body. lany of their books have been iblicly burnt, and what may reain of their effects, after fatisfying eintentions of the donors, and a treditors of the order, and a allowance to fuch among imas may be supposed incapable otherwise providing for themlyes, conficated to the king. It faid, indeed, that fome parliaents have come into these meates, merely to avoid disputes with ther parliaments, who claim a juidiction over them. Those faers, however, are not without riends; for prince Charles of Loraine, and feveral corporations in he Auftrian Netherlands, have the fuch, as thought proper to take shelter among them, a favourble reception."

Extract of a letter from Philadelphia, dated Nov. 11. Being an
account of the melancholy difafter that befel the Phoenix, capt.
M Gacher, in lat. 37 N. and
long. 72 W. from London, bound
to Potowmack, in Maryland,
from the coaft of Africa, with

332 flaves on board.

"On Wednesday the 20th of

October, 1762, at fix o'clock in the evening, came on a most violent . gale of wind at fouth, with thunder and lightning, the fun running very high, when the thip fprung a leak, and we were obliged to lie . too under bare poles, the water gained on us, with both pumps conflantly working. At ten, P. M. endeavoured to put the ship before the wind to no purpose. At twelve: the fand ballaft having choaked our pumps, and there being feven feet water in the hold, all the casks afloat, and the ballaft shifted to leeward, cut away the rigging of the main and mizen masts, both which went inflantly close by the deck, and immediately after the fore mast was carried away about 20 feet above. Hove overboard all our guns, upon which the ship righted a little. We were then under a necessity of letting all our flaves out of irons, to affift in pumping and baling.

Thursday morning being moderate, having gained about three feet on the ship, we found every cask in the hold slove to pieces, fo that we only faved a barrel of flour, 10 lb. of bread, 25 gallons of wine, beer and shrub, and 25 gallons of fpirits. The feamen and flaves were employed all this day in pumping and baling; the pumps were frequently choaked, and brought up great quantities of fand. We were obliged to hoift one of the pumps up, and put it down the quarter deck hatchway. A ship this day bore down upon us, and, though very near, and we making every fignal of diffres, she would not speak to us.

On Friday the men flaves being very fullen and unruly, having had no fustenance of any kind for 48 hours, except a dram, we put one

half

[1] 3

half of the ftrongest of them in Mackey, and fome gentlemen, polices; themanal and bearing fengers he had on board, treat

On Saturday and Sunday all hands, night and day, could fcarce keep the thip clear, and were con-

frantly under armsug stavel in 1000

On Monday morning many of the flaves had got out of irons, and were attempting to break up the gratings; and the feamen not daring to go down the hold to clear our pumps, we were obliged, for the prefervation of our own lives, to kill 50 of the ringleaders, and floutest of them.

It is impossible to describe the mifery the poor flaves underwent, hav-Ing had no fresh water for five days. Their dismal cries and shricks, and most frightful looks, added a great deal to our misfortunes; four of them were found dead, and one drowned herself in the hold. This evening the water gained on us, and three feamen dropt down with fatigue and thirst, which could not be quenched, though wine, rum, and fhrub were given them alternately. On Thursday morning the ship had gained, during the night, above a foot of water, and the feamen quite wore out, and many of them in despair. About ten in in the forenoon we a faw fail; about two the discovered us, and bore down upon us; at five spoke to us, being the King George, of Londonderry, James Mackey, mafter; he immediately promifed to take us on board, and hoisted out his yawl, . it then blowing very fresh. gale increasing, prevented him from faving any thing but the white people's lives (which were 36 in number) not even any of our cloaths, or one flave, the boat being fearce able to live in the fea the laft trip the made. Capt.

Mackey, and fome gentlemen plateness he had on board, tread us with great kindness and humanity."

Two men lately working in a rane at the Custom house, one of hem, without any previous notice, umped out of the wheel, which vent round with such velocity hat his companion was dashed to seeces.

The earl of Bute has presented o Winchester College a bronze late of ther founder William of Wykeham, supposed to have been one in the fourteenth century. It is full length figure, in the episonal habit, sixteen inches high, dexecuted with remarkable element.

Alegacy of 800 l. was paid by the executrixes of Mrs. Isabella minhon, for the use of the county opital at York.

Letters from Spain take notice, hat the king had fettled a pension is 3000 crowns of the widow of Don Velasco, who so bravely deeded Fort Moro; created his son peer of Castile, by the title of harquis de Fort Moro, and had oreted that one ship of the Spanish avy should always bear the name is Velasco. The governor of the Havannah, and the admiral who ommanded the steet at that place, are been ordered to repair to Marid, and an enquiry into their consists already begun.

5th. Being a high festival their majesties, preceded by the eralds, &c. went to the chapel

ad at a former meeting.

royal, and with others of the royal family received the facrament from the bands of the bishop of London, and afterwards made their offerings at the altar, for the benefit of the poor, in several purses. The king's is a byzant, or wedge of gold, value 301.

A most intense frost set in with a north-easterly wind, and continued with very little intermission to the 20th of January, when it broke up by a gentle thaw. Befides the general appearance of nature, fome experiments, tried during the course of it, proved, that it was some days no less severe than that of 1740. Particularly, on the 31st of December a glass of water placed upon & table in the open air, in fix minutes froze so hard as to bear five shillings upon it; a glass of red port wine placed upon the fame table froze in less than two hours; and a glass of brandy in fix, both with hard ice. By the 2d of January the river Thames was completely frozen over at Richmond; as was the Severn in several places; so that, in many places, carriages passed over the ice, and booths were erected and fairs held; the ice being in some parts fix feet thick apply a medi

Below bridge, the river afforded a most melancholy prospect; the ice, stoating up and down with the tide, cut the cables of the shipping, and set whole tiers adrift, many of which were driven on shore, and with their cargoes, damaged, to a great amount. One ship was driven with such violence against London bridge, that her bowsprit beat down upwards of twenty feet of the new stone ballustres. Sea gulls came up as high as London bridge, and birds were driven from their

Librate trup the made 4 [1]

ufual haunts, and were feen, in reat numbers, in the streets of

This fevere frost put a stop to feveral handicraft trades, and to all manner of hulbandry and inland navigation, to that numbers of the poor, who depended upon fuch occupations, were obliged to have recourse to the compassion of the public, and went about the streets driving ploughs, or carrying boats on their thoulders to excite it. At the fame time necessaries of all kinds. except flesh meat, (the graziers pouring their cattle into London for want of fodder) role to fuch a price, as to diffres those who before used to be more at their ease. Collections therefore were fet on foot in most parishes, and all ranks of people, that could afford it, contributed chearfully to them. His maety fent a thousand pound bank note to the bishop of London for that purpose, and the dukes of Newcalle and Bedford, and lord Bute gave between four and five hundred bonds each. Another nobleman, then in the country, is faid, to have provided clothing and all other necessaries for the poor, not only of his own, but of feveral adjacent pafifthes. At last the evil produced in forme degree its own remedy. As the water in the leaden pipes froze, and there was a greater call for that element than usual, on account of the great number of fires, which broke out during this frost; wooden pipes were inferted into the mains in almost every fireet, and these wooden pipes being often lest open, the ice accumulated to fuch a degree, that at length it became danerous to walk the streets, fo that here was a necessity for employing

a great number of hands to de

rith 1

But though by these means for perified for want of food, fever persons were frozen to death in the streets and on the rivers, some of the latter by the ice, on which they we tured, breaking off with them.

This frost has been proportion ably intense, and seems to have let much sooner, in France, Holland and all the other north-east comtries of Europe; whereas in Conwal, Wales, and Ireland, the wather was milder than usual.

It is very remarkable that though great numbers of cattle of all kind perished in the open fields during this frost, feveral sheep, which has pened to be buried in the fnor fallen in some parts to a great dept continued well and alive under five or fix weeks. It was event fured in the foreign papers, that the fervant of an officer travelling in Germany on an open sledge, har ing been left behind on the roat as, in all appearance, frozen a death, recovered his vital heath a fall of fnow, which foon covere him, fo thoroughly and speeding that in three days time he was able to join his mafter.

Though the fires, which broke out during this frost, were ter numerous, scarce a day parti without one, few of them, excent one that happened in the Strand, near Somerset house, were per mitted to get a-head. This, be fides greatly damaging the bad part of faid palace, confumed eigh or nine houses, and a poor lady aged 103, in whose apartments it broke out, while left by herself, unhapit perished in the slames.

A fire likewise broke out in the

ults of St. James's church, and any bodies were burnt before it ould be perfectly extinguished, hich proved a work of great diffulty. It was attributed to the rlessness of some undertakers ferants, in leaving a link burning, or icking it against something, durg an interment there a few days clore.

it in the

Yana

ints by the late bishop Berkeley of the kingdom of Ireland, concerning

fires.

"Whether tiles and plaister may or supply the place of Norway sir, or stooring and wainscot? Whether laister be not warmer, as well as note secure, than deal? And wheter a modern fashionable house, ned with sir, daubed over with oil of paint, be not like a fireship ady to be lighted up by all accitant?"

had of Saving lives at dangerous fires.

"Into the upper part of a winow-frame drive a staple, or screw an iron bolt with an eye. Proide two blocks with two or three ollies in each, (which may be had heap, at any ship block-maker's) als a rope through each pulley of a ength fufficient to reach the ground from the top of the window. Proide also a strong bag or fack, of bout four feet deep, and eighteen oches wide, with a wooden bottom, nd a few hoops to keep the fack pen, as in a hoop-petticoat. When in unhappy occasion requires the se of these, let the hoop of the uper block be hung in the staple; hen the party must stand on the sooden bottom, and draw the fack p about them, and hang the ftring of the fack on the hook of the under lock, when any one person may, with the greatest ease and fafety,

let them down to the fireet; and drawing up the fack again may, in like manner, let down a whole family, women, children, fick, old and infirm; and, and at last, lower himself down, by only holding the fame rope in his own hand.

The most tender and timorous must be convinced of the ease and safety of this operation, by recollecting that it is the very same with that, by which, the most delicate ladies, when they make a visit on board large ships, without any danger, are hoisted up in a chair from their boat, and replaced there again.

Copy of a letter from New-York, Nov. 30, 1762.

" Since I wrote to you, one of our privateers has fent in a prize here, taken out of a fleet of Frenchmen, bound from Cape Francois to France: this fleet confisted of about 25 fail of merchant veffels under convoy of three king's frigates, and a merchant frigate of 18 guns. Three privateers belonging to this place, and foun West India privateers cruizing together. first fell in with them. In the night they took five vellets out of the fleet: and next day, commodore Keppel, who was cruizing there with feven men of war, appeared in fight of the French fleet, and, with the privateers, has taken every one of them. Commodore Keppel has carried the four frigates and eighteen merchantmen to lamaica: They are all richly laden with fugar, coffee, and indigo. Three more are ordered here, and expected every hour."

In the course of the war we have taken from the French 18 ships of the line, and 36 frigates, and destroyed 14 ships and 13 frigates,

and they have loft by accidents 5 thips and 6 frigates; fo that on the whole their navy has been deprived of 37 capital ships, and 55 frigates. From the Spaniards we have taken 12 thips and four frigates. Our lofs has been only a frigates taken, and 3 destroyed, and 13 ships and

14 frigates loft by accident.

That we may lose no time in exciting the gratitude of the public, towards that brave body, which to effectually contributed to put a speedy and glorious end to the war, by the ever memorable reduction of the Havannah, we give our readers the following specimen, of the unparalleled hardships they were now fuffering in their return to Europe, though some of the facts mentioned in it properly belong to the year

1763.

On the 3d of November, admiral Pocock fet fail with the transports (in all about 60) from the Havannah. For three weeks they had a fine passage, and were within 200 leagues of the lands-end, when the wind coming about to the east, and blowing a ftorm, they were dispersed and driven out of their course, many of them leaky and ill provided, and unable either to make land, or keep the fea; in this wretched condition feveral perished; the Marlborough bore away in the utmost distress for Lisbon, and providentially was discovered by the Antelope from Newfoundland, just as the ship was ready to founder, fifty men at the pumps having worked night and day incessantly, till the whole crew was spent with fatigue, and unable to have subfifted one night longer; the Temple man of war went to the bottom, but her crew were preferved; the Devonhire shared the same fate; the

Culloden, if not perifhed, has file fered the utmost diftress ; 12 of the transports went to the bottom, and the fufferings of those who rode out, are not to be conceived; me duced by famine, and wasted by a tigue, the men appeared like skels. tons, and more than half of the died of thirst, fickness, and fatigue, Many of the ships beat the seas for near a month after they had made the land; and being leaky and worm-eaten when they left the Ha vannah, the continual apprehenfions of death were as terrible in many as death itself. The admin himself did not reach land till the 13th of January, when he arrived at Portimouth. It is computed that befides what perished in the passage home, the conquest of the Havas nah has cost the nation upwards of ten thousand men.

Some time ago a man having stolen a sheep at Mitcham in Surry, tied its hind legs together, and put them over his forehead to carry away; but in getting over a gate, the sheep it, is thought, struggled and by a fudden fpring, flipped in feet down to his throat; for they were found in that posture, the shee hanging on one fide of the gate, and the man dead on the other.

There is now living in Yorkshire, one Robert Oglebie, a tinker, who at this time travels the country for a livelihood, who was born Nov. 6, 1657, as appears by the register book in the parish of Rippon, in Yorkshire. He is a tall, upright thin man, and fays, he was married to his wife feventy-three years, by whom he had twelve boys and thirteen girls, and that she lived to the age of 106. He can hear, and fee to work, as well as ever he did in his life. Died.

Died lately, Mrs. Basser at Halne-house, near Exeter; who, it is id, has lest to the hospitals of Bath d E e er 500l, each, and 400l. to e poor of sour parishes in Cornall and Devonshire.

Translation of a letter wrote by prince Ferdinand to general Sporcken, on resigning to him the command of the allied army in Germany; containing his serene highness's thanks to the said army, and likewise his majesty's letter of thanks to his serene highness.

Having had the honour, on my arrival at Neuhaus, to write to the king to congratulate him on the peace he had made with France and Spain, and at the fame time to alk his permission to quit his army,

pleased to give me a very favourable answer, in the following let-

where my presence is no longer ne-

ter :

rer; which I fend you, general, to be communicated to the army.

Confin,

I thank you for the obliging congratulations in your letter of the 23d past, on the happy conclusion of the peace, to which your good conduct at the head of my army hath to greatly contributed. I readily confent to your demand, much fangue, you will enjoy, in the bosom of peace, that glary which you have fo justly acquired. Being, moreover, convinced how much I owe to your great merit, you may be affored of my perfevering in these sentiments, being, with much efteem and devotion, coufin, your devoted coufin,

St. James's Hill ...

Dec. 3, 1762. GEORGE R."
"In confequence of this permission which his majesty has gracionily given me, I relign to general Spercken the command of the army, which I shall leave to-morrow the 24th of December. I am the better satisfied, as his majesty has condescended to repeat to me his approbation of my conduct : of the favours with which you honoured me during the time that I commanded the army. I shall never forget with how great and happy fuccess I fought at the head of the brave troops that composed the army, for liberty, and for their constry and mine. This I shall always remember, and it will make me think continually on the obligations I owe to the generals and officers in particular, who, by affifting me with their experience and their good advice, enabled me to ferve my country, and to discharge, at the same time, the trust with to tall, and then making of the

which I was honoured by the king I therefore defire, general, that you will return them my fincere than and that you will also thank, in me name, the whole army, for the obedience they paid to me whilf! had the honour to command them Neubaus, Dec. FERDINAND 23, 1762. Duke of Brunfwick!

pas,

The marquis of Granby's letter thanks to the British forces Germany. Dated Munfter, Jan. w " Lord Granby has hoped a have had it in his power to have feen and taken his leave of the troops, before their embarkation for England; but a fevere illness have ing detained him at Warbourg, and his prefent flate of health obliging him to take another rout, he could not leave this country without the public testimony of his entire in probation of their conduct, fince has had the honour of commanding them.

These fentiments naturally ca for his utmost acknowledgments He therefore returns his warme thanks to the generals, officers, and private men, composing the whole British corps, for the bravery, zeal, discipline, and good conduct he la conflantly experienced from every individual; and his most particular and personal thanks are due to the for their ready obedience, upon occasions, to fuch orders at his fa tion obliged him to give.

His best endeavours have always been directed to their good, M every means in his power; and he has the fatisfaction to think he has fome reason to flatter himself d their being convinced, if not of the efficacy, at least of the fincerity of his intentions, if he may judge by the noble return their behaviour be

de him; a behaviour that, while fills him with gratitude, endeared em to their king and country, and a covered them with glory and

Highly sensible of their merit, he all continue, while he lives, to ok upon it as much his duty, as will for ever be his inclination, to we them every possible proof of affection and esteem; which he ould be happy to make as apparent as their valour has been, and till be, conspicuous and exemplary after ages.

n account of the extraordinary ceremonies observed, on account of the special specience, at the installation of his royal highness prince William and the earl of Bute, as hights of the garter, at Windsor, Sept. 22, 1762.

HE infallation was preceded by the ceremony of the bishop salisbury's taking the oaths as hancellor of the order, after which is majesty put the gold chain with the badge, about his neck, and devered the purse to him, &c.

When the fovereign and the mights had retired to their stalls, Garter, with the usual reverences, ook up the banner of the late foereign, and holding it up, immeliately Clarenceux and Norroy, kings of arms, joined, and making their reverences, repaired to his royal highness the duke of Cumberland, and his royal highness the duke of York, the two fenior knights; who thereupon joined, and making their banner from Garter, and being preteded by the two kings of arms, advanced to the first step, or haut-Pas, where they repeated their reverences, and coming to the rail, made one to the altar; then kneeling, they delivered the banner to the prelate, who, affifted by the prebends, placed it upright at the fouth-end of the altar.

In the mean time, according to his majesty's particular directions, all the other knights, as attending the offering of the sovereign's banner, advanced from under their banners, and made their double reverences: The two knights who made the offering returning with reverences as before under their banners.

The sword of the late sovereign was then delivered by Garter to their royal highnesses, and offered in like manner; and then the helm and crest; which being done, their royal hignesses returned, and went into their stalls.

After the two new knights were installed, divine service began.

And at the words of the offertory, Let your light so shine, the organs playing, the officers of the ward-robe spread a carpet on the steps before the altar, and Black Rod making his obeisances, went up to the rails of the altar, on the tight-side, where he received from the yeoman of the wardrobe, a rich carpet and cushion, which, with the affishance of the yeoman, he laid down for the sovereign to kneel upon.

In the mean time Garter fummoned the knights from their stalls, beginning with the junior, each knight making his reverences in his stall, and repeating the same with his companion in the choir, retired under his banner.

All the knights flanding under their banners.

The fovereign, making his reverence to the altar, descended from his stall, and then making another

udge by viour has made reverence, proceeded to the offering.vite

As the procession passed the duke of Newcaftle, the fenior knight (not of the blood royal) who was to deliver the offering to the foveplacing himself a little behind his majely on the right-fide, and coming against the lord chamberlain's stall, he came from under his banner, going on the left-fide of his majefty.

The fovereign coming to the rails of the altar, Black Rod delivered the offering on his knee to the knight, who presented it to the fovereign; and his majesty taking off his cap, and kneeling, put the offering into the bason held by the prelate, affifted by the prebends.

The fovereign then rifing, made one reverence to the altar, and being in his stall, another: the lord chamberlain, and the knights who delivered the offering, retiring behind their banners, when they came opposite to them in the return.

Dinner being ended, the knights placed themselves on either fide, at the upper end of the hall; and grace being faid by the prelate, and the fovereign having washed, the knights all together made their reverences to his majesty, who put off his cap and re-faluted them; and a procession was made back to the prefence chamber, in the fame order they came from thence.

An authentic narrative of the death of Mark Anthony Calas, and of the trial and execution of his father, John Calas, for the supposed murder of his son. From the From the

OHN CALAS was a merchant of the city of Touloufe; where he had been fettled, and lived in good repute, forty ye he married an English woman French extraction, her grands, ther being of the family of Gard Montesquieu, and related to chief nobleffe of Languedoc.

oors; of

On the 13th of October 1761, Gober la Vaisse, a young gentleabout nineteen years of age, fon of La Vaisse, a celebrated ocate of Toulouse, having been time at Bordeaux, came back foulouse to see his father; but ig that his father was gone to untry-house, at some distance the city, he went to feveral s, endeavouring to hire a horse carry him thither. No horse, vever, was to be hired; and at five o'clock in the evening vas met by John Calas, the fa-, and the eldest fon Mark Anly, who was his friend. Calas, father, invited him to supper, he could not fet out for his fais that night, and La Vaisse fented. All three therefore proded to Calas's house together, when they came thither, findthat Mrs. Calas was still in her room, which she had not quitthat day, La Vaisse went up to her. After the first compliments, told her, he was to sup with her her husband's invitation; she exfled her satisfaction, and a few utes after left him, to give some ers to her maid: When that was e, the went to look for her son

Anthohy, whom she found sitting alone in the shop, very pensive; she gave him some money, and defired him to go and buy some Roquefort cheese, he being always the market man for cheese, as he knew how to buy it good better than any other of the family.

She then returned to her guest. La Vaisse, who very soon after went again to the livery-stable, to see if any horse was come in, that he might secure it for the next morning.

In a short time Anthony returned, having bought the cheese, and La Vaisse also coming back about the same time, the samily and their guest sat down to supper in a room up one pair of stairs, the whole company consisting of Calas the father and his wife, Anthony and Peter Calas, the sons, and La Vaisse the guest, no other person being in the house except the maid servant, who has been already mentioned.

It was now about feven o'clock; the supper was not long; but before it was over, or, according to the French expression, auben they came to the desert, Anthony left the table, and went into the kitchen, which was on the same floor, as he uled to do; the maid alked him if he was a-cold; he answered, Quite the contrary; I burn; and then left her: In the mean time his friend and the family left the room they had fupped in, and went into a bedchamber: the father and M. La Vaisse sat down together on a sofa; the younger fon Peter in an elbow chair, and the mother in another chair; and without making any enquiry after Anthony, continued in conversation together till between nine and ten o'clock, when La Vaisse took his leave, and Peter, whody he had been lett

who had fallen afleep, was awaked to attend him with a light.

On the ground-floor of Calas's house was a shop and a warehouse; the warehouse was divided from the shop by a pair of folding doors : When Peter Calas and La Vaisse came down flairs into the shop, they were extremely shocked to fee Anthony hanging in his shirt, from a bar which he had laid arofs the top of the two folding doors, having half opened them for that purpose. Upon discovery of this horrid spectacle, they shrieked out, and the cry brought down Calas the father, she mother being feized with fuch a terror as kept her trembling in the paffage above. The unhappy old man rushed forward, and taking the body in his arms, the bar to which the rope that suspended him was fastened, slipped off from the folding doors of the warehouse, and fell down : Having placed the body on the ground, he loofed and took off the cord, in an agony of grief and anguish not to be expressed, weeping, trembling, and deploring himself and his child. The two young men, his fecond fon and La Vaisse, who had not had prefence of mind enough to attempt taking down the body, were flanding by, flupid with amazement and horror; in the mean time the mother, hearing the confused cries and complaints of her hufband, and finding nobody coming to her, found means to get down stairs. At the bottom the found La Vaisse, and haftily and eagerly demanded what was the matter; this question rouzed him in a moment, and inflead of answering her, he urged her to go again up flairs, to which, with much reluctance, the confented; but the conflict of her being fuch as could not be borne, the fent down the Jannet, to fee what was the me when the maid discovered what happened, the continued be either because she feared to carn account of it to her miftress, or cause she busied herself in doings good office to her mafter, who still embracing the body of his and bathing it in his tears. mother therefore, being thus alone, went down, and mixed the scene, that has been alm described, with fuch emotions must naturally produce. In mean time, Peter had been fent La Moire, a surgeon in the me bourhood; La Moire was no home, but his apprentice, M. Gn came instantly: Upon examina he found the body quite dead; upon taking off the neckel which was of black taffety, he the mark of the cord, and is diately pronounced, that the ceafed had been strangled. particular had not been told; the poor old man, when Peters going for La Moire, cried " Save at least the honour of family; do not go and spread port that your brother has a away with himself."

The poor father, therefore, who overwhelmed with grief for the is of his child, was advised by friends to fend for the officers of ce, to prevent his being torn pieces for having murdered him. This was accordingly done: One u dispatched to the Capitoul, one wid, the first magistrate of the olice, or principal civil magistrate the place; and another to an nferior officer, called an affessor; he Capitoul was already fet out, ring been alarmed by the rusour of a murder, before the mefer fent from Calas's got to his use: He entered the house with VOL. V.

40 foldiers, took the father, Peter the fon, the mother, La Vaisse, and the maid, all into cuftody, and fet a guard over them: He fent for M. de la Tour, a physician, and M. La Marque and Perronet, surgeous, who examined the body for marks of violence, but found none except the mark of the ligature on the neck; they found also the hair of the deceased done up in the usual manner, perfectly smooth, and without the least disorder; his cloaths also were regularly folded up, and laid upon the counter, nor was his shirt either torn or unbuttoned.

Notwithstanding these appearances, David thought sit to give into the opinion of the mob, and took it into his head that old Calas had sent for La Vaisse, telling him he had a son to be hanged, that La Vaisse had come to perform the office of executioner, and that the father and the brother had assisted him in it.

The body, by order of this poor ignorant bigot, was carried to the town-house with the cloaths. father and fon were thrown into a dark dungeon; and the mother, La Vaisse, the maid, and Casing, were imprisoned in one that admitted the light. The next day, what is called the verbal process, was taken at the Town-house, instead of the spot where the body was found, as the law directs, and was dated at Calas's house, to conceal the irregularity: This verbal process is somewhat like our coroner's inquest; witnesses are examined, and the magistrate makes his report, which is the fame there as the verdict of the coroner's jury with us. The witnesses examined by this Capitoul were the phyfician and furgeon, who proved [K]Anthony

Anthony Calas to have been ftrangled; the furgeon, having been ordered to examine the stomach of the deceased, deposed also, that the food which was found there had been taken four hours before his death: As no proof of the supposed fact could be procured, the Capitoul had recourse to a Monitory, in which the crime was taken for granted, and all persons were required to give such testimony concerning it as they were able, particularizing the points to which they were to speak. This Monitory recites, that La Vaisse was commissioned by the Protestants to be their executioner in ordinary, when any of their children were to be hanged for changing their religion; it recites alfo, that when Protestants thus hang their children, they compel them to kneel, and one of the interrogatories was, whether any perfon had feen Anthony Calas kneel before his father when he strangled him; it recites too, that Anthony died a Roman Catholic, and requires evidence of his Catholicism: These ridiculous opinions being thus adopted and published by the principal magistrate of a confiderable city, the church of Geneva thought itself obliged to fend an attestation of its abhorrence of opinions fo abominable and abfurd, and of its aftonishment that they should be suspected of such opinions, by perfons whose rank and office required them to have more knowledge and better judgment.

But before this Monitory was published, the mob had got a notion that Anthony Calas was the next day to have entered into the confraternity of the White Peniadopted this opinion also, without fentence of the Capitoul as in tents. The Capitoul immediately

the least examination, and order Anthony's body to be buried the middle of St. Stephen's church which was done; forty priefts, a all the White Penitents affifting the funeral procession.

When the trial came on, the ngman, who had been carried to las's house, and shewn the folding ors and the bat, deposed, that it simpossible Anthony should hang mfelf as was pretended; another tness swore that they looked thro' e key hole of Calas's door into dark room, where they faw men nning hastily to and fro; a third ore, that his wife had told him, at a woman, named Mandrill. d told her, that a certain woman known had declared she heard the ies of Mark Anthony Calas at the ther end of the city. Upon such idence as this, the majority of the rliament were of opinion, that father and mother ordered La ife to hang their fon, and that ther fon and a maid-fervant, who 1 good Catholic, had affisted to do it.

One La Borde presided at the who had zealoufly espoused popular prejudices, and though was manifest to demonstration that prisoners were either all innot, or all guilty, he voted that efather should first fuffer the torte ordinary and extraordinary, to kover his accomplices, and be broken alive upon the wheel, receive the last stroke when he laid two hours, and then to be mt to ashes. In this opinion he d the concurrence of fix others, ree were for the torture alone, were of opinion that they ald endeavour to ascertain upon e spot whether Anthony could himself or not, and one voted equit the prisoner. After long ites, the majority was for the

experiment, whether he was guilty or not, hoping he would, in his agony, confess the crime, and accuse the other prisoners, whose fate, therefore, they fuspended: It is, however, certain, that if they had had evidence against the father that would have justified the sentence they pronounced against him, that very evidence would have justified the fame fentence against the rest, and that if they could not juftly condemn the reft, they could not justly condemn him, for they were all in the house together when Anthony died, all concurred in declaring he hanged himself, which those who did not help to hang him, if hanged by others, could have had no motive to do, nor could any of the prisoners have hanged him by violence, without the knowledge of the reft.

Poor Calas, however, an old man of fixty-eight, was condemned to this dreadful punishment alone; he suffered the torture with great constancy, and was led to execution in a frame of mind which excited the admiration of all that faw him.

Two Dominicans, father Bourges and father Caldagues, who attended him in his last moments, wished, "their latter end might be like his," and declared that they thought him not only wholly innocent of the crime laid to his charge, but an exemplary instance of true christian patience, fortitude, and charity.

were for the torture alone, were of opinion that they addendeavour to ascertain upon spot whether Anthony could be uttered no complaint. Being at length placed on the wheel, to wait for the majority was for the moment which was to end this life and his misery together, he expressed the father by way of hope of an happy immortality, and

[K] 2 a com-

a compassionate regard for the judges who had condemned him. When he faw the executioner preparing to give him the last stroke, he made a fresh declaration of his innocence to father Bourges, but while the words were yet in his mouth, the Capitoul, the author of this catastrophe, and who came upon the scaffold merely to gratify his defire of being a witness of his punishment and death, ran up to him and bawled out, Wretch, there are the faggots which are to reduce your body to ashes; speak the truth. Mr. Calas made no reply, but turned his head a little afide, and that moment the executioner did his office.

Though the testimony of a dying man had thus acquitted the rest of the prisoners, yet the judges, that they might act with an uniform absurdity through the whole affair, banished Peter Calas for life, and acquitted the rest. The widow and the other sufferers are seeking such sedres from the king as can now be had, to whom the sentence of the judge was not sent for confirmation as it ought to have been.

The judges have thought fit to fuppress the trial; the widow petitions that it may be ordered to be laid before the parliament of

Paris for a revision.

Some account of the murder of Anne Naylor, by Sarah Metyard, and her daughter Sarah Morgan Metyard.

IN the year 1758, Sarah Metyard, the mother, kept a little haberdasher's shop in Bruton-street, Hanover-square, and her daughter, then about 19 years old, lived with her; their chief business was making silk nets, purses, and mittins, and they took parish children appartice. They had then five, had delphia Dowley, about to peold; Sarah Hinchman, about Anne Nailor, about 13; Mary, fifter, about eight; and Anne hawhose age does not appear; but Hinchman is said to have been biggest girl, she was probably more than 10.

These children were kept to m in a small flip of a room, foch that their breath, and the heat their bodies, made it suffocating unwholfome, and they were only treated with unkindness feverity, but were not allowed in ficient food : As it was natural suppose they would complain, ther punishment became necessi and they were fuffered to go out doors but once a fortnight, and were never alone. Anne Na had a whitloe upon her finger, bad, that it was obliged to be the off, and, being befides a weak for ly child, the became particula obnoxious to the inhumanity avarice of the petty tyrant, whom the was condemned to be Here. Inc

Being almost worn out by a lot feries of ill-treatment, the girl length, ran away, but was for brought back; after this, the treated with yet greater ferent and kept fo short of food, that in ing her strength decay, she watch for an opportunity to run away second time; but this was now come very difficult, for the mot and daughter being apprehenfire fuch an attempt, and dreading confequences of a complaint, mere than the lofs of the girl, w careful to keep the ftreet door fil and their unhappy victim in the per part of the house.

t happened, however, that on 29th of September, the watchthe door's being opened for the kman, and creeping down stairs, k the opportunity of the daughs back being turned, to flip out; the daughter milling her while was yet in fight, called out to e her stopped, and the milkn, as the was running with what ogth the had left, caught her in arms: The poor child expostued with the man, and preffed with a moving earnestness, to her go; Pray milkman, fays fhe, me go, for I bave bad no victuals long time, and if I flay bere, I Il be flarved to death; by this the daughter was come up, the milkman having no power detain the child, and it being imfible for her to escape, she fell into the hands of her merciitrants; and the daughter havdragged her into the house by neck, flapped too the door, and n forced her up stairs into the m, where the old woman was Il in bed, though the had started and joined in the cry, upon the it alarm. Here the was thrown on the bed, and the old woman eld her down by the head, while e daughter beat her with the adle of a hearth-broom; after is, the was forced in a two pair flairs back room, and a ftring ing tied round her waift, the was lade fast to the door, with her ads bound behind her, so that she eld neither lie nor fit down. In is manner the was kept flanding ithout food or drink for three ays, being untied only at night at the might go to bed, and the it night the was fo feeble, that the as obliged to crawl up to bed pon her hands and knees; during

this time, the other children were ordered to work in the room by her, that they might be deterred from attempting to escape, by seeing the punishment that was inslicted upon one who had thus offended already.

The first day, she said little, her strength failing her apace, the next day, she said nothing, but the pains of death coming on, she groaned piteously; on the third day, soon after she was tied up her strength wholly failed her, and fhe funk down, hanging double in the ftring which bound her by the waist: The children being then frighted, ran to the top of the flairs, and called out, Miss Sally! Miss Sally! Nanny does not move; the daughter came up stairs, and found her without any appearance of fense or motion, hanging by the ftring with her head and her feet together; but the was fo far from being touched with pity, that the cried out, If the does not move, I'll warrant I'll make ber move, and immediately began to beat her with the heel of her shoe : finding, however, notwithstanding the blows, which were very hard, that the poor wretch shewed no figns of fenfibility, fear took the alarm, and the haftily called up her mother. When the old woman came up, she fat down upon the garret stairs, at the door where the child was still hanging, and the string being at length cut, she laid her across her lap, and sent Sally Hinchman down stairs for some drops: When the drops were brought, the girls were all fent down stairs, and the mother and daughter were foon convinced that their victim was dead.

Having consulted together, they carried the body up stairs into the fore-garret, next to that where the

ANNUAL REGISTER [134]

child used to lie, and locked the door that the other children might not fee it. They pretended the had had a fit, from which the foon recovered, and for two or three days they infinuated, that the was confined in the garret to prevent her running away, having made a third attempt to escape; and the mother herself, in fight of the children, took victuals and carried it up into the garret, pretending it was Nan-

ny's dinner.

On the fourth day, the body being stripped, was locked up in a box; and, in confequence of a plan concerted between the mother and daughter, the garret door was left open when the children were fent down to dinner, and the ffreet door was also opened and left a-jar ; when they were at dinner, the mother faid to the daughter, Hark! Sally, don't you bear a noise, go and fee what it is; to which the daughter, as had been agreed, replied, there is no noise, and continued at table; then faid the old woman to Sally Hinchman, Go and fetch Nanny down, she shall dine below to-day; Hinchman went up, and finding the garret door open, and the child not there, ran back frighted, and faid, Madam, Nanny is not there-Run down then, faid the old woman. and look below; upon this several of the children ran down, and finding the fireet door also open, came up, and told what they had feen - Aye, faid the old woman, then she is run away at last; and it was she that I beard, when I mentioned the noise; girls, did you not bear a noise? O! law madum, faid the poor children, implicitly concurring in an opinion they did not dare to contradict, so que did.

Thus they hoped to account forth child's absence to her fellow-pm tices, who were not, however, w out suspicions; one of them in m ticular, observed, that if she run away, the had run away withou her shoes, of which she was know to have had but one pair, and the were found in the garret foon a the supposed escape; another marked, that they had all her sin in the wash, and that it was a likely the should escape withou either shift or shoes: The old w man hearing this whilpered, ful That the ewent without ber fores for fear of being beard to go down flan and that if she could but get into the street, she would not mind being but foot; the shifts she could not readily account for, and a period who lodged in the house, have asked what was become of Name was answered by her fifler, that was dead. The lodger was fan fied with the answer, having a fuspicion that her death was t natural; but the mother hearing it, asked Molly Nailor, Who to her that her fifter was dead? them plied, Philly Dowley, one of fellow-prentices: Philly, therefor was sharply reproved. Molly foon after destroyed as her filter ha been, and the horrid fecret fet with the mother and daughter.

It became necessary, however, " keep the children out of the gu ret, for the body was become ver offentive; they were therefore at dered not to wash their hands the as ofual, but to wash them in kitchen, and the garret door kept locked. But, at the end of two months, the putrefaction was fo great, that the whole house was infected, and it became absolutely necessary to remove the body.

The old woman, therefore, took e body out of the box, and cut it pieces, thinking it more easy to spose of it in parts than whole; endeavoured to cut off the head, it could not; she therefore tied the head and body in a piece of sown cloth, which was part of the ed furniture, and the limbs in anther piece of the same, except the and which had lost a singer, that ing so remarkable, as to make articlar caution necessary.

dy. Th

This was on the 5th of Decemer, the depth of winter, when the ights were dark and long, and all eing thus far in readiness, the hildren were feat to bed : the d woman then fetched down the and which wanted the finger, and unt it, but her fear was so little ixed with remorfe or pity, that corfed the unhappy creature e had murdered, because her ies were to long in confuming, nd comforted herfelf at the fame ine, by faying, that the fire told o tales : fhe woold have burnt he rest of the body, but was afraid of alarming the neighbours by the mell; the therefore, the fame night, ok the two bundles, and carried them to the great gully hole in Chick-lane, where the kennel water ans into the common shore, whence it falls into the Thames. When he came thither, the took them out of the cloths, and endeavoured to throw them piece-meal over the wall, behind which the common there is open, but could not; the therefore threw them down in the mud and water before the grate, and returned home.

About twelve o'clock the fame night, the mangled body was feen where Metyard had left it, by two watchmen, who gave notice of it

to the constable, who went immediately to the overfeer of the parish; St. Andrew's, Holbourn, and defired he would come and remove it: the overfeer went with the conftable and watchmen to the place, and all the parts of the body being collected, except the hand, it was carried to the workhouse; the next day Mr. Umfreville, the coroner, was acquainted with it, who directed the parts to be put together and washed, which being done, he came, and having taken a view of it, he gave a warrant for its burial, without fummoning any jury, probably supposing it had been in the hands of fome furgeon.

Thus was the child murdered, and the body disposed of without raising any suspicion; no enquiry was made or apprehended, and the murderers were in the hands only of each other.

They had, however, always lived upon very ill terms, and though the daughter was between 19 and 20 years old, the mother wied frequently to beat her; the daughter, hoping to terrify the mother into better behaviour, would, when thus provoked, threaten to accuse her of the murder, and make herfelf an evidence to prove it, supposing that the mother's testimony would not then be admitted against her : this rendered their animofities more bitter; fometimes fhe urged the mother to let her go to service, and fometimes declared the would drown herfelf. The mother always opposed her going to service, because the found her affiltance necessary in her bufiness, and confidered her talk about drowning herfelf, as the mere unmeaning ravings of paffion, which, as foon as the passion subfided, were thought of no more.

[K] 4

Thus

Thus they continued to hate, to reproach, and to termenteach other, till about two years after the child had been dead; when one Mr. Rooker, who appears to have been a dealer in tea, took a lodging in their house.

Rooker observed, that the daughter was very ill treated by the mother, who still continued to beat her, and, after lodging with them about three months, he took a house the upper end of Hill-street, Berkeley-square; and, when he went away, he took the daughter in mere

compassion as a servant.

The old woman, upon the daughter's leaving her, became quite outrageous; the went almost every day to Rooker's, and abused both him and the girl in the most opprobrious terms, and with fuch clamour and vehemence as frequently to breed a riot about the door; this, however, in compassion to the girl, he endured patiently at first, hoping time would put an end to it. It was not long before a little place fell to him at Ealing, and he immediately quitted his house in town, and went to live there, taking the girl with him; but the mother, neither foftened by time, nor discouraged by dince, followed her thither, and continued her abuse with yet more malice and vociferation. When orders were given to refuse her admittance, the forced her way in, and, at other times, behaved in fuch a manner before the house, that to let her in was thought the least evil of the two. Rooker was loaded with reproaches, and the girl was often cruelly beaten. It is probable that the would have been killed if affistance had not been at hand, for the was once found forced up into a corner by the mother,

who, having torn off her cap handkerchief, and greatly but and foratched her face, had a hold of a pointed knife, which was aiming at her breaft. To continued till the oth of June hand, it had been observed that the height of their quarrels, madoubtful and mysterious expression were used that intimated some for of importance between them.

The mother used to a Rooker, "The old persumen dog," and the daughter would a ply, Mother, remember you are persumer, alluding to her have kept the child's body in a box a it could not be endured: at our times the daughter, when proceed, would say, You are the Chilane ghost; remember the gully in Chick-lane.

These obscure hints made Room uneasy; and one day, after the man ther was gone, he urged the gill pressingly to tell what they mean that, with many tears, and grareluctance, she gave him an a count of the murder, begging the same time, that it might be secret.

As by this account the gild not appear to be any otherways to pable than by concealing the mether's crime, and as Mr. Room supposed also that the fact cool not be-proved without her evident, he immediately wrote an account of what he had learnt, to the officers of the parish of Tottenhallers of the parish of Tottenhallers of the parish of Tottenhallers of the parish of the method been put out an apprendict that a prosecution against the mether might be commenced.

In confequence of this letter, the parish officers applied to Sir John Fielding, at whose house they were met by Rooker and the daughter,

proper persons were fent to ing the mother and her apprene foon brought, with Dowley and inchman, two of the girls who red with her when the murder s committed : the daughter's exnination was taken, which conined a very full, direct, and clear arge against the mother, who was erefore committed to New Prison; e girls were fent for farther exaination to the workhouse of St. eorge, Hanover-square, and the ughter was dismissed: but the other and the apprentices being ramined a fecond and third time, ne evidence came out which affied the daughter, who was therere committed to the Gatehouse on e cth of July.

Bills of indictment were foon affound against both mother and mghter, and the evidence of the

a them both. On the 16th of July they were rought to their trial at the fessions one in the Old Bailey, when the o girls deposed, that the deceased as tied up and cruelly beaten by he daughter, and kept without iduals, till the died, by the joint onlent of both daughter and moher. Mr. Rooker deposed, that he daughter related the circumances of the murder to him as the ad related them in her examinaion, and told him, that the mutiated hand was burnt, and the rest f the body thrown into the gullyole in Chick-lane. The conftable proved that all the corps, except the and, was found there; and Rooker lso deposed, that the children who ived with her, when he lived in her house, were ill treated.

net by Rooker and the of

The mother, in her defence, alledged, that the deceafed was fickly, and was therefore kept apart from the reft; that the had a fit, from which she was recovered by hartshorn drops, and that foon after fhe ran away. The daughter gave a long and circumstantial account of the whole transaction, but imputed all the guilt to the mother. She faid, that the night before the child died, the entreated her mother to fend her some victuals, which she refused with many oaths and execrations; that she, the daughter, did not tye her, nor know the was tyed the last morning; that she generally gave the children victuals by stealth, for which her mother. when she discovered it, nsed to upbraid and to beat her; that after Nanny died, she urged the mother to have the body buried, which the mother refused, calling her fool, and faying, That the body, upon view, would how that the child had been starved; that the mother orged her to affift in cutting it to pieces. which she refused; and used to threaten if ever the spoke of it, that the would fwear first and become an evidence against her; she also denied that she ever beat the children, and declared that the had fuffered much from the mother's cruelty, because she would not be the instrument of it against them.

If this, however, had been true, the girls, on whose testimony she was convicted, would have had no motive to depose against her; they necessarily would have loved her in proportion as they hated the old woman; and as they could have no interest in according her, neither could they have had any inclination, t phuot some sea all

They were, after a long trial, both convicted, and received fentence of death; but, even after this there continued fo bitter an animofity between them, that it was neceffary to confine them apart.

Both denied the charge con-Rantly and invariably, but with this difference; the mother declared the child was not starved, and the daughter declared the mother flarved her; fo that though the daughter accused the mother, the mother did not accuse the daughter. The daughter also pleaded pregnancy, but a jury of matrons declared the was not pregpant as an war or burn where any

They were both overwhelmed with a fense of their condition, and about fix o'clock in the evening before the execution, the mother, who had neither eaten or drank for some time, fell into convultions, and continued speechless and insensible till her death. The daughter, though the was present when this happened, took no notice of it, but continued her conversation with a friend who was come to take leave of herman in the state of the state of the

The daughter perfifted to the last in declaring herfelf innocent of all but concealing the murder, which the extenuated by faying, She thought it was her duty. What could I do, Jays she, it was my mother ! She also solemnly declared, that she had no criminal connection with any man, particularly with Mr. Rooker, whom yet the always mencioned rather as a friend than a mafter; and that though the pleaded pregnancy, it was only done as an expedient to gain a short respite, not knowing that a jury would determine the fact immediately. This declaration been confirmed by the testimon fome perfons who were prefer the diffection of her body; and is faid, that though a little wor the was remarkably pretty, and a form extremely delicate, and proportioned.

The mother was executed in 44th, and the daughter in the 14

year of her age.

Some account of a remarkable fine committed by John and John Kello.

JOHN KELLO was 26 years a John Came of in partnership with a gentler from Virginia about three years as his brother Joseph swore at trial; but it does not appear to this partnership produced him m than one remittance of gool. three years. From his coming of to his being apprehended he li in Bloomfbury, and Joseph w during the fame time, clerk to Charles More of Aldermanter and fwore that for the last years a half he supported not only h felf but his brother John, thou when questioned by John at trial, it appeared he had recent above 30 guineas of him to his debts.

Joseph had before ferved an a prenticeship to Mr. John Howell Blackwell-hall factor, and dun that apprenticeship he became quainted with Mr Joseph Cott who was also then apprentice to packer, and used to be fent by mafter to affiff Kello.

Mr. Cotton, coming into be ness for himself, still continued

usintance with Kello, who used be continually backwards and wards at his house in Aldermany, where Kello also lived.

Mr. Cotton, at this time, did a od deal of business for Mr. Pardge in the preffing and packing y, was conversant in his other inches of bufinefs, and greatly ited by him, fo that Kello had eat opportunities of becoming acainted with Mr. Partridge's afrs, but did not know him pernally.

The two brothers being necessius, conceived a design of obtaing money by forgery above a year o, but could not determine in hole name to practife the fraud. leph's acquaintance with Mr. Parge's affairs, by Mr. Cotton's tans, at length determined them

practife it on him. With this view Joseph took an portunity to take a draft of Mr. tridge's from a file in his counthouse, and from this draft he ged another, in the following

Meff. Amyand, Staples, and Mercer. August 28, 1762.

Pay to Bearer a thousand Pounds. 1000. W. Partridge.

He had before forged several hers, all for a thousand pounds, ut the resemblance was not thought

great as in this.

The 28th of August, the day of the ate of the note, was Saturday, and Joph Kello had learnt of Mr. Cotton, atMr. Partridge would, on that day, to Harlow, and in his way dine Woodford. He and his brother ohn, therefore, determining that his was an opportunity not to be of, went together to the Red-lion chonse in Moorfields, where John ello wrote the following letter in Mr. Partridge's name to Mr. Cot-

Woodford, Aug. 28, 1762.

Mr. Cotton,

" Receive, the inclosed draught yourself in bank, and carry it directly under cover, directed for Mr. Rous, to be left at the bar of Sam's coffeebouse; leave the bill with the banker: should not this come time enough this evening, be fure carry it early, as above, on Monday, but don't fail this evening, if possible. Your's,

Wm. Partridge."

When the body of the letter was written by John, who, it should feem, had, by some means, learnt alfo to imitate Mr. Partridge's hand, fofeph counterfeited the name to it, and dated it: they then inclosed in it the draught for 1000 l. and, to give it colour, a forged bill of exchange for 350 l. supposed to be from a clothier, in favour of Mr. Partridge.

The letters, with the draft and bill, were then put into a cover, which they directed to Mr. Cotton. at Mr. Elliot's, in Aldermanbury; and as they could procure no wax at the ale-house, they went to a flationer's in White-Chapel, where they bought a flick, and where they also borrowed the use of a seal, and

fealed up their packet.

It was now about five o'clock, and the business being thus far dispatched, Joseph Kello went immediately to Mr. Cotton, whom he found at his ware-house contiguous to Mr. Partridge's house; and soon after his brother John, with whom he had left the letter, fent it from the change by a porter, as directed.

When Cotton received the letter, Joseph Kello was with him: he asked the porter whence he brought it, who answered, from a gentleman

who gave it him in the street, and

that it required no answer.

When he had read the letter, and examined the draught and bill it contained, having no suspicion of forgery, as the fimilitude was very great, he immediately fet about obeying Mr. Partridge's orders. It was now about near the time when bankers flut up their shops; for expedition's fake, therefore, Kello directed a blank cover to Mr. Rous, with which Cotton ran to Mr. Amyand's, taking with him the draught and bill : he happened to find Mr. Mercer, one of the partners, who expressed some surprize at his coming fo late, but however, gave him a bank note for 1000 l, in exchange for the draught.

This bank note he inclosed in the cover directed by Joseph Kello, and borrowing a wafer in the shop, fealed it, and went himfelf with it to Sam's coffee-house, in Exchangealley, being well acquainted with a gentleman whose name was Rous, who lived at Hackney, and for whom he supposed the bank note was intended by Mr. Partridge.

He afked for the mafter or miftress of the house, but both were abroad; he then left the cover, with the note fealed up in it, at the bar, but did not leave the house.

Having waited there three hours, and nobody coming for the letter, he took it back from the waiter, and left a paper instead of it at the bar, on which he wrote, The letter for Mr. Rous is at J. Cotton's, Al-dermanbury: he then went home, where he found Joseph Kello still waiting, for he would not venture to call or fend for the letter till he knew Cotton was returned from the

Kello afked him if he had left

the letter; and he faid, No, he afraid, Kello then went to his he ther, who was waiting to know he matters went on, at Seymor coffee-houle in Pope's-head-ale It was there agreed that John show fend a verbal message by a chin man to Cotton, from the Artigal lican, defiring him to deliver him the letter that was to han been left at Sam's for Mr. Rous,

Kello then hafted back again a Cotton, and foon after the chairma

came for the letter.

Mr. Cotton faid he would gos long with him, and fee the gente man to whom the letter was to be delivered; he did fo; and the nie tress of the house told him the gen tleman was gone, but would is turn in ten minutes: for John Ke lo had the precaution not to fa in the house, but to watch the po ter's return, and fee whether h came alone.

Cotton then fat down, waitin the return of the gentleman; a having flayed till near 12 o'clot returned again back with the lett and note, leaving a billet at t coffee-house, purporting, that the letter should be delivered the na morning at Mr. Rous's at Hackar, by 10 o'clock.

At his return, he found Ja Kello still waiting, who asked if a had left the parcel: he said, No. Why, fays Kello, Mr. Partridge will be very angry; you don't know the confequence of not leaving it. Con ton, however, still continued fun in his intention of carrying it his self to Hackney, in the morning and immediately wrote a letter Mr. Partridge, telling him what had done, and what he intended a do; with which he and Kella both went to the Post-office; and it be

the money Suc

g past twelve, Cotton gave fix-nce to have it received.

Jos. Kello lay with Cotton that ght; and in the morning he got before fix, and went to his b:oer John, and acquainted him with hat had happened, and with Coton's intention of carrying the note

Hackney.

It was then agreed that another tter should be written to Mr. Cotn, as from Partridge, to acquaint im that he had learnt by express hat he (Cotton) had not acted areeable to the direction in the first tter, and defiring that he would ave the note at Sam's without de-

Joseph Kello leaving his brother write and fend the letter, remed to Cotton, whom he found ting out for Hackney, and fet with him, in order, if possible, find some means of delay. otton had proposed to call at the mat London Wall, and while ey were drinking a pot of beer ello pretended to have forgotten is handkerchief, and made an exfe to go back and fetch it. In ldermanbury he was told by Mr. attridge's porter, that there was a tter left for Mr. Cotton, and he rected the porter to carry it to ondon Wall, where Cotton, still as, to whom he might deliver

This firatagem produced the dered effect. Mr. Cotton, upon ading the contents, carried the tter with the bank note in it to the offee-house, and returned to Alderanbury to Kello, shewing him the tter he had received, and telling m what he had done.

As the body of the letter was nitten by John, and the name by oleph, Joseph took care to destroy it, and after dining with Mr. Cotton, he went and acquainted John, that the note was left at the coffeehouse, and that he might now receive it. This he presently did, and then both went into the fields by Sadler's-wells, where they opened the letter, and found the note. About fix they agreed to meet at John's lodgings, at the Crown coffee-house, Peter-street, Bloomsbury, and there they talked of different ways of getting it exchanged. At length it was concluded that the prisoner should go to Bristol as the most eligible place, but, having no money, Joseph borrowed ten guineas of a relation, and on Tuesday morning the prisoner set out in a post-chaise for Bristol.

On Friday, Sept. 3, Mr. Culverwell, the landlord of the King's head, at Bridgewater, applied to Mr. Baker, clerk to the general receiver for the county of Somerfet, for money for a 1000 l. bank-note. and Mr. Baker told out 888 guineas, and 2s. which together with three small notes, one of 301. one of 251. and one of 10l. made the fum of 9971. 10s. and 5s. per hundred, to wit, 2l. 10s. for exchange, compleated the whole fum of a roool. Mr. Culverwell examined the cash, and the prisoner appeared as the owner of the note, and received the money as it was retold, Mr. Baker asked the prisoner his name, that he might enter it in his book; and he faid, John Hyndman.

The prisoner, having now succeeded to his wish, instead of endeavouring to make his escape, as he probably might have done from Briftol, returned to Westminster, to the house where one Phobe Laskard lives, in Wood-street. To this woman he gave both the money

and the bills: the money, fealed up in a bag, he pretended to be half-pence, to the amount of about 51. and the bills, he faid, was foreign bills, of no use to any body but himfelf: the bills she afterwards delivered to a porter that was sent for them, and the money was carelesty laid about at one time on the dreffer, and at another time in the window, till at length Sir John Fielding, having got some information where the prisoner might be found, caused him to be apprehended.

The confiable who found him, found also the money in the bag, and when he was examined, the bills were found upon him. The particulars here related were all authentically proved upon his trial; and when he was called upon to make his defence, he endeavoured to throw the whole blame upon the brother, and appealed to the court, which had the appearance of most guilt. The master of the coffee-house where he lived, gave him the character of an extreme sober man, but the jury paid no regard to his former character, but brought in

He was foon afterwards executed at Tyburn, pursuant to his sentence. He behaved, during his confinement, with great obstinacy and indecorum, making little account of religion, and the comforts a christian faith. He said, he had some particular opinions of his own, that he should never quit in his life, nor after it. He is said to have been the son of a mercer in Houndsditch, who gave him a liberal education, and left him about 300 l. with which he equiped himself for Virginia, and having resided there some time returned to

mentioned a wo-

London, and carried on a kind commercial correspondence of some persons there, that produce but little profit; and having up a turn for pleasure than busing his friends had long expected in unlucky issue to his affairs, thouse for fatal as to affect his life. Here about 26 years of age, and in ma respects, what is commonly called a clever fellow.

In this manner of overse she charged one Mr. ---, ofe first wife was her fifter, and th whom the afterwards lived in nication, with having poisoned by putting arfenick in purl, administering it to her, when of the small-pox. Numbers of flons, of fortune and character,

and feveral clergymen, affifted at the vagaries of this invisible knocker and feratcher, and though no difcovery could be made, by the feveral removals of the girl to other houses, where the noises still followed her, (the supposed ghost protesting the would follow her wherever the went) though wainfcots and floorings were torn away, to facilitate a detection of any imposture, to no purpose; yet the rational part of the town could not be brought to believe, but what there was fome fraud in the affair, confidering the known faculty, many people called Ventriloqui have had of uttering strange noises, and making them appear to come from any place they thought proper, without any visible motion of their lips; and this fufpicion was confirmed by the attestations of the clergymen, and some gentlemen of the faculty, who visited the deceased in her illness, and of some other persons of unquestionable credit; and the guilt of the imposture, in fome measure, fixed upon the parents and their friends, by fome fasts contained in the following advertisement.

To the public. We, whose names are under-written, thought it proper, upon the approbation of the lord-mayor, received on Saturday last in the afternoon, to fee Mr. P --- yesterday, and to ask him in respect of the time when his child should be brought to Clerkenwell. He replied in these words, "That he consented to the examination proposed, provided that some persons connected with the girl might be permitted to be there, to divert her in the day-time." This was refused, being contrary to the plan. He then mentioned a wo-

man, whom he affirmed to be unconnected, and not to have been with ber. Upon being fent for, she came, and was a person well known by us to have been constantly with ber, and very intimate with this Familiar, as the is called. Upon this he, Mr. P-, recommended an unexceptionable person, the daughter of a relation, who was a gentleman of fortune. After an enquiry into her character, he informed us, that this unexceptionable person had disobliged her father, and was out at service. Upon this we answered, " Mr. P___, if you can procure any person or persons, of firict character and reputation, who are house-keepers, such will be with pleasure admitted." Upon this he required a little time to feek for fuch a person. Instead of coming, as he promised and we expected, one William Lloyd came by his direction, and faid as fol-

"Mr. Parsons chooses first to confalt with his friends, who are at prefent not in the way, before he gives a positive answer concerning the removal of his daughter to the Rev. Mr. Aldrich's."

> Signed, WILL. LLOYD, Brook-street, Holborn.

Within three hours after, we received another message from Mr. Parsons by the same hand, to wit:

"If the lord-mayor will give his approbation, the child shall be removed to the Rev. Mr. Aldrich's."

The plan before-mentioned was thus fet forth in the public papers: The girl was to be brought to the house of the said clergyman, without any person whatever that had, or was supposed to have, the least connection with her. The fa-

ther was to be there; not full to be in the room, but in a parle where there could be no for communication, attended win proper person. A bed, with any furniture, was to be fet in middle of a large room, and chairs to be placed round it. persons to be present were some the clergy, a physician, surge apothecary, and a justice of peace. The child was to be dreffed, examined, and put tob by a lady of character and fortu Gentlemen of established character both clergy and laity (amo whom was a noble lord, who fired to attend) were to have b present at the examination. have done, and still are ready to every thing in our power, to de an imposture, if any, of the s unhappy tendency, both to the pa lic and individuals.

VOL

STE. ALDRICH, Rector of St. John's, Clerkense JAMES PENN,

Lecturer of St. Ann's, Alderign
In pursuance of the above phe many gentlemen, eminent for the rank and character, by the innt tion of the Rev. Mr. Aldrich, Clerkenwell, affembled at his her the 31st of January, and next appeared the following account what passed on the occasion:

"About ten at night the gend men met in the chamber, in whit the girl, supposed to be disturb by a spirit, had, with proper cation, been put to bed by several dies. They fat rather more than hour, and hearing nothing, we down stairs, where they interrogan the father of the girl, who denis in the strongest terms, any know ledge or belief of fraud. As the supposed spirit had before bliely promifed, by an affirmaknock, that it would attend one the gentlemen into the vault, unthe church of St. John, Clerkenll, where the body is depassited, d give a token of her presence ere by a knock upon her coffin; was therefore determined to make s trial of the existence or veracity the supposed spirit.

While they were enquiring and liberating, they were fummoned to the girl's chamber by some las, who were near her bed, and ohad heard knocks and scratches. hen the gentlemen entered, the I declared that she felt the spirit te a mouse upon her back, and s required to hold her hands out bed; from that time, though the in was very solemnly required to milest its existence by appearance, impression on the hand or body any prefent, by scratches, knocks, my agency, no evidence of any ternatural power was exhibited.

The spirit was then seriously admiled, that the person to whom e promise was made of striking coffin, was then about to vifit vault, and that the performance the promife was then claimed. e company, at one, went into the arch, and the gentleman, to whom e promise was made, went, with more, into the vault : the fpiwas folemnly required to perm its promife; but nothing more in filence enfued. The person profed to be accused by the ghost n went down, with feveral hers, but no effect was perceived. pon their return they examined e girl, but could draw no con-fion from her. Between two d three she desired, and was per-VOL. V.

mitted, to go home with her fa-

It is therefore the opinion of the whole affembly, that the child has fome art of making, or counterfeiting, particular noises, and that there is no agency of any higher cause."

To elude the force of this conclusion, it was given out that the coffin, in which the body of the supposed ghost had been deposited, or at least the body itself, had been displaced, or removed out of the vault. Mr. K --- therefore thought proper to take with him to the vault the undertaker, who buried Miss F----, and such other unprejudiced persons, as on inspection might be able to prove the weakness of such a Tuggestion.

Accordingly on February 25, in the afternoon, Mr. K---, with a clergyman, the undertaker, clerk, and fexton of the parish, and two or three gentlemen, went into the vault; when the undertaker prefently knew the coffin, which was taken from under the others, and eafily feen to be the same, as there was no plate or infcription; and, to fatisfy further, the coffin being opened before Mr. K ---, the body was found in it.

Others, in the mean time, were taking other steps to find out where the fraud, if any, lay. The girl was removed from house to house, and was faid to be constantly attended with the usual noises, though bound and muffled hand and foot; and that without any motion in her lips, and when the appeared afleep. Nay, they were often faid to be heard in rooms at a confiderable distance from that where she lay.

[L]

At last her bed was tied up, in the manner of a hammock, about a yard and a half from the ground, and her hands and feet extended as wide, as they could without injury, and fastened with fillets for two nights fuccessively, during which no noises were heard.

The next day, being preffed to confeß, and being told, that if the knocking and fcratchings were not heard any more, she, her father, and mother, would be fent to Newgate; and half an hour being given her to consider, she desired she might be put to bed, to try if the noises would come : she lay in bed this night much longer than usual; but This was on a Saturno noises. day.

Sunday, being told that the approaching night only would be allowed for a trial, she concealed a board, about four inches broad, and fix long, under her stays. board was used to set the kettle Having got into bed, she told the gentlemen she would bring F --- at fix the next morning.

The master of the house, however, and a friend of his, being informed by the maids, that the girl had taken a board to bed with her, impatiently waited for the appointed hour, when she began to knock and fcratch upon the board; remarking, however, what they themselves were convinced of, that "these noises were not like those which used to be made." She was then told, that she had taken a board to bed; and, on her denying it, fearched, and caught in a lie.

The two gentlemen, who, with the maids, were the only persons present at this scene, sent to a third gentleman, to acquaint him that the whole affair was detected, to defire his immediate attendant but he brought another along wi

Their concurrent opinion was, the the child had been frightened in this attempt, by the threats whi had been made the two preceding nights; and the mafter of the ho also, and his friend, both declare "That the noises, the girl had m that morning, had not the le likeness to the former noises." Pr bably the organs, with which performed these strange noises, we not always in a proper tone for the purpose, and she imagined might be able to supply the pla of them by a piece of board.

At length Mr. K --- thought pr per to vindicate his character in legal way. On the 10th of Ju one Mary Frazer, who, it feen acted as an interpreter between ghoft and those who examined he a clergyman, and a reputable trade man, were tried at Guildhall, b fore Lord Mansfield, by a speci jury, and convicted of a confpir against the life and character of M

K---.

But the court, chufing that M K---, who had been so much jured on this occasion, should recent some reparation by the punishme of the offenders, deferred givi fentence for feven or eight month in hopes the parties might make up in the mean time. Accordings the clergyman and tradelman agree to pay Mr. K --- a round fum, for fay between 5 and 6001. to pe chase their pardon, and were the upon dismissed, with a severe rep mand. The father was ordered be fet in the pillory three time!

he father, appearing to be out is mind at the time he was to fland in the pillory, the exeon of that part of his fentence deferred to another day, when, ell as on the other days of his ling there, the populace took uch compassion of him, that, inlof using him ill, they made a slome collection for him. morning, at two-thirds less than the first price the day before, for the benefit of poor families: and if not fold by twelve at noon the fecond day, were then given to the prisons and workhouses, so that no part thereof might be wasted.

These methods have been hitherto

continued; but the superintendant has found that this proceeding, which was calculated for general benefit, has been perverted to very opposite purposes, and greatly to the disadvantage of this undertaking; feveral dealers in fish having made it their practice (especially fince the weather has been fo cool for the fish to keep good till the next, or succeeding day) to wait for the hour of half price, and then to purchase the fish; which he is informed they fell in their shops the next day, at the fame (and often at a less) price, than that affixed in the morning at the land-carriage places of fale for fish newly arrived; and by this means have had an opportunity of underfelling this plan with its own fish; or, in case no fish arrived by land carriage, to get extraordinary prices for the fame; besides leaving a door open to impositions of another kind.

For these reasons the superintendant finds himself necessitated to make an alteration in his measures, and to direct that no fish be sold at reduced price on the day of their arrival; and thinks it proper to give this notice to the public, lest it should be imagined that such an alteration of measures proceeds from lucrative views, which is not the case, as the fish, which remains after the sale of the first day is over, will be sold the next day at proper prices, according to the state and condition thereof; and care will be

t of the Land-carriage Fishery London, to the end of September 762; Submitted to the public by t Superintendant.

HE superintendant of the landcarriage fish plan, in order that anks of people might reap the th thereof, did, at the comdement of this undertaking, s and fizes of fish to be publicly , at as moderate rates as the re thereof admitted; at which continued till four o'clock in afternoon, and from that hour leven they were reduced to oned, in order that families of midg rank might partake of this rable food, as well as the great opulent, and at leffer prices; what remained after the lasttioned hour, were further reed to half price, for the benefit persons of lower degree; and cover, any furplus quantity left he shutting up the places of sale ight (as has often been the case) e directed to be sprinkled with and exposed to fale the next

[L] 2

taken

ANNUAL REGISTER

taken to distribute what remains unfold, while it is wholesome and fit for use; and which he can with confidence affure the public, has hitherto been done; so that out of 45 tons, or 917 cwt. (the quantity brought from the commencement of this undertaking, between the 16th of May and the 30th of September last, both inclusive) there has not been one cwt. loft, and that unavoidable. Moreover, he may venture to affert, that the prices first affixed in the morning, have been at least one-third, or rather one-half, less than those for which fuch fish were usually fold before this undertaking was fet on foot; not to mention the further benefit which has accrued to the middle and lower rank of people, by the reduced prices, and to the poor, by what has been given away, amounting together to 9311 9 s. 10 d. within the above-mationed time, as appears in the monthly account annexed.

From this account it appears, that e fish fent to the markets at its ft charge, amounted nearly to ool. and if admitted (as it may justice be) that they were rated the first price, one half less than hat they used to be sold for; it Il follow that the public have ped a benefit equal to the aboventioned fum by this undertaking, ides a plentiful supply, and some ity of fish little known in this tropolis before; fuch as brills, ers, dories, and red mullet; and these advantages may be added ar tocol. more, by what was fold

 $[L]_3$

[150] ANNUAL REGISTER

In giving this state to the public, the superintendant thinks it necesfary to take notice, that though there appears but 107 l. 13 s. 2 d. over and above the capital of 3500 l. yet it is to be confidered, that there were at the drawing up this sketch 23 fish machines paid for, and then in use, besides including the fundry expences as above to the 30th of September last; and this appears to him beyond what he could have expected from fuch an undertaking in its infancy, and with the many difficulties to be encountered. It is moreover to be observed, that the above fum of 3607 l. 13 s. 2 d. is not to be understood as cash in hand, the whole being engaged by the fuperintendant for the purpoles of supporting and extending this undertaking, by opening some other ports on the fea coast, for procur-

ing a greater variety of fifth, whi the town feems to defire and a pect; and to that end he has m in use 54 machines, befides made, and making, to com the number 80; with which fuch further encouragement as public may think proper to gi fish of inferior forts may be brown for the benefit of labouring per at moderate prices; more especial if he shall be assisted with a prop place of general sale, where dear and hawkers may be supplied a of the quantities that may occase ally be brought, beyond what i present established place of sales find vent for, agreeable to his ginal plan; the want of which i hitherto been the greatest disade tage he has laboured under in profecution of this undertaking.

10 per cent. on or besore the 20th day of October next.

On the Lottery for 600000 l. (25 per cent. on or before the 21st day of March next. 30 per cent. on or before the 29th day of April next. 30 per cent. on or before the 15th day of July next. Which feveral fums, fo received, shall, by the said tashiers, be paid into the receipt of his majesty's Exthequer, to be applied, from time to time, to such services, as shall then have been voted by this house, in this fession of parliament, and not otherwise; and that every subscriber, who shall pay in the whole of his subscription to the said 11400000 l. on or before the 18th day of September, 1761, shall be allowed a discount, after the rateof 3 l. per cent. per annum, from the day such subscription shall be so compleated, to the 20th day of October next; and that all such persons, as shall make their full payments on the said lottery, shall have their tickets delivered, as soon as they can conveniently be made out.

2. That an additional duty be paid for every barrel of beer, or ale, above fix shillings the barrel (exclu-

five of the duties of excise) brewed by the common brewer, or any other person or persons, who doth, or shall, sell, or tap out, beer or ale, publickly or privately, (to be paid by the common brewer, or by such other person or persons respectively) of three shillings, and so proportionably for a greater or lesser quantity.

DECEMBER 20.

That the annuities which shall be payable, in purfuance of a resolution of this house, of the 18th of this instant December, be charged upon the additional duties upon beer and ale, mentioned in a resolution of this house of the same day, for which the finking sund shall be the collateral security

JANUARY 22, 1761.

That an act made 6 Geo. IId. for encouraging the trade of our fugar colonies, is near expiring, and fit so be continued.

FEBRUARY 5.

1. That, for defraying the charges of his majesty's mints, &c. the duties of 10s. per ton, upon all wines, vinegar, cyder, and beer, imported into Great Britain, which, by an act of 27 Geo. IId. were continued, be further continued for seven years, from the 1st of March, 1761, and until the end of the next session then next ensuing

2. That all the powers, privileges, and advantages, which were granted by the act 18 Charles IId. chap. 5, and are now in force, relating to the mints, and coinage of gold and filver monies, be further con-

tinued for seven years from the said day, &c.

MARCH 3.

That, for raising the sum of one million, granted to his majesty, towards paying off and discharging the debt of the navy, and also the sum of 500000 l, in part of the supply granted to his majesty for naval services, the sum of 1500000 l, be raised by loans or Exchequer bills, to be charged upon the first aids to be granted in the next session of parliament; and such Exchequer bills, if not discharged, with interest thereon, on or before the 25th of March, 1762, to be exchanged and received in payment, in such manner as Exchequer bills have usually been exchanged and received in payment

MARCH 7.

That the sum of 88667 l. 10 s. remaining in the receipt of the Exchequer, being part of the sum of 90000 l. granted to his late majesty, in 1759, upon

loathin, 25 M 332 l. ervice of hifing to

Sum total of the supplies granted by this session 18299153 18 11

From hence we may fee, that if from the fum to-19616119 19 91 tal of the supplies granted by the last preceding 1470000 0 0 fession, we deduct the 800000 l. then granted for the support of the civil lift, and the 670,000 l. then 18146119 19 91 granted to the king of Prussia, the sum total of thesupplies granted by this session, will exceed what was granted by the last in the sum of

153033 19 1

And as to the provisions made by this fession for raifing these supplies, I shall observe, that as soon as the house had, on 21 November, agreed to the two first resolutions of the committee of supply, it was refolved, that the house would, on the 23d, refolve itself into a committee of the whole house, to consider of ways and means for raising the supply granted to his majefty; and the resolutions of this committee, as agreed to by the house, were as follow:

NOVEMBER 24. 1. That, towards raising the Supply granted to his majesty, a land tax of 4 s. in the pound, and no more,

be raised within the space of one year from, &c. 2. That the duties on malt, &c. be further conti-

DECEMBER 15.

nued for one year, &c.

1. That the fum of twelve millions be raised by annuities in manner following: that is to fay, that every contributor to the faid twelve millions shall, for every 100 l. contributed, be intitled to an annuity transferrable at the Bank of England, after the rate of 4 per cent. per annum, for nineteen years, and then to Hand reduced to 3 l. per cent. per annum, redeemable by parliament; and also to an annuity, transferrable at the Bank of England, of 11. per cent. to continue irredeemable for a certain term of 98 years, and then to cease; the faid annuities of 41. per cent. and 11. per cent. to be charged upon the finking fund, to commence from the 5th day of January 1762, and to be payable half yearly on the 5th day of July, and on the 5th day of January in every year; and that the faid 4 per cent. annuities shall be added to, and

made,

nade, one joint stock of transferrable 4 per cene. anuities at the Bank of England, with such other 4
er cent. annuities transferrable at the Bank of Engand, as shall, by any act of this present session of
arliament, be charged upon, and made payable out
of, the finking sund; and that every such contribuor shall, for every sum of 801. per cent. paid in to the
ashiers of the Bank of England, upon account of his
share in the said annuities, after the rate of 41. per
cent. per annum, be entitled to 1001. capital in the
said stock of 41. per cent. annuities; and for every
sum of 201. paid in like manner, upon account of
his share in the said annuities of 11. per cent. shall be
intitled to an annuity of 11. to continue for a certain
term of 98 years, in manner above-mentioned.

That every contributor shall, on, or before, the 23d of this instant December, make a deposit with the cashiers of the Bank of England of 15l. per cent, on such part of the sum, or sums, to be contributed by him towards the said sum of twelve millions, as shall be payable in respect of his share in the said 4 per cent. annuities, and also a deposit of 15l. per cent. on such part of the sum, or sums, so to be contributed, as shall be payable in respect of his share in the said 1l. per cent. annuities, as a security for his making the suture payments respectively, on, or before, the

times herein after limited; that is to fay,

On 9,600,000 l. to be paid in respect of the said.

10 per cent. on or before the 10th day of February next.

10 per cent. on or before the 23d day of March

10 per cent. on or before the 21st day of April next, 10 per cent. on or before the 26th day of May next.

10 per cent. on or before the 23d day of June next.
15 per cent. on or before the 18th day of August

10 per cent. on or before the 17th day of September next.

10 per cent. on or before the 20th day of October next.

On 2,400,000 l. to be paid in respect of the said 1 l. per cent. annuities.

25 per cent. on or before the 10th day of March next.

30 per cent on or before the 12th day of May next. 30 per cent. on or before the 21st day of July next.

Which

Which several sums so received shall, by the said cathiers, be paid into the receipt of his majefty's exchequer, to be applied, from time to time, to fuch fervices as shall then have been voted by this house, in

this fession of parliament, and not otherwise.

And that every contributor who shall pay in the whole of his contribution on account of his share in the faid 4 per cent. annuities, at any time, on or before the 18th day of September next, or on account of his share in the said I per cent. annuities, on or before the 13th day of May next, shall be allowed a difcount after the rate of 3 per cent. per annum on the fum fo compleating his contribution respectively, to be computed from the day of compleating fuch contribution, to the 20th day of October next, in refpect of the fum paid on account of the faid 4 per cent. annuities, and to the 21st day of July next, in respect of the sum paid on account of the 11. per cent. an-12000000 nuities

2. That there shall be paid for every window, or light, in every dwelling house inhabited, of to be inhabited, within the kingdom of Great Britain, which shall contain eight or nine windows, or lights, and no more, the yearly fum of one shilling, for every window, or light, in such house, to commence from the

fifth day of April 1762.

3. That there shall be paid for every window, or light, in every dwelling house as aforesaid, which shall contain ten or eleven windows, or lights, and no more, the yearly fum of fix-pence for each window, or light, in fuch house, over and above all duties chargeable thereupon, to commence from the fifth

day of April 1762. 4. That there shall be paid for every window, or light, in every dwelling house as aforesaid, which shall contain twelve, thirteen, or fourteen windows, or lights, and no more, the yearly fum of one shilling for each window, or light, in such house, over and above all duties chargeable thereupon, to com-

mence from the fifth day of April 1762.

5. That there shall be paid for every window, or light, in every dwelling house as aforesaid, which shall contain fifteen, fixteen, seventeen, eighteen, or nineteen windows, or lights, and no more, the yearly fum of three-pence for each window, or light, in fuch house, over and above all duties chargeable thereupon, to commence from the fifth day of April as making to note ant dilebarged with the 1762.

wards more general, by the refolu-

nashay income the enemy to the laine pa-

My lords and gentlemen, THE public business, for which you were affembled, being now happily concluded, the advanced feason of the year calls upon me to put an end to this session of parliament; which I cannot do, without expressing the highest approbation of the zeal, unanimity, and dif-patch, which have fo fignally appeared in the course of your proceedings.

At the opening of this fession I informed you, that it had been my earnest wish to restore the bleffings of peace to my people; but that it was my fixt resolution, with your concurrence and support, to carry on the war in the most effectual manner, till that defirable object could be obtained upon equitable and honourable conditions. My fentiments in both these respects continue invariably the same, and I have the fatisfaction to find them confirmed by the unanimous voice of my parliament.

The declaration, which motives of humanity have engaged the emperor of Russia to make to all the courts in that alliance, and the great and happy change in the fituation of my ally, the king of Pruffia, gives us just reason to hope, that the other belligerant powers may be induced to entertain the fame pacific dispositions. On the other hand,

our rupture with Spain, notwit flanding my utmost endeavours prevent it, and the violent and m. provoked attack with which is dominions of my ancient ally, a king of Portugal, are threatened fufficiently evince the wisdom m necessity of that firmness and rele lution in my parliament, which has enabled me to continue our militar preparations without the leaft is terruption or delay; and confiden ably to augment my fleets and amies in those parts, in which of enemies can be more fenfibly de treffed. The fignal fuccess of arms, in the conquest of Martinia and the acquifition of many other valuable fettlements in the We Indies, have, under the blefing God, been the happy consequences of these measures. I trust in the of these measures. I trust in the be attended with ftill farther advatages, until the powers at war will us shall be disposed to such term of accommodation, as the digmi and just rights of my crown, future fecurity and commercial is terests of my subjects, will permit me to accept.

Gentlemen of the house of con mons.

When I confider the ample wh plies which you have granted, cannot but lament the heavy be thens, which the necessities of public fervice have obliged you impose upon my people. Fra voured, in every instance, to refin roduit few 10 sinas a

I have the fullest persuasion, that on will continue to diffuse in your veral counties that spirit of conord, which you have yourselves so eadily exerted in parliament: and on may be assured that I will, on my part, return your zeal and affection for my person and government, y a constant attention to whatever may attribute to the ease of my subtes; and that it is my ardent wish, of sound the glories of my reign on be union of my people, and on the welfare and prosperity of these ty kingdoms.

incline the enemy to the same pa-

A negotiation was accordingly begun last year, which proved ineffectual. The war became afterwards more general, by the resolution of the court of Madrid to take part with the enemy, notwithstanding my best endeavours to prevent it.

This, with the unexpected attack of my natural and good ally the king of Portugal, greatly affected our commerce, multiplied the objects of our military operations, and increased our difficulties, by adding to the heavy burthens under which this country already laboured.

My object fill continued the fame, to attain an honourable peace, by purfuing this more extensive war in the most vigorous manner. I embraced therefore an occasion offered me, of renewing the negotiation; but at the same time I exerted so effectually the strength which you had put into my hands, and have been so well served by my fleets and armies in the execution of my plans, that history cannot furnish examples of greater glory, or greater advantages acquired by the arms of this, or any other nation, in fo fhort a period of time. My general prince Ferdinand of Brunswick, and my army in Germany, have gained immortal honour, by many fignal advantages obtained during the course of this campaign, over an enemy superior in numbers. The progress of the French and Spanish arms in Portugal has been stopt; and that -kingdom preserved by the firmness and resolution of its sovereign, and by the military talents of the reigning count La Lippe, seconded by the valour of the troops under his command. Martinico, and other [N] 2 illands

his majesty's most gracious speech to both bouses of parliament, on Nov. 25, 1762.

My lords and gentlemen.

Found, on my accession to the throne, these my kingdoms enaged in a bloody and expensive ar. I resolved to prosecute it ith the utmost vigour; determination between the consent to peace, por just and honourable terms, henever the events of war should

islands in the West Indies, have been conquered; the Havannah, a place of the utmost importance to Spain, is in my possession; and with it great treasures, and a very considerable part of the navy of Spain,

are fallen into our hands.

I cannot mention these atchievements, which reflect fuch honour on my crown, without giving my public testimony to the unwearied perseverance, and unparallelled bra-very of my officers and private men, by fea and land, who, by repeated proofs, have flewn, that no climate, no hardships, no dangers can check the ardour, or reful the

valour of the British arms.

Next to the affiftance of Almighty God, it is owing to their conduct and courage, that my enemies have been brought to accept of peace on fuch terms, as, I trust, will give my parliament entire satisfaction. Preliminary articles have been figned by my minister, with those of France and Spain, which I will order in due time to be laid before you.

The conditions of these are such, that there is not only an immense ferritory added to the empire of Great Britain, but a folid founda-tion laid for the increase of trade and commerce; and the utmost care has been taken to remove all occasions of future disputes between my subjects and those of France and Spain, and thereby to add fecority and permanency to the bleffings of peace.

While I carefully attended to the essential interests of my own kingdoms, I have had the utmost regard to the good faith of my crown, and the interests of my allies. I have made cace for the king of Portugal, ficuring to him all his domi-

nions; and all the territories of in king of Proffia, as well as my other allies in Germany, or elsewhen, occupied by the armies of Frant are to be immediately evacuated,

Gentlemen of the bouse of an mons,

I have ordered the proper ell mates to be laid before you; and shall, without delay, proceed in make reductions to the utmoft ertent, wherever they may be found confiftent with wifdom and found policy. It is the greatest affliction for me to find, that, though the war is at an end, our expences onnot immediately be fo much leffer ed as I defire; but as nothing could have carried us through the gra and arduous difficulties furrounding us, but the most vigorous and a pensive efforts, we must expect for fome time, to feel the consequence of them to a confiderable degree.

My lords and gentlemen,

It was impossible to execute what this nation has To gloriously performed in all parts of the world, without the loss of great number of men. When you consider this loss, whether on the principles d policy or humanity, you will in one of the many reasons which itduced me to enter early into negotiation, fo as to make a confiderable progress in it, before the fitt of many operations was determited; and now to haften the conclufion of it, to prevent the necessity of making preparations for another campaign. As by this peace of territories are greatly augment and new fources opened for trate and manufactures, it is my eares defire, that you would confident fuch methods in the fettlemental our new acquifitions, as fhall me effectually tend to the fecunty of

We could never have carried on his extensive war, without the greatfl union at home. You will find he same union peculiarly necessary, norder to make the best use of the reat advantages acquired by the peace; and to lay the foundation of that economy which we owe to purselves, and to our posterity, and which can alone relieve this nation from the heavy burthens brought upon it by the necessities of this ong and expensive war.

The humble address of the right bon. the lords spiritual and temporal in parliament assembled, Nov. 25, 1762.

Most gracious fovereign,

WE your majesty's most dutiful and loyal subjects, the lords spiritual and temporal, in parliament assembled, beg leave to return your majesty our humble thanks for your most gracious speech from the throne.

Permit us, fir, to take this earliest opportunity, to entreat your majesty to accept our most sincere and fervent congratulations on the birth of an heir to your crown, which adds to your majesty's domestic happiness, and endears your royal confort to the people of these realms; and promites, that, under a prince formed to the arts of government by your majesty's royal example, the civil and religious liber-

ties, the glory, the commerce, and the power of Great Britain, will be

It is with the utmost gratitude that we acknowledge your majesty's unwearied attention to the prosperity and happiness of your people; which made your majesty constantly sollicitious, even amidst the glory of your victories, to deliver them from the burthens of war, by a just and honourable peace. At the same time, we cannot but admire the wisdom, which pointed out to your majesty the most vigorous efforts, as the surest means of procuring this blessing for your people.

people. We beg leave to offer your majesty our humble congratulations on the fignal fuccesses, which have attended your majesty's arms in the course of the present year; on the reduction of the strong island of Martinico; on the conquest of the Havannah, the bulwark of the Spanish colonies, and on the acquisition of so much treasure, and of so great a part of the Spanish marine; on the many advantages obtained in Germany over the arms of France, although superior in numbers, by the able conduct of your majefty's general prince Ferdinand of Brunfwick, and by the valour of the troops under his command; and on the preservation of Portugal from the dangers which threatened instantly to overwhelm that kingdom, and which could not have been fo long withstood, but by the firmpels of its lovereign, by the military talents of the reigning count La Lippe, and by the valour of the troops employed in that fervice. atchievements must be acknowledged to be equal to whatever has been performed in any former year, even of this prosperous war; though a new enemy necessarily made our mitiary operations more extensive, and added new difficulties to those we struggled with before: atchievements which reflect the highest honour on the councils that planned them, on the commanders who carried them into execution, and on the sleets and armies, whose intrepidity no dangers could dismay.

Allow us to express, in the most fervent and grateful manner, our joy and congratulations, that, by these repeated efforts, your majesty has at length compelled your enemies to confent to terms of peace; as well as to offer to your majesty our fincere thanks, for your having informed your parliament, that the preliminary articles are already figned by your majesty's minister, and by those of France and Spain; for your majesty's most gracious asfurances, that you will cause these articles in due time to be laid before them; and for the lights your majesty has been pleased to give concerning the conditions of them, which afford to your people the fairest prospect of future happiness. prosperity, and security.

Your majesty may be affured, that we will not fail on our part, to take, as soon as possible, into our consideration, the proper methods for the settlement of our new acquistions; for improving their commerce, and thereby rendering them useful to the mother country. Truly sensible of the merits of those gallant men, by whose valour these acquisitions have been made, we shall be ready to concur in every reasonable proposition for rewarding them; lamenting at the same time, as we do, the loss of so many

fincere and humble thanks for your

of our fellow-fubjects, by which is national firength is fo much is paired. We cannot sufficiently at mire that wildom, which feized to fortunate hour of reaping the vantages of our victories, while were yet on the fummit of ou glory, and before we had experienced any reverse of fortune. In grateful return of those many bles. fings, which your majefty's rord wildom and fortitude have procured for us, your majesty may derend on our warmest zeal, on our constant endeavours to promote that unanimity your majesty recommend in all our proceedings, and on ou attention to those measures of emnomy, which are the peculiar befinels of times of peace, and which alone can relieve your majely faithful people, from the opprefin burthens of fo long and fo expensive a war.

His majefty's mol gracious answer.

My lords.

This very affectionate and look address gives me the truest satur faction. I thank you heartly for it; as well as for your congratulations at the birth of the prince, my son; and so the regard you express, on this occursion, for the queen.

The chearful and fleady supports my parliament throughout the war, has been attended with uninterrupal success: and the ratification of the preliminary articles will, I trust, some be followed by the completion of past on safe and honourable conditions.

My only wish is, and ever will be to promote the lasting happiness, property, and security of my family people.

WE your majesty's most dutiful and loyal subjects, the comnons of Great Britain in parliament affembled, beg leave to return your majesty the most humble and hearty thanks of this house, for your most gracious speech from the throne.

Permit us, at the fame time, to congratulate your majesty on the auspicious birth of his royal highness the prince of Wales, and the recovery of your royal confort, endeared to this country not only by this important event, but by her

own personal virtues.

We acknowledge, with the utmost gratitude, your majesty's great attention to the welfare of your people in the vigorous profecution of the war, and congratulate your majesty on that happy effect of it, the prospect of such a peace as may give stability and permanency to the bleffings we promise ourselves under your majesty's most auspicious

We affure your majesty, that your faithful commons are truly fenfible of the wisdom with which your plans have been concerted, as well as of the successful zeal with which they have been carried into execution by

your fleets and armies.

The resolution and intrepidity of your majesty's army in Germany, and the military skill and distinguilhed activity of your general prince, Ferdinand of Brunswick, which have obtained fo many fignal advantages over an enemy to fuperior in numbers, are objects of our highest admiration. The stopping the progress of the French and Spanish arms in Portugal, and the preservation of that kingdom, by the

The bumble address of the bouse of firmness and resolution of its sovereign, and by the superior talents and able conduct of the reigning count La Lippe, seconded by the valour of the troops under his command, are events of the highest importance to this nation and its commerce. The reduction of Martinico, fo glorious to your majesty's arms, and the still more glorious and important conquest of the Havannah, by which great treasure, and a very confiderable part of the navy of Spain, are fallen into your majesty's hands, speak the wisdom of your councils, and the valour of those employed in the execution of these great commands, and fill our hearts with gratitude and fatisfaction.

> The publick testimony which your majesty has, therefore, graciously given to the unwearied perfeverance, and unparalleled bravery of your officers and private men, by fea and land, to which, under God, these glorious atchievements are to be attributed, is a no less honourable than deserved reward of their services, and must be an additional recommendation of them to the efteem and gratitude of their country.

Allow us, fir, to thank your majesty for having promised to direct preliminary articles of the peace to be laid before us. And we receive with the greatest fatisfaction the information which your majesty has condescended, in the mean time, to afford us; from which we promise ourselves, that, with your majesty's dominions, our trade will be increased; and that, all occasions of future disputes being removed, the bleffings of peace will be thereby rendered permanent and

We return your majeffy our most fincere and humble thanks for your

great goodness and tender regard for the welfare of your fobjects, in proceeding without delay to the conclusion of the negotiation of peace, fo expedient for this country; and for your gracious intentions, as foon as it shall be concluded, to reduce the public expences.

Your majesty may be affored, that your faithful commons will chearfully affift in the Support of fuch expences as may be still necesfary, with die regard to that ceconomy, which your majefty recommends to us, as far as may be confiftent with wildom and true poli-

A 70 elaten We will not fail to confider of the most effectual methods of fettling our new acquifitions, of fecuring those countries to us, and of improving our commerce and navigation. And, lamenting the lofs of those many brave men who have fal-Ien in this glorious war, we will pay all due attention to the fervices of those who yet remain, by whose valour those acquisitions have been made And we will continue to cultivate that union to which we greatly owe the successes of the war, in order thereby to make the best advantages of peace, and lay the foundation of that oconomy, which we owe to ourfelves and to our pofavowed to be previous to the Virgs

tures of peace by France, and c His majefty's most gracious answer.

Genflemen, namom at a saw this very dutiful and affectionate address; and breceive your congrawations on the hirth of the prince, my son, as a fresh proof of your attachment to my person, and of your regard for the queen. The affurances of your ready Support in Such expences

The address of the archbishop, bishon, and clergy of the province of Can. terbury, in convocation affembles, presented December 4, 1762.

Most gracious sovereign,

WE your majesty's most loyal and dutiful fobjects, the arch bishop, bishops and clergy of the province of Canterbury in convoc tion affembled, beg leave to take the first occasion of jointly congritulating your majefty on the bleffing, for which we have separately offered up our fervent thankfgiving to God, of his wouchfafing, and that fo early, to you and your ercellent confort the queen, a fon to inherit the crown of these realms.

We feel a very fensible pleasure from the increase of your majely's domestic felicity, in the addition of paternal to conjugal tenderness. But our views extend much further! and, as we owe to your august house the preservation of every thing dear to us as men or christians, and have found each of your illus trious ancestors faithful guardiens of all those distinguished advantages, which we enjoy to the height under your majefty's gracious go vernment; fo we truft, that Providence hath defigned us a pledge of the perpetuity of our happines, in giving us a prince descended from fuch progenitors, For we know,

at his hereditary good dispositions. Il be solicitously strengthened and aproved by the daily instruction and example of his parents; who ill compleat their merit to these tions, by forming his youther mind to the love of religion, of berty, of our civil and ecclesiastical constitution; to a judicious zeal or the prosperity of Great Britain, and a fincere benevolence to manind in general.

May these pleasing labours be occessful in the highest degree. May the royal insant grow up in ealth and strength, become the joy and boast of the public by every aluable attainment, delight your najesties by the most affectionate lety and gratitude, through an uncommon length of days mercifully granted you; and, born at the dawning of peace, may he see all his life, the people of this land reaping the beneficial fruits of it to the atmost.

It shall be our conscientious care to remind our fellow-subjects of the inestimable privileges which they possess; and the glorious expectations which they may justly entertain for themselves and their posterity, from your majesty and your family, if they will fecure the Divine Protection, by leading thankfully, quiet and peaceable lives in godliness and honesty, as their holy profession requires. And we most dutifully intreat the continuance of your majelly's attention to the facred interells of Christian piety and moral virtue, which we are fully fatished you have deeply at heart nov tobatt

His majefy's most gracious answer.

My lords, and the rest of the clergy,

I Accept with thanks these nece as
forances of your regard to the

queen; and fee with particular pleafure the expressions of your gratitude to Almighty God, for the birth of the prince; my son.

Your opinion of my fixed intention to educate him in every principle of religious and civil liberty, is truly acceptable to me.

Be affired, that no endeavour on my part shall be wanting to promote the sacred interests of Christian piety, and moral wirtue; and to transmit to posterity our present most happy constitution.

Summary of the papers relative to the rupture with Spain; published by authority.

THESE papers contain a feries of the most material transactions between the two courts, from the time that M. Bussy presented the memorial in the name of his Catholic majesty, to that when the E. of Bristol left the court of Madrid, and war was declared with Spain.

They begin with a letter of inftructions from Mr. Pitt to the E. of Brittol on that unlooked for event, in which the fecretary remarks, that the engagements between the crowns of France and Spain were, by the French minister, avowed to be previous to the overtures of peace by France, and confequently were from that time as difingenuously suppressed, as they were in the moment infolently produced : That the memorial relative to the disputes between England and Spain, was fo offenfive, that the king's fervants were unanimoully of opinion atterly to reject it; that nothing could equal the king's furprize and regret at a transaction lo unprecedented as that of an attempt to mingle the difputes of a neutral power with the negotiations now carrying on with France; and that, in case the Spanish minister shall evow, that this strange piece has really been authorized by the court of Madrid, then his excellency is epjoined to remonstrate with energy and firmuels against the unexampled irregularity of fuch a proceeding on she part of Spain, and to affore M. Wall, that as, on the one hand, his majesty will by no means add any new facilities from the confideration of an union of councils, or of prefent, or future conjunctions between ence and Spain; fo, neither on the other hand, will his majefly's equity and moderation ceale to difpose his royal mind to the same realonable terms of accommodation with Spain, as the king, excited by melination, and determined by fyitem, has, through the course the negotiation, invariably declared himself ready to embrace, - Then follows the answer to be given to three points in dispute: First; conmade against the flag of Spain, or in violation of the territory of that the courts here inflituted to take cognizance of all matters of fuch a ature, are always open to the arties who think hit to leek redrefs andue course of juffice; and it is superfluous to observe, that the minifters of his most Christian majesty ere not a tribunal to which Great Britain allows an appeal.

Next, as to the stale and inadmissible pretentions of the Biscayans and Galpuscoans to fish at Newfoundland, let W. Wall clearly understand, that this is a matter held facted and that no concession, on the part of his majesty, so defiructive to this true and capital terest of Great Britain, will be not o Spain, however abetted and ported: And it is still hoped, a prudence as well as justice will duce that court no longer to exact as the price of an union, which is at least as much her interest ours to maintain inviolate, a faction, which can never be granted.

In this dispatch, which bears date uly 28, 1761, was inclosed the nemorial already mentioned; Mr. int's letter to M. Busy, when he rearned it, with two supplemental menorials of a most extraordinary nature. Mr. Pitt expresses it, which the ublic has not yet seen; the receipt fall which the E. of Bristol acknowedges, and, in consequence of the

instructions contained therein, his excellency had no less than five conferences with the Spanish minister, in which he had nrged all that he had received in commission with great force of argument; the answers to which are as follows:

M. Wall owned, that he had been informed of all that had paffed at the court of London on the fabject of the memorial in question, and that in consequence of a pro-posal made by the court of Verfailles to the king his mafter, his majesty had consented to guarantee the intended peace between France and England; and, at the fame time, to accept of Frace's express offer of endeavouring to accomo-date the disputes subasting between England and Spain; but, in affenting to this, his excellency declared, that his Catholic majesty had no defign of offending the British court. and was not a little furprized that it could be productive of fuch an effect; that, as to England's declaration of adding no new facilities to Spain, in confideration of any intimation or threatnings whatever, the Catholic king could not but applaud those sentiments in his majesty, which he felt so trongly within himself; adding, that the court of London was certainly at liberty to reject any proposals coming from the French ministry, but that the king of Spain no doubt had an equalifight to communicate whatever measures he thought conducive to his interests, to the most Christian king, his majesty's friend, ally, and near relation matera elditim

M. Wall pursued his discourse, by acquainting the earl with France's having spontaneously offered, (in case the disputes of Great Britain and Spain should, at any time here-

is approaching,

after

after, occasion a rupture between the two courts) to unite her forces with those of Spain, to prevent the English encroachments in America: An offer which the Spanish monarch had received with great cordiality.

General Wall then asked, whe-ther it was possible to be imagined in England, that the Catholic king could feek to provoke the court of London at a time when the British nation was in the most flourishing and most exalted situation it had ever known? Affaring the earl, on the contrary, that the Catholic king, both before, and at prefent, esteemed, as well as valued, the frequent professions he had made of his majery's defire to adjust our mutual differences amicably; but, he perceived, the terms on which commodated, occasioned the difficulty. The Catholic king, he faid, did not think England would look upon the French ministers as a tribanal to which the court of London would make an appeal, nor meant it as fuch, when the first article of grievances was conveyed through that channel. As to the fecond, the claim of the Guipulcoans and Bifcayans to fish for baccalao i it was what Spain had always infifted

opon, and never receded from any treaty +: And laftly, conce ing England's evacuating all usurped lettlements on the logue coafts, it had never been offe but upon fuch conditions as a inconfistent with the dignity of Spanish crown to accept; fince in court of London would only fent, that, previous to her feed orders to those unjust settlen remove, the Catholic king floor be compelled to make known to be English, in what manner the le wood was to be affured to the kin fubjects, notwithstanding the S nish monarch had repeatedly gin his royal word, a method should found out for that purpole; a that, till it was adjusted, in which manner Great Britain should en that privilege, the English cun of logwood should continue, will out interruption, or molestati of any kind, to carry on the commerce upon the footing they present exercise it. His Cathol majesty only asking, that, for h own royal decorum, the usurp establishments should be relinquis ed by the English, to prove the good faith we piqued ourselves my on, and to convince Spain, we d not maintain these forcible posses

fons,

For the greater exactness in this bufinels, it was mutually agreed etween the earl of Bristol and M. Wall, to deliver each other in wri-

the governor of Sanroque had enquired into the behaviour of the inhabitants of Tariffa, and had given such effectual orders, respecting their illegal protection of the French row-boats, as would effectually prevent any farther remonstrances on that head; that the Spanish minister had complained of fome additional works carrying on at Gibraltar, and that he had asked, Whether Great Britain could feriously entertain any apprehensions of a rupture between the courts; adding, That the Catholic king bad at no time been more intent on cultivating a good correspondence with bis majesty than at present. This letter did not come to hand till October 5. the day on which Mr. Pitt refigned the feals.

In another letter, his excellency informs Mr. Pitt of the fafe arrival of the flota, in the bay of Cadiz, on board of which he fays there is little more than 330,000 l. upon the Catholic king's account, and this paltry sum, the produce of the royal revenue for two years, owing to want of management in the viceroys and governors, and to the knavery of the affesfors and collectors, who are the principal people concerned in defraucing the king of his dues.

Another letter from his excellency, dated Sept 28, exhibits a come plaint made by the Spanish coure against the English logwood cutters, who had begun to fortify themselves ing the heads of the principal ar- at Rio Tinto, on the river Wallis, guments made use of by both, in and about the Laguna Azul; and an the frequent conferences they had intimation from M. Wall, that if on this occasion. These papers are those settlers were ordered to with serted; and then follows another draw, no kind of molestation what etter from the E. of Briffol, dated ever flould be given to any of Segovia, Sept. 14, in which his the English logwood cutters, either excellency informs M. Pitt, That on the couft of Honduras, or the

bay of Campeachy, till a convention could be concluded, by which this long conteffed bufiness should be finally adjusted. M. Wall, the earl adds, was the more preffing on this occasion, in order to put a stop to the repeated intimations of the French emissaries, who were continually representing to the court of Spain the indignity of entering into any negotiations with a power, who avowedly withheld from his Catholic majefty feveral illegal fettlements in his territories. This the earl feems to wish was complied with, as he has no reason to suspect the fincerity of M. Wall, and as, at the fame time that it would filence the clamours of the French party, it would facilitate the court of Spain's coming to a speedy adjust-

ment with England. a In the next letter, dated Segovia, Oct, c, his excellency acknowledges the receipt of a dispatch notifying his majesty's marriage, &c. In this letter the earl writes, that M. Wall had expressed his concern that the hopes of peace were now more remote than ever, as Mr. Stanley and Ma Buffy were foon to return to their respective courts. He adds. that the prevailing opinion in Spain wasy that France had made as great concessions as could be expected ; shat if Great Britain was fo firenuous in favour of the K. of Pruffia, it was equally laudable in France not to defert the empres queen; and that to infift on forporting the former with our whole force, while the latter was only to be affifted with 22,000 men by France, was almost equivalent to the abandoning the house of Auin fome, degree adequate to the feiff

The next letter in this collection is that in which the Boof Egremont,

the new secretary, opens his respondence with the E. of Brid In this most fecret letter, which dated Oct. 28, his fordfhip expe fes his majefty's particular faun tion at that part of his excellent letter of the rath paft, wherein me tion is made, that the Catholic in bad at no time been more inten cultivating a good correspondence with his majesty than at present; and highly approves the affurances which his excellency had given M. Wall that no additional works had been begun at Gibraltar, as, upon es quiry, his lordship finds that no a ders had been iffued with regul to the fortifications of that place His lordship, at the same time, if fores his excellency, that the friends intimation of M. Wall, to evacuate the most recent fettlements on the coast of Honduras, was confident by his majefty as a happy prefage of a fpeedy and amicable contifion of all disputes subfishing between the two crowns, with this additional declaration, on the part of his majesty, that he continues to have nothing more at heart, than to colt vate the most cordial friendship with the Catholic king; trufting, how ever, to find this disposition reciprocal on the part of Spain; "thefe being the king's fentiments, fan his lordship, his majesty cannot imagine that the court of Spain should think it unreasonable to defire ! communication of the treaty acknowledged to have been lately concluded between the courts of Madrid and Verfailles, &c." add ing, as a reason, that the honour of his majesty's crown, and the interest of his people, equally all for an explanation on this head before he can, confistent with his dignity, proceed in any negotiation

with

To the fecret and precise instructions contained in this excellent letter, the whole of which we could have wished to have preserved in our collection, his lordship adds

this most interesting and spirited declaration: That, in order to prevent any perverse impressions, which Mr. Pitt's retiring from public bufiness, at this juncture, might occafion, it is proper that I should affure your excellency, that the meafures of government will fuffer no relaxation on that account; on the contrary, I may venture to promile, that the idea suggested by fome malevolent persons at home, and perhaps industriously propagated abroad, of the whole fpirit of the war subsiding with him, inflead of discouraging, will only tend to animate the present ministry to a more vigorous exertion of their powers, to avoid every possible imputation of indecision or indolence. which ignorant prejudice might fuggest: and the example of the spirit of the late measures, will be a four to his majefty's fervants to perfevere, and to firetch every nerve of this country, towards forcing the enemy to come into a fafe, honourable, and, above all, a lasting peace. I further have the pleasure to inform your excellency, that the most perfect harmony, mutual confidence and unanimity, now reign in his majesty's councils; with a thorough determination to push the war with fuch vigour, as will, it is hoped, under the hand of Providence, procure ftill farther successes to the just cause for which this country drew the fword. The king, at the fame time, continues to be disposed, with equal moderation to put an end to the dreadful calamities of warthe moment the enemy will liften to fuch terms of peace as shall be confiltent with his majefty's honour in fome degree adequate to the fuecesses of his arms, and calculated, by promiting permanency, to pieierve

ferve mankind from the various difireffes and miferies, which have been so fatally experienced during the course of this cruel and bloody war.

To this dispatch was added two letters from his lordthip to his excellency, both of the same date with the dispatch; the first, fecret and confidential, informing the earl for his private direction, that, in case he should find insuperable objections to the defired communication, but in lieu thereof the most folemn affurances upon the royal word fignified in writing, of the innocence of the treaty in question with refpect to the king's interests, his excellency was not totally to reject the alternative, but to take it ad referendum, to be transmitted to the British court. The second letter, feparate and fecret, enjoined his excellency to penetrate, as far as he could, his Catholic majefty's real views, the prevailing temper and fentiments of his principal mi-nifters, the order and regulation of the fea and land forces, the flate of public credit and the finances, and the disposition of the court to depart in any manner from the neutrality, by openly or fecretly affifting the king's enemies; but, in doing this, to avoid the least mark of offenfive diffidence.

In a letter from his excellency to Mr. Pitt, dated Oct. 12, he just mentions his having received a letter from gen. Parson at Gibraltar, concerning the works carrying on there, which consisted only in some necessary repairs and conveniencies for the garrison, which he had reported to M. Wall, requesting him to acquaint his Catholic melety with that very authentic contradiction of what had been maliciously conveyed to this court.

The next paper, in this colle tion, is a letter from his excelled to the E. of Egremont, dated No 2; in which he informs his lord of the haughty language now by the court of Spain, fo differen from all the former professions declarations of the Spanish secretar of state, that his excellency con not help expressing his uneafines by defiring to know whether there were any grounds for the rumour's generally propagated of an a proaching rupture between Greet Britain and Spain, grounded upon a treaty faid to be lately conclud between the courts of Madrid and Verfailles; and, if it were possible, after all that had passed, that such a treaty could be concluded, the he defired to be told of what nature it was, whether offenfive, or fingly defensive; what were its views, as what its conditions? But, infeat of answering directly to these quel tions, fays his excellency, gen. Wall began, by declaiming against the conduct of England, as unwarrantable, as his Catholic majesty never could obtain an answer from the British ministry to any paper sent thither, either by his own ambasisdor, or his Britannic majefty's; alledging, that we were intoxicated with our fuccesses, and aimed at ruining the French power, in order more easily to crush that of Spain; and having worked up his anger to a degree his excellency had never feen before, he added, that fince his Catholic majesty's dominions were to be overwhelmed, he would himself be the first man to advice his mafter, at least to have them feized with arms in his subjects hands, and not to continue the palfive victim he had hitherto been supposed to be in the eyes of the

When the general's warmth idly renewed his former questions, t, inflead of giving any fatisfacry answer, he fell again into an common warmth, infifting that had fet the Spanish power at ance; that we had attacked and undered their veffels, infulted their pasts, violated our neutrality, enpached upon the territorial jurifiction of the king's dominions in merica, by illegally feizing logrood, erecting fresh fettlements in he bay of Honduras, and had witheld from his subjects the right which they had long enjoyed of thing upon the banks of Newoundland for bacallao. He added, hat he had, indeed, given his royal nafter hopes that justice would be granted to attone for these repeated grievances, and therefore wanted to know where, when, and how, it was to be expected? His excellency, otwithstanding this second digresfion, did not depart from his former questions, and at length received for answer, that he [M.Wall] had no orders to acquaint him with any measures but what he had formerly communicated.

Finding no ground to be gained by farther enquiries at this time, his excellency took his leave, and, after paying his court as usual to his Catholic majesty, he returned in about an hour, and, under pretence of thewing an attention to gen. Wall, which he always paid before he fent off a messenger to England, to know if he had any commands thither; he took occasion to renew the former topic of conversation, which was only productive of a repetition of former grievances, with this ad-ditional intimation, That the court of France was determined to pub-VOL. V.

lish to the world the mortifying terms she had consented to for the take of peace, and to expose the arbitrary and unreasonable demands of Great Britain, whose unbounded ambition had frustrated his most Christian majesty's good intentions, in yielding so much from motives of humanity.

His excellency thought he had liftened sufficiently to all these accufations; and therefore, having recollected himself by a short abfence, he begun by answering the charge to all that complicated beap of grievances which the Spanish minister seemed purposely to have thrown out to divert his excellency from persevering in the pursuit of getting his curiofity gratified; and, after having exposed the weakness of all those specious arguments which the general had made use of, he concluded his discourse with repeating his inflances for information concerning the treaty; but the most he could obtain, was, That his Catholic majesty had judged it expedient to renew his family compact with the most Christian king.

His excellency concludes this difpatch with affigning what he thinks the cause of this very different language from the Spanish court, the Safe arrival of all the wealth that was expected from Spanish America; the progress of the French army in the king's electoral dominions; and the fuccess that has attended the Austrian operations in Silefia; adding, That he had long observed the jealouly of Spain at the British conquelts, and was convinced that the consciousness of their naval inferiority, was the only motive that inand friendfhip with Great Britain, (O)

To this dispatch, which was received November the 14th, the E. of Egremont returned an answer on the eath, in which he expresses his majefty's aftonifament at the abrupt and unprovoked transition of the Spanish secretary of state from the most cordial and contiliatory tone of friendly profession, and amicable adjustment, to the most peremptory and haughty tyle of menace and hostility, and the rather as the count de Fuentes had the very day before his excellency's dispatches arrived, repeated the firongest affurances of the friendly dispositions of the king his mafter, and of his fleady purpole to maintain the strictest amity with the cours of Great Britain. It were continues his lordship, both tedious and useless to enter minutely into the enswers so obvious to be given to the offenfive digressions by which M. Wall determinately evaded giving any fatisfaction to your excellency's most seasonable demand with regard to the treaty lately concluded with Brance; a few observations will therefore fuffice on the order of woor diffratched

As the affertion. That his Catholie majety never could obtain an
answer from the Britth ministry to
any memorial, or paper, &c. a proposition so notoriously groundless,
considering the emple materials in
your excellency's hands, scarce deferves a serious answer; and as to
the language held relative to the
negotiation with France, and our
unbounded ambition and thirst of
abnounded ambition and thirst of

which the Spanish minister talked of proposing to the king his master,

gives his majesty the greater excern, as M. Wall cannot but knowith what particular delicacy as plans of military operations has been concerted, in order to and all hostilities towards objects the might give the least jealously or as brage to the court of Spain; is unjust suggestions must therefore a looked upon as a mere pretext, the in case the court of Spain should have meditated hostilities again England, the court of London might appear as the source of a the missortunes that may ensue from

Another letter that accompanied hele, Separate and Secret, directed is excellency, if little or no hopes of succeeding remained, to take the most ecret and expeditious manner of iving immediate notice to major reneral Parflow at Gibraltar, and o all his majeffy's confuls in Spain nd Portugal, of the critical fituaion of our affairs with Spain, and kewife to make the fame commuication to Sir Charles Saunders; ind if all bopes were at an end, and is excellency's departure from Mahid was inevitable, then to fend of a letter to admiral Saunders, and nother to commodore Keppel, acnaming them with this final refolation; and left his excellency should have reason to apprehend that the messengers with these letters should e intercepted in the dominions of Spain, he is himself directed so fet ut immediately for the frontiers of ortugal, and from thence to difpatch duplicates of his letters, &cc. leaving a person at Madrid to take care of his private affairs in act to

The next letter in this collection, is dated Efcurial, Nov. 9, in which the earl of Briftol gives an account of the military preparations on the part of Spain; professionlarly, that two men of wat were selected from Ca-

diz, the one to convoy the affogues, and the other to protect some Dutch transports with ammunition and flores for Carthagena and America. Eleven ships of the line, he adds. lie at Ferrol, rigged, manned, and ready to put to fea, with two frigates, one of which is bound to the South Seas, with ball, powder, and implements of war; that two ships of war, with two large barks under convoy, having 3500 barrels of gun-powder, 1500 bomb shells, 500 chefts of arms, and a confiderable quantity of other warlike stores. were failed from Barcelona to the West Indies; and that five battalions of different regiments, making in all about 3600 men, were waiting at Cadiz for final orders to embark for America

By another letter, dated Madrid. Nov. 16, his excellency acknowledges the receipt of the fecretary's dispatches of the 28th of October; and adds, that the military preparations of Spain are far from flackening; that 1500 men had entered the town of Ferrot, with a defign foon to embark for the West Indies; that a regiment of foot was gone to Majorca, and another had orders to hold itself in readiness to be fent to the same island; and that in the West Indies they had to ships of war, and not fewer than 16 frigates, to attend themed Sysnells

His excellency's letter, dated Efcurial, Dec. 14, is more important. he having entered minutely into every argument foggetted by the Brifish fecretary 1029 and though. fays his excellency, I dare not flatter myfelf with having gained any ground upon the Spanish minister, ver I never before observed M. Wall liften with greater attention to my discourse. When he answered me.

[0] 2

it was without warmth; when he applied to me it was friendly; and after long reasonings on both fides, we parted with reciprocal proteslations to each other of our earnest desire to continue in peace." On this favourable opportunity, his excellency urged the inseparable connection of interest that unites the two crowns, and which could not fail of soon producing a good effect, notwithstanding the mean artisces of France to sow diffentions with a view to drain the royal coffers, without any real regard to the retentions

of Spain.

The next paper in this collection is, the translation of a paper delivered by the count de Fuentes to the earl of Egremont, being an anfwer to a memorial delivered by the earl of Briftol to the court of Spain. This is followed by a letter from dord Egremont to his excellency, dated Dec. 22, disclaiming any knowledge of a feizure, which it was reported in the city, that admiral Holmes had made of some Spanish barks laden with sugar at . Monte Christi, expressing his majesty's concern upon hearing it, and adding affurances, that if the fact proved true, not a moment should be loft in taking fuch steps as should facisfy his Catholic majelty, with regard to the unjustifiable and unauthorized conduct of any of his majefty's fervants upon this occasion, in order to prevent any malicious use which might be made of this unfucky event.

The next letter that follows, is dated Madrid, Dec. 11, 1761, which gives the first account of the earl's final resolution of leaving the court of Spain, and setting forth the difficulties attending the execution of his majelly's orders in send-

ing the letters to the proper office by land and fea for the better in rity of his majefty's subjects. H adds, that he was denied po horses; that he was furround with spies; that the roads were ! most impassable between Spain a Portugal; that he was himfelf ill as to be unable to travel; he that he had tried a method whin he does not chuse to mention, convey the necessary intelligence admiral Saunders, general Parlow, and the confuls; and that M. Po. ter, feeing how ill his excellent was, had promifed to fet out for Lifbon, by whom the letters he ha then ready should be forwarded.

Having thus given at large to instructions which the earl of Brish received from time to time from the court of Great Britain, relative to his conduct with the Spanish ministry; it remains only to shew a what manner his excellency excuted his commission; and the treatment he met with on this memory.

able occasion.

What passed at the first conference with the Spanish minister, at ter his excellency had received in orders to infift on a categorical anfiver, or to retire from the Spanill court, is contained in a letter w lord Egremont, dated Madrid, Dec 7, 1761, the substance of which it as follows: The messenger Potter, having arrived at Madrid on the 5th at night, his excellency the call of Bristol acquainted M. Wall, the next morning, that he had received dispatches from England of the lat importance, and M. Wall being confined to his room by an accident that had happened to his foot, appointed one o'clock for a conterence in his own apartment. At this conference the earl began by

rectitude and humanity of his royal mind.

It was impossible to listen with more obliging attention than M. Wall did to all his excellency said; when his excellency appealed to him on any point, he answered friendly; when he reasoned, he reasoned candidly and minutely; and acknowledged the caution that had been observed in attacking those possessions belonging to our enemies that had any connection with the Spanish territory; but concluded, that the copy he delivered to his excellency of his dispatch to the count of Fuentes, sat the British court was the only answer he could give about the treaty in question.

His lordship observes, that at this visit he had only dwelt in general terms on the intentions of Spain towards England; and his motives for acting in this manner were, that he perceived M. Wall's tone to be of a contiliating nature; that he flatmight obtain the categorical answer he was ordered to demand; that he had observed for some time before, the stile of the Spanish ministry to be gradually foftening; and that all that fudden wrath and passion which he had discovered, had arisen on the notice of the change which had happened in the English administration, having been occasioned by the measures proposed to be taken against the Spanish court.

His excellency proceeds, in his letter of the 9th, to give an account of his fecond conference with the Spanish minister, on the same subject. At this conference, which, was on the 8th of December, the Spanish minister said, he had re-

This dispatch was by way of memorial. (See page [199] [200]).0 1023

Ceived his Catholic majefly's commands, to inform him, that, with regard to the treaty, and the intento the count of Fuentes, was the only answer the Catholic king judged it expedient to give. Bat, at last, having declared frankly that the British court expected to have a categorical answer to the following questions, Whether the Catholic king intended to join the French, our enemies, or purposed acting hostilely? or would, in any manner, depart from his neutrality? adding, that Spain's refusal of this fattsfaction, would be deemed an aggression, and a declaration of war; the surprize of M. Wall is not to be expressed. He only brought out these words, " What is to follow? you have then orders to withdraw from hence?" Berng answered in the affirmative, he faid, the categorical answer required was such an attack upon the Catholic king's dignity, that it was impossible for him to give advice to his fovereign upon fo delicate a fubject; but being pressed, for the fake of humanity, as the ruin of thoulands of thoufands, and the diffress of nations were now depending, not to let any rash or precipitate measure be taken, M. Wall defired, for greater precifion, that what the British minister was ordered to demand, might be put into writing; his excellency therefore wrote down the following short fentences; "Whether the court of Madrid intends to join the French, our enemies, to act hollilely against Great Britain, or to depart, in any manner, from its neutrality? A categorical answer is expected to these questions; otherwise a refusal to comply will be looked upon as an aggression on the part of Spain,

and a declaration of war." It m not till the 10th of December the his excellency received the Spania minister's letter, in which it wa faid, That the Spirit of haughting and of discord, which distated the inconsiderate step, and which, for the misfortune of mankind, fill reigns h much in the British government, i what made, in the Same instant, to declaration of war, and attacked the king's dignity. Your excellency my think of retiring when, and in the manner most convenient to you; which is the only answer that, without & taining you, bis majesty bas ordered me to give you. With this letter ! friendly note of a private nature wa enclosed, in which M. Wall hope for the honour of feeing his excellency, and of confirming to him by word of mouth, the esteem and respect with which he was his lord ship's obedient servant; but, not withstanding, when his lordship, a his departure, applied for polhorses to facilitate his journey out of Spain, an order for that purpole was refused, spies were every when planted about his house, and, in thort, he found himself so closely guarded, that though he was ill of a fever, he thought it best to nique all, even at the hazard of his life in order to quit the dominions of that unfriendly monarch. Such wa the treatment which the British ar nifter received at the court of M drid, when it was no longer in the power of that court to treat and the malk of deceit and treacher The breach with England had a doubt, been long determined; the time was not yet come when declaration was to be made. U der the character of friends, by upon every occasion of dispute, cided in favour of our enemies; in

The manifesto so often alluded o, which was dispatched by the Spanish ministry to the count de fuentes, and by him delivered to he court of London, with the paper delivered by the earl of Bristol o M. Wall, November 18, which occasioned it, both follow at large, that the reader may judge on which fide that spirit of haughtiness is most manifest, with which the Spanish ministry have charged the British councils.

Translation of a paper delivered by the 'earl of Briffol, November 18, 1761. respect with which h

THE king has learnt, with particular fatisfaction, the justice of his Catholic majesty, in giving orders for the restitution of the ship the Speedwell; and his majefly is equally fensible of the moderation with which the privateer the King George has been treated; the count de Fuentes having given a memorial, complaining of the behaviour of the faid privateer, the most exact enquiries are to be immediately begun; and, as foon as the facts are proved, a fuitable fatisfaction, agreeable to our laws, will be given to the court of Spain.

Having communicated to the fecretary of state, in a dispatch of the month of September last (agreeable to the affurance I had then received) his Catholic majesty's, intentions to cultivate a good correspondence with the kings it baye, been exprefly ordered to testify the real

pleasure which such a declaration, of the fentiments of this court, has occasioned: and I must not omit to affure, that no order has been feat for augmenting the fortifications of Gibraltar, confequently they have only been working there on

the usual repairs.

His majesty having nothing more at heart, than to maintain and firengthen the most cordial, and the most fincere friendship with the Catholic king, does not doubt of meeting with the same dispositions as his, on the part of Spain: for there is nothing more evident, than the mutual advantage which must, at all times, result to the two kingdoms by fuch a reciprocity.

After this declaration, it is not furprizing, that the court of London defires and demands of the Spanish ministers, a communication of the treaty lately concluded between their Catholic and most Christian majefties; or that they would impart the articles which may be thought relative now, or in future, directly, or less immediately, to the interests of Great Britain. instances do not proceed from any disadvantageous suspicion of the affurances of friendship, so often repeated by Spain to the court of London; they only tend to obtain fome explanation, with regard to the language which the king's enemies have affected to hold; namely, that Spain was on the point of taking part in the present war, by joining France against England. Such are the reports which have made lo rapid a progress in all Europe; and the king's honour is concerned in putting a stop to them, as far as the interests of his people require their being contradicted; without which, how can his majesty persuade him-

felf to enter into a negotiation with Spain, for accommodating the differences which have unhappily subfifted, for fo long a time; between the two courts? The Catholic king is informed of all the alliances and engagements of Great Britain; and it would be an unfriendly referve, at this juncture, not to comply with giving his majesty this fatisfaction on the contents of a treaty, fo recently figued with a power actually at war with the king; and especially, when France does not cease to give out, that the conditions of this new engagement tend towards ho-Milities which Spain will, very foon, manifest against the British nation.

This obstacle once removed, his majesty is determined, without lofs of time, to enter into an amicable difcussion of the matters, which make the subject of the disputes of the two crowns; not at all doubting, but that they may be eafily adjusted; and being convinced, that a reciprocal and extensive confidence will not fail to fuggest expedients, for faving the dignity, and the honour, of the two kings, and for adjusting, to the reciprocal fatisfaction of their majefties, every thing that has, vill now, retarded that folid and permanent harmony, which has always been the object. the wifher, the follicitude, and the defires, of those who wish the effential advantages, and the true glory, of the two monarchson

In order to prevent every perverse impression, which the change that has just happened in the English ministry might occasion, it is necesfary to declare, that the most perfect unanimity now reigns in the king's councile; and that it is refolved there, to continue the war with all possible vigour; his majesty, however, only wishing for the ment to put an end to the terms misfortunes, which are the inent able confequences of it, as foon he thall find his enemies disposed make peace, on conditions which may correspond to the successes with which Providence has been pleased to bles the king's arms, and which shall, at the same time, give a pearances of a folid and durable peace, after all the miseries which have been suffered during the cours of these last years.

Translation of a paper received by the lord Egremont from the count a Fuentes, December 3, 1761; a answer to the foregoing.

Most excellent Sir,

MY lord Briftol delivered to ma fome few days ago, the me morial, whereof I fend you a copy. In the first paragraph is seen the fitisfaction of his court at the king! justice, in caofing the English ship the Speedwell to be restored; and at the moderation with which the offence of the King George privateer had been chastised, to which there is nothing to reply, only, that his majesty is glad that the minity acknowledge the uprightness and moderation of his proceedings.

In the fecond paragraph, my lord Briftol fets forth, that having wrote in September to his court the intention he had been affored by us, in which the king was, of cultivating a good correspondent with the king of Great Britain, had been ordered to declare the rel pleafure fuch a declaration, from us, had given Indo not rammit baving made is then in a more part. cular manner than at many other

mes; nor do I comprehend the motive is their making fuch a point of it; owever, it is certain, that in the arious occasions that have presentd themselves, in the life-time of ing Ferdinand (who is in heaven) well as of the king our lord whom God fave) the Spanish miifters have repeated the wishes of heir court, to cultivate the best orrespondence with that of Lon-My lord adds, in the same paragraph, that he can afcertain, hat no order has been transmitted for increasing the fortifications of Gibraltar; which does not furprize he king, as he has given no room for the least mistrust; nor would the contrary furprize him, the English being as much the masters to increase them, as his majesty is any

one place of his own. My lord Briftol continues, in another paragraph, to express, that there is nothing the king, his mafter, has fo much at heart, as to form a closer and more fincere friendship with the king, our lord; and that he does not doubt finding the fame dispositions on the part of Spain; the mutual advantages that will actrue to both nations therefrom, being evident: And all this is in order to come, by degrees, to what, after fuch a declaration, was not to furprize us; that his court should defire and afk of the Spanish miniflers, the communication of the treaty lately concluded between their Catholic and most Christian majesties, or the articles that relate to England. Your excellency knows how easy it would be for the king to give a direct answer; but his own decorum prevents him, from the confideration, that this demand is made as a compuliive condition for commencing a negotiation with Spain, about differences which are confessed to have subsisted so long. Whoever heard speak of commencing a negotiation, would think that, hitherto, nothing had been negotiated about our differences; and besides, would believe, that their confidering them as worthy of necotiating, was doing us a favour. It is a very fingular method in that ministry of misunderstanding so many offices, memorials, and conferences, which have passed for these fix years thereupon, and particularly fince the king fent your excellency to that court, proving the incontestible grounds of our complaints and just cares, and repeating, that, without fatisfying them, it is impossible to fix the good correspondence of the two monarchies, nor the friendship of the two monarchs, fo deferving of each other's love. If all that has been declared by word of mouth, or in writing, the answers and replies that have intervened, the points that have been concluded upon, is not a negotiation, I do not know what is called fuch.

My lord Briftol offers, that, when the king our lord should declare himself upon the existence or nonexistence of the sopposed treaty, or upon the articles relating to the English, the king, his master, has determined to enter, without loss of time, into a friendly discussion of the points which occasion our differences; not doubting but that they may be accommodated, and expedients found out, for faving the digbity and honour of the two fove In this court they must confider only, as a mere trifle, what they feek after p fince, in recompence, they only promife what we are already tired of practifing.

What greater discussion upon the points of our disputes can be made, than that which has been in fo long a negotiation? What expedients can be fallen spon now to fave the honour of the two kings, which, in arguments and disputes of fix years, have not occurred? And if in London they are to be found, Spain is the creditor for her patience in the pursuit of ber complaints, and for having feen the various successes of the war the English were carrying on, whilst she only proposed, without offering to impose, conditions upon that account. The most noble expedient, and which does the greatest honour to kings, as well as to those who are not fo, is, not to with-hold the property of another unlawfully, but to restore and even punish the usurpers, without minding (if it falls out fo) from whom the injured person asks it. panili

My lord Briftol concludes with a paragraph entirely foreign to our bufiness, declaring, that a perfect unanimity subfifts in the councils of Great Britain; and, that the king was resolved to continue the war with all possible vigour, till he had reduced his enemies to a peace adequate to the fuccesses of the English arms, and which might have the appearance of being a firm and lafting one. It is not directly our intention to answer thereto; but the two points which the English defire by the peace, are contradicted evidently by what all the world has just feen. All impartial persons can decide, whether the terms offered by the French, and refused by the English, do not bespeak the advantages of the English arms; and their inadmission will be attributed by them to other views, which ought not to be indifferent to the other maritime powers, and proprietors of a minions beyond fea. And it a occasion surprize to them, that it the court of London desires a pea that wears the appearance of bes firm and lasting, it should pique if self upon that of Paris's infinuating how necessary it would be to adjutant the same time, our difference to cut off all risk of its renewing to war in favour of us.

My lord Briftol then, by men of another memorial, asked, i France had taken that ftep with the king's confent, in the same maner he now asks us, whether there is fuch a treaty, or not, with France! We answer frankly, yes; proving the regularity of it : And with the motive we reply to the repeated of pressions of the court, about de firing a good correspondence with ours, esteeming them at all time, however, thinking it was necessary, effects should have accompanied them; and as if fuch a memoral had never been given by us, forgetting it entirely, they present w another, with a new question, with the fame general expressions, and the unexpected novelty of offering to commence a negotiation fo long discussed, and so well digested, that it has been reduced, during your excellency's ambaffy, to the last year or last no.

Your excellency, being thoroughly informed of every thing I have fet forth, may tell it, or give it in writing, if it is necessary, to that ministry, in order that, upon no account, it may charge us with leaving my lord Bristol's memorial unanswered, and that it may acknowledge the impropriety there is, the the king should satisfy their curing at every turn, whilst no satisfastic is given to his just demands.

We cannot help contrasting the parts of two letters, both written by the me minister, within little more than a month of each other; the one of the Escurial, dated November 2, the other from Madrid, dated lecember 7.

Escurial, Nov. 2, 1761. WO ships have lately arrived at Cadiz with very extraordiary rich cargoes from the West ndies, fo that all the wealth that ras expected from Spanish America, now fafe in Old Spain. Perhaps HIS CIRCUMSTANCE has raised the anguage of the Catholic king's ministry, added to the progress which be French army is making in the ing's electoral dominions, and the success that has attended the Austrian perations in Silefia. I have long observed the jealousy of Spain at he British conquests, and am now CONVINCED that the confciousness. of this country's naval inferiority has occasioned the soothing declarations so repeatedly made of a defire to maintain harmony and friendship with England.

mil avail of Madrid, Dec. 7, 1761. OUR lordship will, no doubt, have remarked, that, from the time of Potter's departure with my dispatches of the 2d past, the stile of the Spanish minister has been foftening gradually; what had occasioned the great fermentation during that period at this court, the effects of which I felt from general Wall's animated discourse at the Escurial, was, the notice baving about that time, reached the Catholic king, that the change which had happened in the English administration, was relative to measures proposed to be taken against this country. HENCE arose that sudden wrath, and passion which, for a fort time, affected the whole Spanish court, as it was thought mast extraordinary bere that the declaring war against the Cathelic king should EVER have been moved in his majesty's councils, fince the Spaniards have always looked upon themselves as the aggrieved party; and of courfe, never could imagine that the English would be the first to begin a war and of oreno

DON Joseph Torrero, ambassador extraordinary of the Catholic king, and Don James O'Dun, minister plenipotentiary of the most Christian king, at this court, by the express and positive orders of their masters, declare, with the greatest respect, to the most faithful king; That the two sovereigns of

arms, and which might have

That the two fovereigns of France and Spain, being obliged to fupport a war against the English, have found it proper and necessary, to establish several mutual and reciprocal obligations between them; and to take other indispensible measures to curb the pride of the British nation, which by an ambitious project to become despotic over

the fea, and confequently over all maritime commerce, pretends to keep dependent the possessions of other powers in the new world, in order to introduce themselves there, either by an underhand usurpation,

or by conquest.

That the first measure, which the kings of France and Spain agreed on, was to have the most faithful king in their offenfive and defenfive alliance, and to defire him to join' their majesties forthwith : That they expected, that the most faithful king would acquiesce therein, conformably to what he owes to bimfelf, and to his kingdom, fince his subjects feel, much more than other nations, the yoke which Great Britain lays, and which the means to extend over all those, who have poffessions beyond sea; and that it would be unjust for France and Spain to facrifice themselves for an object, in which Portugal is fo much interested; and that, instead of affifting them, they should make it impossible for them to succeed, by allowing the English to enrich themselves by their commerce, and to enter their ports, not only to make use of them as an asylum, but to be more at hand to hurt the defenders of the cause of Portugal.

That, in this spirit, the ambassador of Spain, and the minister plet the wars, which king Philip the nipotentiary of France, defire the most faithful king to declare himfelf united with their Catholic and liged to support against England: most Christian majesties in the pre- How much more glorious and more fent war against the English, to vieful will it be for the most faithful break of all correspondence and king to have, for his ally, a Catholic commerce with that power, as the king, his near relation, his neighcommon enemy of all the three, bour in Europe and America, to and even of all maritime nations; affift each other murbally and with to fend away from his ports, and to ease, than the English hation, in hut them against, all their men of capable, by their haughtines, u

join to the forces of France al Spain, those which the Most His has put in his hands, in order w make them equal to those of the enemy. Med W

This declaration made by the two monarchs of France and Spain. as being agreed and concerted between them; his Catholic majeffy has, in the mean time, instructed his ambassador to make this reflection to the most faithful king (a order that his magnanimous breat may the more easily and the more speedily determine, without being stopped by other impressions, to take the part the most conforant to his advantage, and to his glory that it is the brother of the queen his wife, a true friend, and a moderate and quiet neighbour, who has made this propofal to him, and who has agreed to it, confidering the interests of the most faithful king, as his own, and wishing to unite the one with the other, fo as that, either in peace or in war, Spain and Portugal may be confidered as belonging to one master; and in order that, if any power shall think of making war with Spain, they may not imagine they shall find, in her own house, shelter and fuccours to attack her, as happened, with regard to Portugal, in fifth, his father, and father-in-law of the most faithful king, was obwar and merchant ships; and to considering other sovereigns with

These considerations are so strong, hat the Catholic king thinks, there an be no doubt, but that the most hithful king, his brother-in-law, vill yield to them, without floping a moment; so much the more, s his Catholic majesty, before makng this invitation, and in order to revent the danger which the mariime places of Portugal might run, when the part taken by his most aithful majesty should come to the knowledge of the English, his Caholic majesty has caused his troops o march to the frontiers of Portual, fo that, in a very few days, hey may garrison the principal ports of the kingdom, and they will do t, after the answer of the most aithful king, which, doubtless, will e as speedy, as clear, and as detifive, as the necessity, and the offitive determination of his Cathoic majesty to prevent the designs of his enemies, require. Lisbon, the 16th of March, 1762.

(Signed)

Suck . DON JOSEPH TORRERO.

B Tronger fremout Ca JAQUES BERNARD O'DUN.

The two ministers added to this memorial, That they were ordered by their courts to demand a categorical answer in four days, and that every delay beyond that term would e confidered as a negative. aid in

Translation of the answer of the fecretary of state, of his most faithful majesty, to the foregoing memorial of the Spanish ambassador, and the minister plenipotentiary of France.

DON Lewis da Cunha, fecretary of thate to the most faithful king, having laid before his majefly, the memorial which his excellency M. Torrero, the Catholic king's ambassador, and M. O'Dun, minister plenipotentiary from the most Christian king, at this court, delivered to him the 16th of this month, wherein, after having declared the reasons of the present war, broken out between the faid two monarchs, and England, his most faithful majesty is invited to unite himself, by an offensive and defensive league, to the two courts of Verfailles and of Madrid, against England; to break off all communication and commerce with the English; to treat them as common enemies, not only of the three allied powers, but of all the maritime ones, to drive them from his ports, to flut them against all ships of war and merchant ships, and to join the Portuguese forces to those of France, and of Spain, to obtain, by this means, the object of the faid war; the ambassador of the Catholic king finally declaring, That that monarch, before he caused the above-mentioned memorial to be presented to the king, had ordered his troops, to march to the frontiers of Portugal, to prevent the designs of the English, who might have furprized the maritime places of this kingdom, when the offenfive union of his-most faithful majesty, with their Catholic and flom strongen with antique to fler ag subtratoreright with

moft Chriftian majefties, hould come to their knowledges days and

The king having taken the contents of the aforefald memorial into ferious confideration, in the precise term of four days, has ordered his fecretary of state to answer;

That his most faithful majesty is fenfibly affected, at feeing the flames of war kindled between the powers with whom he is elefely connected by the of blood, and of friendthip, and by folemn treaty, fuch as Spain, France, and Great Britain ! That his most faithful majesty wishes that ofe fame tier, and the neutrality he observes, may enable him to propose by his mediation, a renewal f the conferences broken off at Bordony fome time fince, and to fee, if, by this means, it may be possible to reconcile interests and willds posfouthat, without further offetion of heman blood, an advantageous, inecessary, and uleful peace may be obtained no robsitor

That his molt fachful majelty, disposed as much as possible to comply with the propolal made on the part of the Catholic and most Christian kings, defires them nevertheleft to reflect on the infurmountable obfiscles, which hinder him from entering into the offenflve lesgos proposed to him. That the court of Portugal having ancient and uninterrupted alliances with the British courts for many years past, by folemmand sublic treaties, pure ly defentivey and, as fuch, innocent; and not having received any immediate offence on the part of Great Britain to break the fame treaties, his most faithfuls majesty could not enter into an offentive league against that court, without being wanting to the public faith, religion, fidelity, and decorum, which are the invariable

principles of his majefty's mind, a of all religious and magnaning princes, fuch as the Catholic a most Christian kings."

Palace, 20 March, 1762.

Translation of a second memorial of the ambassador of Spain, and of the minister plenipotentiary of France, delivered to M. da Gunha the 1st of April 1762.

DON Joseph Torrero, ambassador of the Catholic king, and Don James O'Dun, minister plenipotentiary of the most Christian king; the first in virtue of new orders which he has received from his Catholic majetty, after he had feen the answer given by his excellency Don Lewis da Cunha, secretary of flate to the most faithful king, dated the 20th of March last, to the memorial which the two ministers delivered to him; and the second, in confequence of the fystem which the king his master, and the Catholic king, his coulin, have embraced. to keep themselves so united, that the interest of the one may be the interest of the other; the faid ambaffador and minister plenipotentiary with the profound respect due to the monarch of Portugal, defirous to fatisfy the regions fet forth, by his royal order in the faid anfwer of his excellency Monf. da Cunha, of the 20th of March last : and at the fame time, infifting on those which they produced in their memorial of 16th of the faid month. they humbly declare to his most faithful majety is belgaries

That their Catholic and most Christian majesties are thoroughly perfunded, that the misfortunes of war, which they suffer, are not indifferent to his most faithful majesty, and that he would have wished to contribute to the happiness of peace; but unfortunately it is not in his power to do it, except by force, (and that is what they invite him to) in order to reduce the enemy

not to despile proposals of accommodation, as they have hitherto done.

That, if there should be a new negotiation for peace, their Catholic and most Christian majesties would accept the mediation of his most faithful majesty, out of regard to his facred person; but the par-tiality which his ministry has shewn for the English, desiring to defend their neutrality in the course of the present war, would make his most Christian majesty fear with reason, that the mediation of his most faithful majety would not be favourable to him; and the Catholic king would act contrary to his own decorum, if he thould, on his fide, admit it, when he calls to mind the conduct of the court of Lifbon, on the king's offers to accommodate the differences with the court of Rome, without having been able to obtain from Portugal any mark of confidence, or defire of reconciliation with the boly fee, (an incredible thing) except the fingle an-fwer, That bisherto God had not granted the favourable moment for reconciliation.

That their Catholic and most Christian majesties, thoroughly believe his most faithful majesty's aversion to war, and his constant dispositions for peace; their enemies also know them, so as to make

advantage of them.

That the defensive alliances with the court of London, which his most faithful majesty fets forth to flew the imposibility of his accept-ing the offensive and defensive league propoled to him, cannot be any obstacle to him; that the reafons, given on this subject, are not founded, and that those same alliances are nor fo innocent, as they would have them thought.

They are not an obstacle; cause there is no alliance which obligatory; when the question is hake off a yoke, which one me would lay on another; and the the project, already far advise of England on Portugal.

107,

They are not founded; became notwithstanding it is affured, a the crown of Portugal has not no ceived any offence from England to induce her to a breach of tre ties, the contrary is clearly mis fested; for what stronger offen than that of attacking a Fred fquadron in one of the ports of Pa tugal? This fingle infult is his cient to give his most faithful m jesty a right to declare war agin his Britannic majesty, if he is not given a suitable satisfaction in it; and if he has done it, withou at the same, obtaining restitution his most Christian majesty's ship the most Christian king has a ng to declare war against his faith majesty.

These alliances are not so inn cent, though they are called pur defensive ; because they become reality offensive, from the fituate of the Portuguese dominions, from the nature of the Engli power: the English squadrous not keep the fea in all feafont, craize on the principal coafts cutting off the French and Spa navigation, without the ports, the affiftence of Portugal: islanders would not infult all mi time Europe; they would let thers enjoy their policilions, their commerce, if all the riches Portugal did not pass into hands : confequently Portugalit nifhes them with the mean make war; and their alliance the faid court is offenfive; and I

ot, it is asked, by what reason agland should be obliged to send pope to the affishance of Portugal, id not Portugal to the assistance of agland; if it is not, because Enguine and finds a compensation in the direct assistance of Portugal, by eans whereof the makes war sinft Spain and France.

104

The faid alliances were made in e beginning of this century, when ere were animofities, occasioned the preceding possession of Spain d for as long as they might laft t ofe animolities, however, are ow ended, and two brothers are offestors of Spain and Portugal; all it then be allowed between vo brothers, for the one to furnish ms to the enemy of the other? ecessity might, then, bave author zed the king of Portugal to adopt alliance contrary to his true fyfem, and to his decorum: now he ight to be glad of the necessity, which others lay upon him to make fe of his reason, in order to take e road of his glory and common stereft.

That, if the most faithful king oves his subjects, as a father, and if ought to preferve them, as king, tir Catholic and most Christia jeffies not only approve it, but her imitate it, by pitying their fubeds for fo many enlamities : hower, their majesties are not blame le for those they fuffer by wat ino rillbe, when he enters into it, with o much julice as the prefent she ght, on the contrary, to hope, by the affiftance of God, and of good allies, for new fpleador ohis crown, and the greatest adentages to his subjects : they will tion enjoy a firong and folid fyftem, VOL. V.

by that of an union with the English, the risk and uncertainty of the assistance of Great Britain to defend them against Spain, may be now seen by the very precautions taken by Portugal; even supposing, with reason, that the kingdom of Portugal ought not to be indifferent to the English; and that they ought to be offended with the proceedings of Spain.

That their most Christian and Catholic majefties do not complain of his most faithful majesty's causing his places to be repaired and garrifoned, his ports to be guarded by thips of war, and his troops to approach the places where they might be necessary : these are precautions of a wife and predent prince : their majesties might however, complain of the preference given to England, to fend succours to Portugal, for the object of those same precautions; to keep at Lolbon an English general, feveral aids de camp, and other officers; fince it is not possible but that they will concert military projects, according to the folicitations of the Portuguese minister at Lon-don, which are public, and which the English themselves do not conceal. But as his most faithful majesty is still in time to embrace the most just pasty, die two monarchs of France and Spain flatter themselves, that the preparations of the king of Portugal may acquire an ally; being well affored, that they will give him but little umbrage, and, on the contrary, that they will produce much advantage to him. If the English had been convinced, that the preparations were only against the offenders of the neutra lity, they would not have contribut

ed thereto with fuch squod willy fince they would have furnished arms against themselves; bus suggest

That his Outholic majefty is fenfible of the good will and tender nefs, which his most faithful mas jefty has thewn for him fince his accession to the throng of Spain, and particularly gof nehe readiness with which his most faithful majesty complied with the annulling the treaty of limits in Peru, by that of the 12th of Pebruary 1761, in order to avoid the confequences which might refult from the bad conduct of the officers and governors, to whom the execution of that treaty had been entrufied phowever of the friendthip and complatiance of his Catholie imajefty was motilefa remarkables when he himfelf propofed that expedient; without thinking of others which the might have made out book: what he did them and what's hed now proposes, by agreement with the most Christian king, prove, betrat the ties of blood are fromger in the mind of the Can thalicaking, others the flattering ideas of aggrandifementor aid flag

Finally Theamhaffador of Spain, and the minister plenipotentiary of France, repeat what they have already fet forth in othe memorial of the of the of March schep infut on the demand therein contained, and they declared to the most faithful kingy That, without further reprefentations or his confent; the Spanish troops, already on the frontiers, will enter Portugalo for the fingle object of advancing, till they shall obtain that the ports of Portugal be not at the disposal of the enemy q having, at the fine time, the most precise ordersy moeto commit, with outreafon, the deaft hofblity against which had foread even into eve

5.4u5

the fubjects of the most faith king jatoh pay themarin reidyn neys for whatever they hall for to them, as if the one and through belonged to the same: male. remains for this most faithful a jesty to chase, either to received troops as allies, or so refule to entrance, or sublistence, and to me pole them, as enemies : for the the two allies will take all pol precautions, on the suspicional ready too much founded, that h court of Lifbon, by intelligence, for some time past, with that of La don, will march out to meet the with English forces, in order hinder their just deligns, and a make them bloody, contrary no fentiments of their heart. That he can no more persuade sfelf that the faid treaties which fill, for fo many years palt, been Portugal and Great Britain, offentive, as is indipunted in this memorial, on vaccount of the amerce which Portugal allows to English Subjects; qualthe contype this reasons and the others pirit of all defensive treaties being generally known so all the rid, that these fate of treaties conof engagements between orthe their change chem the ibetter defend and maintain them folves the luccours which one receives m shoother, either in troops on bey, or in something else which

may be of advantage to them ; and this in the case of the treaties of league and commerce between Portugal and Great Britain, and it is what the law of God, of nature, and of nations and the universal practice of all nations, have always deemed innocent, without there ever having been any power, who would undertake to force others to break thefe fame treaties, because they find their interest in it, and would prefer the same private and particular interest to the common and universal one, of the public tranquility of neutral powers; to attack them and invade their dominions, especially among moparche fo religious as their Catholic and most Christian majesties

That the unbounded confidence, which his most faithful majetty has always had in the ties of blood, the friendship, and the good neighbourhood which he has always cultivated with his Catholic majefty, cannot be better proved, than by the filence and tranquility with which the king has feen, for a long time past, his frontiers almost blocked up and infelted; the commerce of corn prohibited, the Spanish magazines upon the faid frontiers filled with all forts of military flores, and the places fivarming with troops, without his most faithful majesty's having given the least order to his ambaffador at Madrid to know the object of these preparations, one as

That after having acted with fuch fibcority a tranquisty; and a good faith, at the time only when his most faithful majesty faw that it was necessary for him to like no to the clamours of his subjects; and to preferve his royal decorum from the universal i ceofute of dalla Europe, which had spread even into every [P] 2

public

public news paper: and at the fame time that it was known to all the world, that the kingdom of Portogal was in want of experienced officers, his most faithful majesty invited over lord Tyrawley; he alf took fome English officers and of other nations, to exercise his troops, and has been conflantly practifed in this kingdom, and as their Catholic and moft Christian majellies, and all fovereigns in general, practife alfo, without there arifing any fuspicious distrust from fuch a proceeding as hardings sto

That his most faithful majesty, paffing over in filence the reproaches against individuals, who only execute the orders of their mafters; to give an answer upon the affair of M. de la Clue's fquadron, must necessarily call to mind, that having received from the king of Great Britain, the most obliging reparation for what concerns the rights of the territory, and of the port, near which the Prench veffels were taken, and having by repeated follicitations demanded reltitution of those thips, as he has affored the most Christian king, his most faithful majesty thinks that it is more natural to obtain the reflicution of the faid ships, from the friendship of · his Britannie majesty, at a convenient opportunity, than to undertake it by the means of a precipitate war, which might perhaps render the faid restitution impracticable.

That his most faithful majesty hopes, that the folidity of thefe real fons will make upon the minds of their Catholic and most Christian majesties an impression worthy of their religion, and of their humanity; and that they will perceive the crying injuffice of purfuing against Portugal the war kindled

against Great Britain ; that & will give an example, that produce the deftruction of ments if neutral powers were to be att ed, because they have defend treaties with the belligerent pow that a maxim fo deftructive w occasion defolation in all Euro the moment a war was kindled tween two nations; and that I moft faithful majefty, under the circumflances, could not ten from the neutrality which he ado for his fyftem, without loling, en with their Catholic and moff Chil tian majelties, that good oping which he prefers to every other is tereff.avan wanthouse

ustation of a third memorial pre-ented to the secretary of state, Don Lowis da Cunha, by Dan Joseph Torrero, bis Casholic majesty's am-Sador, and M. James O'Dun, in most Christian majesty's minister plenipotentiary, on the 23d of April 1762. bom noits reform ater

bright of it is south of March

ON Joseph Torrero, his Cathor lic majefty's ambaffador, and lames O'Don, his most Chrismajesty's minister plenipotenry to the king of Portugal, ateably to the instructions and oris of their august fovereigns, to t an end to the negotiation which ty are jointly engaged in and epurfued, in order to bring his of faithful majesty over to his e interest, which although exfed to the contingencies of war, is farely for his bonour and ory, to unite his forces to those France and Spains and andeaer to shake off whe prejudicial pendency on England, which the ortuguele nation labours under ; e faid ambaffadof; and sinister enipotentiary, having loft unll opes that their mafters should at-

eir blood, than to facrifice, to purpose; either because the Porof with the honour of his tuguese monarch and his ministers, all that Portugal holds most being accustomed to this evil, do , and to fubmit be fuch ex- not perceive it, or elfe because the diany means, the become an common enemy has gained a deeard of example to all pacific fpotic power over their understanders, who will no langer be ing; fince they will not admit of to enjoy the benefit of neutra- those reasons which their Catholic whenever a war shall be kindled and most Christian mijesties have een other powers with which with fo much friendship, and fuch good intentions, represented; and knowing that although very easy, it would be absolutely useless to refute those contained in his excellency's Don Lewis da Cunha's last memorial, delivered to them the 5th of this month, they will only lay before the most faithful king, through his means, a curfory refutation thereof. tuels foundto

That it is a matter of great concern to the kings their mafters, that the most faithful king, by confesfing, that England has given him cause to break the defensive treaties, which he does in saying, that it is not of fo great, or formmediate, intereft to Portugal as to outweigh the calamities of war a if his most faithful majetty has weighed in the fame scale those of a war with England, and those of maintaining it against France and Spain, he has chosen the latter, with little regard to their power, and great difregard of their friendship, fince he joined himself, to one who has offended him, whether much or little, to offend those who have given him no other motive, than that of perfuading him to what would be most convenient for him.

The king and his ministers cannot, because they will not, be perfunded, that thele defensive treaties with the English, are offensive ones with regard to Spain and France, in this fo laudable and heroic a the arguments to the contrary. el-

ledged

[P] 3

ledged in the preceding memorials, being unanswerable; and the comparing them to those of other powers ill-grounded, his fituation and circumstances being extremely diffe-

rent from theirs.

That their most Christian and Catholic majefties, far from finding any merit in the friendly confidence of his most faithful majesty, from the silence observed by his ambafsador, at Madrid, upon the military preparations that were making and carrying on upon the frontiers of Portugal; this has from the beginning raised in them a distrust, which, to their great concern, is now confirmed by the experience of his preferring the alliance of the king of Great Britain to theirs; for otherwife he would in a friendly manner have enquired into the delign of fuch preparations, and have endeavoured to have feron foot a negotiation, which their Catholic and most Christian majesties could not immaturely folicit at the known hazard of having their views discovered by the court of Lisbon to that of London, which then held, and still holds poffession of their affections. Certain it is, that that of Lifbon had already taken the resolution within itself, which it is now obliged to discover; and that the apparent inis called the blockade and infeftation of its frontiers without speaking of it in Madrid, was a latent fire for folliciting succours in London; thus, opposing disguised preparations to open ones. That notwithstanding the court of Lisbon infifts that there is no difference between her neutrality and that of other powers, and that there is no right to force them out of it, they may be affored, that it is by no

means looked upon as a point indifference, on account of the conveniencies experienced by sin other wars with the English, a be persuaded, that if the breach in their Catholic and most Chrismsjetties should bring upon them faithful king those, which unit with the king of Great Britain is does not fear, to these will be also the diffatisfaction, in the opinion the most sound and judicious part Europe, of his having had it in power to avoid them.

That fince his most faithful jefty erroneoutly founds his own nour, and that of his crown, not delivering himfelf from the trake preflive yoke of the English, but opposing the entry of Spanish wo into Portugal, who come to his fistance and defence, their Catha and most Christian majesties for theirs in attempting it, and fuftain it with as much inflexib as his most faithful majesty, w he heroically declares, that n than abandon Portugal, he will the last tile fall from his palace, spill the last drop of his sub

blood.

And finally, that the most fail king having, upon the altername proposed to him, preferred the failing the entry of Spanish was as enemies, to admitting them friends; and confequently the mity of their Catholic and as Christian majesties to their frieschip, there is nothing more understand and even unbecoming the continuance of the above as the con

hat each, bis of lord 23, Don.

DON JOSEPH TOBRERO, LACQUES BERNARD O'DUN.

ranslation of the answer to the foregoing memorial,

DON Lewis da Cunha, in execu-tion of the orders, which he has received from the most faithful king, is master, in answer to what is contained in the memorial, which was presented to him on the 23d day of the present month of April, by his excellency Don Joseph Terero, ambaffador, from the Catholic king, and by M. James O'Dun, minister plenipotentiary from his not Christian majesty, informs their Emade

は、日本ので

That having politive orders to fetapart from the substance of the fines under confideration, the adventitious, warm expressions, fish as have hitherto never been seed between fovereigns, with which most faithful majesty has found in it nothing new, that by giving an opening to negotiation, should make him alter his former refolutions, communicated in the answers of him, the fecretary of flate, dated the 20th of March last, and the 5th of the present month of April.

That the effective rupture, which the faid allied ministers have now owned, in such clear and express words, was not matter of furprize that this unexampled negotiation was opened by notifying to his most faithful majesty, in the first memorial of the 16th of March that it had been determined be-tween the courts of Parts, and

Madrid, without any previous no-tice to his majetry, to make the neutral kingdom of Portugal the theatre of war, to oblige his most provinces and ports occupied by Spanish armies; to intimate to him, that for this purpose, the said armies were already posted upon the frontiers of this kingdom: adding to all this, that he ought not only to infringe all the treaties of peace and commerce, which he has with the crown of England, but likewise to declare an offensive war against the said crown; the whole conceived in a stile, by no means gentle or perfusive, but rather exprefling, in the flrongest terms, that the intention was not to negotiate, but to break : and his faid most faithful majefty having feen this confirmed in the fecond memorial, presented by the said Don Joseph Torrero, and M. James O Dun, on the first instant, therein declaring, that his Catholic majesty had already given ultimate orders, that his troops should enter the dominions of this kingdom, without waiting for any other answer, or consent of his most faithful majesty.

That his faid moft faithful majefty folely places his honour and glory, in being faithful to his royal word ; in the observance of the duties of his crown; and of religion and humanity, which forbid his entering into an offentive war against any power, although ever so indifferent to him, and although not allied by reciprocal treaties, which have been adhered to for this age past; as are those which sublist with the crown of England.

That their Catholic and most Christian majesties have been informed with very little fincerity, if

any body has suggested to them blockade and infestation were that any clause in the answers, which went from this court on the 20th of March, and the 5th of the prefent month of April, could be interpreted in the fense that his most faithful majefly should own, that England had given cause to break those ancient defensive alliances; because on the contrary, he owes to the crown of Great Britain, all who had determined to act of that good harmony, which is the lively, and not on the fide of in natural effect of those ancient alliances. the move and or

That his most faithful majesty, who has a high opinion of the power and friendship of their most Christian and most Catholic majesties, cannot doubt that their faid majesties would be the first to disapprove of the step of breaking his neutrality, to make an offensive war against his allies. on the manner already related.

That his faid majesty fees no other difference between his neutrality and that of other powers, than the manner in which his frontiers are belet, under no other pretence than the persuasion, that it is convenient to the courts of Paris and Madrid, that Portugal should break through all the above-mentioned ties; but furely mere conveniency without any legitimate title, has never hitherto authorized belligerent powers to attack those which are neuter, and who enjoy the advantages attending on peace.

That his most faithful majesty could with, that the blame imputed to him for not having complained that the frontiers of his kingdom were blocked up and infelted, were not fo fully proved by the faid memorials of the 16th of March, and the first instant, where it was declared in express words, which cannot be misunderstood, that the said

dered from the time of the Family compact, to invade and feize m this kingdom at which are to that blainly hew, that Ported was neither to alk nor exped to cours from the faid courts, with had joined themselves in alliance attack it; and that the latent in has atways been on the fide of that who has endeavoured, and dog or ly endeavour to defend and prefen himself in peace, which, by a laws of God, of nature, and a tions, he has a right to do.

That if his Catholic majesty wer troly informed of what has has pened in preceding wars, he would find, that his crown and lebich have reaped many and great be hefits, upon feveral occasions, from the peace inseparable from them trality of Portugal, and of who there are in Madrid many living witnesses; and that it has not been the crown of England alone which has profited by the neutrality and peace of Portugal

That, finally, his most faithful majesty understands that he has the fame right to defend his kingdon from invasion, which is permitted to every private person, who is itdifpenfibly obliged to defend his own house against any body that flould enter it without his confent.

And that his majetty confining himfelf to this fole point of the ntural defence of the neutrality and peace of his kingdoms, ports, and fubjects, will exert his utmost effort, together with his allies, in cafe, notwithstanding all that has been related, he be rattacked; and has given the necessary orders, in his fecretary's office, that Don Joseph Torrero,

Adinam

On the death of our most august d dear aunt, the empress Elizaeth Petrowna, of glorious memory, Il true patriots (now our most faithal subjects) grouning for the loss f fo tender a mother, placed their paly confolation in obeying her nehew, whom the had named for her acteffor, that they might shew ereby, in some degree, their acnowledgments to their deceased lovereign. And, although they on found out the weakness of his ad, putt to rule to walt an empire, they imagined he would have known his own infufficiency. Whereupon they fought our materpal affiftance in the affairs of gorasy have the honour to domeur

But when absolute power falls to the lot of a monarch, who has not sufficient virtue and humanity to place just bounds to it, it degenerates into a fruitful source of the most pernicious evils. This is the sum, in short, of what our native country has suffered. She struggled to be delivered from a sovereign, who, being blindly given up to the most dangerous passions, thought of nothing but indulging them, without employing himself in the welfare of the empire committed to his care.

During the stime of his being grand duke, and heir to the throne of Russia, he often caused the most and of none of the standard of the standa

bitter griefs to his most august aunt and fovereign, fine truth of which all our court knows) showever he might behave himfelf outwardly: being kept under her eye by her tenderness, he looked upon this affection towards him as an insupport able yoke. He could not however disguise himself so well, but it was perceived by all our faithful fobjects, that he was poffeffed of the most audacious ingrasitude, which he fometimes shewed by perfonal contempt, fometimes by an avowed hatred to the nation. At length, throwing afide his cloak of hypocrify, he thought it more fit to let loose the bridle of his passions, than conduct himself as the heir of fo great an empire. In a word, the least traces of honour were not to be perceived in him. What were the confequences of all this?

He was fearcely affured that the death of his aunt and benefactress approached, but he banished her memory entirely from his mind; nay, even before she had sent forth her last groan. He only cast an eye of contempt on the corple exposed on the bier; and, as the ceremony at that time required obliged him to approach it, he did it with his eyes manifestly replete with joy; even intimating his ingratitude by his words. I might add, that the obsequies would have been nothing equal to the dignity of lo great and magnatismous a fovereign, if our tender respect to her, cemented by the ties of blood, and the extreme affection between us, had not made the care of it wouty to us.

adHeviniagined that it was not to the Supreme Being, but only to chance, that he was indebted for absolute power, and that he had yd amosiavo saines significant and two doing dies as a significant and in in his hands, not for the passe of his fables. Adding therefalls license to absolute power, he made all the changes in the fatte, which the weakness of his mind could laggest, to the opposition of the people.

and laving affaced from his heart, den the least truces to the whole thodox sellgion falthough he had rises fufficiently taught the princi-ples thereof) he began first by root-ing out this true religion, established to long in Rullia, by abfenting nfelf from the house of God, and of prayers, in so open a manmer, that fune of his fubjects, exwited by confeience and honesty, feeing his irreverence and contempt of the rices of the church, or rather she milleries be made of them, and fcandalizing them by his behaviour, dared to make remonstrances to him concerning it; who, for fo doing, Schroely eskaped the refentment which they might have expected from fo capricions a fovereign, whose power was not limited by any haan laws. He even intended to defroy she diurehes, and ordered He perdime to be pulled down. He perown :houses, whose infirmities hind them from vifiting the house of God. Thus he would have dosored over the faithful, in enwouring so flife in them the fear ent God, which the holy feripture treaches us to be the beginning of wildom.

Prom this want of zeal towards G od, and contempt of his laws, refused that from to the civil and natural have of his kingdom; for, having but an only fon, which God had given us, the grand duke Paul Penrowitz, he would not, when he

estended the throne of Russian clare him for his successor; the ing reserved for his caprice, at tended to the detriment of us of our soe, having an inclination overthrow the right that his a had vested in him, and to make government of our native compass into the hands of strange, contradicting this maxim of namitight, according to which noto can transmit to another more in he has received himself.

Although with great grief w faw this intention, we did not w lieve that we ourfelves, and or most dear fon, should have beene poled to a perfecution fo ferm but all persons of probity, having observed that the measures that parfaed, by their effects, mail at that they had a natural tender to our ruin, and that of our dearfie ceffor, their generous and pic hours were juffly alarmed: An mated with seal for the interest their native country, and aftonish at our patience under thefe her perfecutions, they fecretly inform us, that our life was in danger, i order to engage us to undertake the burthen of governing fo large empire.

While the whole nation were at the point of seffifying their disprobation of his measures, he was them the more, by subverting at those excellent arrangements elablished by Peter the Great, our medical predecessor, of glorious memory, which that true father of his country accomplished by indehing able pains and labour, through the whole course of a reign of thirty years. The late Peter the Third despried the laws of the empire, and her most respectable tribusals.

fuch a degree, that he could not n bear to hear them mentioned. After one bloody war, he rashly ered upon another, in which the erefts of Ruffia were no ways conned. He entertained an insupere aversion to the regiments of ards, which had faithfully ferved illuftrious ancestors, and made ovations in the army, which, far om exciting in their breafts noble ntiments of valour, only ferved discourage troops always ready to ill their best blood in the cause of eir country. He changed entirethe face of the army; nay, it en feemed, that by dividing their bits into fo many uniforms, and ving them fo many different emlishments, for the most part fanfical to the greatest degree, he innded to infuse into them a suspion that they did not, in effect, long to one mafter, and thereby rovoke the foldiers, in the heat of e battle, to flay one another; alough experience demonstrated, at uniformity in drefs had not a tile contributed towards unani-

ilap-

Inconfiderately and incessantly ent on pernicious regulations, he alienated the hearts of his fubcts, that there was scarce a fingle usion to be found in the nation ho did not openly express his disaprobation, and was even defirous to ke away his life: But the laws of od, which command fovereign rinces to be respected, being deepengraved on the hearts of our thful subjects, restrained them, nd engaged them to wait with pance, till the hand of God struck e important blow, and by his fall elivered an oppressed people. Uner those circumstances, now laid fore the impartial eyes of the YOL. Y.

public, it was, in fact, impossible, but our foul should be troubled with those impending woes which threatened our native country, and with that perfecution which we; and our most dear son; the heir of the Rusfian throne; unjuftly fuffered : being almost entirely excluded from the imperial palace; in fuch fort, that all who had regard for us, or rather those who had courage enough to speak it (for we we have not been able to find that there is one person who is not devoted to our interest). by expressing their sentiments of refpect due to us, as their emprefs, endangered their life, or at leaft their fortune. In fine, the endeas vours he made to ruin ds, role to fuch a pitch, that they broke out in public, and then charging us with being the cause of the murmars, which his own improdent measures occasioned, his resolution to take away our life openly appeared. But being informed of his purpose, by some of our trusty subjects, who were determined to deliver their country, or perish in the attempt, relying on the aid of the Almighty, we chearfully exposed our person to danger, with all that magnanimity which our native country had a right to expect, in return for her affection to us. After having invoked the Most High, and reposed our hope in the divine favour, we refolved also either to facrifice our life for our country, or fave it from bloodshed and calamity. Scarcely had we taken this refolution, by the direction of favouring Heaven, and declared our affent to the deputies of the empire, than the orders of the flate crouded to give us afforances of their fidelity and fubmiffion.

It now remained for us, in purfeance of the love we bore our faithful subjects, to prevent the confequences which we apprehended, in case of the late emperor's inconfiderately placing his confidence in the imaginary power of the Holstein troops, (for whose fake he stayed at Oranjebaum, living in indolence, and abandoning the most pressing exigencies of the state) and there occasioning a carnage, to which our guards and other regiments were ready to expose themfelves, for the fake of their native country, for ours, and that of our fuccessor. For these reasons we looked upon it as a necessary duty towards our subjects (to which we were immediately called by the voice of God) to prevent fo great a misfortune, by prompt and proper measures. Therefore, placing ourfelves at the head of the bodyguards, regiment of artillery, and other troops in and about the royal refidence, we undertook to disconcert an iniquitous defign, of which we were, as yet, only informed in part.

But scarcely were we got out of the city, before we received two letters from the late emperor, one quick on the heels of the other .-The first by our vice-chancellor the prince Gallitzin, entreating us to allow him to return to Holstein, his native dominions; the other by major general Michel Ismailoff, by which he declared, that of his own proper motion he renounced the crown and throne of Russia. In this last he begged of us to allow him to withdraw to Holftein with Elizabeth Worontzoff Goudowick. These two last letters, stuffed with flattering expressions, came to our hands a few hours after he had

given orders for putting us to deal as we have been fince informe from the very persons who were pointed to execute those unnature orders.

In the mean time, he had H resources left him, which were a arm against us his Holstein troom and some small detachments the about his person; he had, also, i his power feveral personages of di tinction belonging to our court; a he might therefore have compelled u to agree to terms of accommodition ftill more hurtful to our coutry, (for after having learned what great commotions there were among the people, he had detained the as hostages at his palace of Oranja baum, and our humanity would never have confented to their de struction, but, to fave their live, we would have rifked feeing a put of those dangers revived by an accommodation) feveral persons of high rank about our person requely ed us to fend him a billet in return, proposing to him, if his intention were fuch as he declared them w be, that he should inflantly fend w a voluntary and formal renunciation of the throne, wrote by his own hand, for the public fatisfaction. Major general Ismailoff carried this proposal, and now behold the writing which he fent back.

During the short space of make solute reign ower the empire of Rush. I became sonsible that I was not all to support so great a burthen, and that my abilities where not equal to the task of governing so great an empire either as a sovereign, or in any other especity subasever. I also foreign the great troubles which must have some thence arosen and have been so sowed with the total ruin of the ar

PETER.

It is thus, without fpilling one rop of blood, that we have afended the Ruffian throne, by the fistance of God, and the approvng fuffrages of our dear country.fumbly adoring the decrees of Diine Providence, we affure our athful subjects, that we will not ail, by night and by day, to inoke the Most High to bless our tepter, and enable us to wield it or the maintenance of our orthoox religion, the fecurity and deence of our dear native country, ind the support of justice; as well is to put an end to all miferies, iniquities, and violences, by strengthming and fortifying our heart for the public good. And as we arently wish to prove effectually how far we merit the reciprocal love of our people, for whose happiness we schowledge our throne to be appointed, we folemnly promise, on our imperial word, to make fuch trangements in the empire, that the government may be endued with an intrinsic force to support itfelf within limited and proper bounds; and each department of the state provided with wholesome laws and regulations, sufficient to maintain good order therein, at all times, and under all circumstances.

By which means we hope to establish hereaster, the empire and our sovereign power, (however they may have been formerly weakened) in such a manner as to comfort the discovaged hearts of all true patriots. We do not in the least doubt but that our loving subjects will, as well for the salvation of their own souls, as for the good of religion, inviolably observe the oath which they have sworn to us in prefence of the Almighty God; we thereupon assure them of our imperial favour.

Done at Petersburg, July 6, 176 :.

Her imperial majesty's declaration, &c. on the death of the emperor her husband.

WE Catharine II. by the grace of God, empress and autocratress of all the Russias - Greeting, &c.

The 7th day after our accession to the throne of all the Russias, we received information, that the late emperor Peter III. by the means of a bloody accident in his hinder parts, commonly called piles, to which he had been formerly subject, obtained a most violent, griping, cholic. That therefore, we might not be wanting in Christian duty, nor disobedient to the holy commandment by which we are obliged to preferve the life of our neighbour, we immediately ordered that the faid Peter should be furnished with every thing that might be judged necessary to prevent the dangerous dangerous consequences of that accident, and to restore his health by the fuccours of medicine. But to our great regret and affliction we learned yesterday evening, that by the permission of the Almighty, the late emperor departed this life. We have therefore ordered his body to be transported to the monastery of Newsky, in order to its being buried there. At the same time with our imperial and motherly voice, we exhort our faithful subjects to forget and forgive what is past, to pay the last duties to his body, and to pray to God fincerely for the peace of his foul; befeeching them, however, at the same time to confider this unexpected and sudden death as a special effect of the Divine Providence, whose decrees prepare for us, for our throne, and for our country, things only known to his holy will. tust TOR and that of his kingdom,

Papers relating to the re-establishment of peace:

Declaration delivered by the emperor of Russia's order, to the imperial, French, and Swedish ministers residing at St. Petersburg.

HIS imperial majefly, who, upon his happy accession to the throne of his ancessors, looks upon it to be his principal duty to extend and augment the welfare of his subjects, fees with extreme regret, that the slames of the present war, which has already continued for fix years, and has been for a long time burthensome to all the powers engaged in it, far from tending now to a conclusion, are, on the metrary, gathering fresh strength, at the great missortune of the fered nations; and that mankind has much the more to suffer from a school has been hitherto subjects for many vicissitudes, is equally a posed to them for the future.

Wherefore his imperial majely, compassionating, through his his mane disposition, the effusion of innocent blood, and being defirm on his part, of putting a stop to great an evil, has judged it neces fary to declare to the courts in all ance with Ruffia, that, preferring to every other confideration, the first law, which God prescribes w fovereigns, which is the preferm tion of the people intrufted to them, he withes to procure peace to it empire, to which it is so necessary and of fo great value; and, at the fame time, to contribute, as mod as may be in his power, to the neftablishment of it throughout all Europe.

It is in order to this, that his imperial majesty is ready to make a facrifice of the conquells made by the arms of Rustia, in this war, it hopes that the allied courts will, of their part, equally prefer the refloration of peace and tranquility, to the advantages, which they might expect from the war, and which they cannot obtain but by a continuance of the effation of human blood. And to this end, his im perial majesty, with the best intention, advises them, to employ, of their fide, all their power toward the accomplishment of fo great and fo falutary a work and min .abnuods mon

HAT animated with the same zeal, and being of the same opion, as his imperial majefty, with gard to the falutary work of eace, and to the putting an end to e troubles and ravages that defote Germany, the was ready to ocur with him therein; but that, that end, the defired his impeal majesty to furnish her with the eans of beginning the negotiation, wimparting to her the proposed rms of peace, which she would, thout loss of time, communicate her high allies, who, as well as erfelf, would be always ready to o-operate in a matter so much dered, provided the terms were not admissible, and contained nothing parious either to their honour, or er honour.

be answer given by the French court to the declaration.

THE king maintaining, with regret, these fix years past, a wo-fold war for his own defence ind that of his allies, has fufficienty manifested, on every occasion, low much he abhors the effusion of luman blood, and his constant deire to put an end to fo cruel a courge, His personal difinterestedhels, the steps which he thought tould be taken confistent with his lignity, and the facrifices which he did offer, in order to procure to Europe the desireable blessing of peace, are fure pledges of the bumane fentiments with which his heart abounds. But, at the same tine, his paternal tendernois, which makes the happiness and preservation of his subjects a duty to him, cannot make him forget the first law that God prescribes to sovereigns, even that which constitutes the public fafety, and fixes the condition of nations and empires, fidelity in executing treaties, and punctuality in performing engagements to their full extent, preferably to every other confideration.

'Tis with this view, that, after having given fo great examples of constancy and generofity, his majefly declares that he is ready to liften favourably to propositions for a solid and honourable peace, but will always act in the most perfect concert with his allies; that he will receive no counsels but such as shall be dictated to him by honour and probity; that he should think himfelf guilty of a defection, in lending a hand to fecret negotiations; that he will not tarnish his glory, and that of his kingdom, by abandoning his allies; and that he refts affured each of them will, on their part, faithfully adhere to the same principle.

Answer given by the king of Poland, electoral of Saxony, to the Same declaration.

ALL my allies wish as much as myself, that the public tranquility may be restored upon solid fonudations. It is well known to all Europe, that I did not feek the war; but, on the contrary, employed every means to keep the calamities of it at a distance from my dominions. My love to mankind in general, and to my own subjects in particular, ought to engage me to facilitate as much as in me lies, the restoration of peace, and to exer-

[2] 3

table pretentions. I am of opinion, that a just and folid peace cannot be agreed on, but by the congress proposed and accepted by all the

powers at war.

I place a full confidence in the friendship of your imperial majefly, to whom the house of Saxony is bound by facred ties. It is not unknown to your majesty, that Saxony hath been attacked merely on account of its connections with the Ruffian empire; and that the king of Prussia has taken occasion to charge us with entering into defenfive treaties with that empire against him. We therefore flatter ourselves with the hope, that fo ancient and fo equitable an ally of Saxony will not fuffer our dominions, which are already reduced to the utmost diftreis, as well by exorbitant contributions, as by the alienation of our revenues, and of the funds which were allotted for the payment of debts, to be completely ruined.

The whole world agrees, that we are intitled to an equitable reflitution and reparation of the damage sustained. But notwithslanding all these considerations, and though all the powers at war shew themselves inclined to contribute to the general pacification, yet Saxony remains threatened with irretrievable ruin.

We therefore hope that your majefty's philanthropy and magnanimity will prevail with your majelty
to take care that, before all things,
the electorate of Saxony be speedily evacuated, in order thereby to
put an end to the calamities
which overwhelm it; this being
the means of facilitating and accelerating the conclusion of a general peace.

Speech made to the king by the de Nivernois, ambassador extendinary and plenipotentiary for the most Christian king, on presenting his credentials to majesty the 24th of Nov. 1761.

Permit me, Sir, to felicitate myfelf at your feet, on being chosen by the king, my master, to serve, between your majesty and him, as the organ of the noble sentiments of two hearts so worthy of each other, and to be employed in this blessed work which insures your majesty's glory by giving happiness

to the whole world.

The humble address of the right hon. the lords spiritual and temporal in parliament assembled, December 9, 1762, on occasion of his majesty's baving communicated to them the preliminary articles of peace, concluded at Fontainbleau, the 3d of Nov. 1762,

Most gracious sovereign,

WE, your majesty's most dutiful and loyal subjects, the lords spiritual and temporal in parliament assembled, beg leave to return your majesty our sincerest acknowledgments, for the important communication, which your majefty has been graciously pleased to make to us, of the preliminary articles of peace, concluded the third day of last month at Fontainbleau, with the crowns of France and Spain:

And to express, in the most dutiful manner to your majesty, the satisfaction which we have received, at the soundation laid by these articles for a treaty of peace, which will greatly redound to your majesty's honour, and the real benefit of your kingdoms; and our entire reliance, that the same care and attention will be shewn for the perfecting of this great work by the definitive treaty.

We think it our indispensible duty to lay before your majesty this early testimony of our warmest gratitude; seeing the great object of the war so fully answered, all proper attention shewn to your majesty's allies, a vast extent of empire added to the British crown, new sources opened for the trade and manufactures of this nation, and stability and duration insured, under the blessing of Providence, to these great and national advantages.

and national advantages.

We are no less sensible of the prudence and wisdom which has guided your majesty's conduct on this great occasion, than of the humane disposition and paternal affection to your subjects, which your majesty has shewn, in putting a safe and honourable end to a burthen-

fome and expensive war.

We beg leave to affire your majeffy, that we shall immediately apply ourselves to improve the bleffings of peace, by promoting the economy which your majeffy has wifely recommended, and which is so necessary to the dignity of the

His majesty's most gracious answer.

Gentlemen of the house of commons, Return you my bearty thanks for this most loyal and affectionate address.

Your approbation of the measures I have taken for restoring peace, and of the terms on which it is to be concluded, gives me the highest satisfac-

The affection and gratitude of my people are the most pleasing return I can receive for my endeavours to promote their happiness.

The Definitive Treaty of friendship and peace between his Britannic majesty, the most Christian king, and the king of Spain. Concluded at Paris, the 19th day of February, 1763. To which the king of Portugal acceded the same day.

In the name of the most Holy and Undivided Trinity, Father, Son, and Holy Ghost. So be it.

BE it known to all those to whom it shall, or may, in any manner, belong.

It has pleased the Most High to diffese the spirit of union and concord among the princes, whose divisions had spread troubles in the sour parts of the world, and to inspire them with the inclination to cause the comforts of peace to succeed to the missortunes of a long and bloody war, which, having arisen between England and France, during the reign of the most serence and most potent prince, George the se-

cond, by the grace of God, king of Great Britain, of glorious memory, continued under the reign of the most ferene and most potent prince, George the third, his fucceffor, and, in its progress, communicated itself to Spain and Portugal: confequently, the most ferene and most potent prince, George the third, by the grace of God, king of Great Britain, France, and Ireland, duke of Brunswick and Lunenbourg, arch-treasurer, and elector, of the Holy Roman Empire; the most ferene and most potent prince, Lewis the fifteenth, by the grace of God, most Christian king; and the most ferene and most potent prince, Charles the third, by the grace of God, king of Spain and of the Indies, after having laid the foundation of peace in the preliminaries, figned at Fountainbleau the 3d of November laft; and the most ferene and most potent prince, Don Jofeph the first, by the grace of God, king of Portugal and the Algarves, after having acceded thereto, determined to condpleat, without delay, this great and important work. For this purpose, the high contracting parties have named and appointed their respective ambaffadors extraordinary, and ministers plenipotentiary, viz. his facred majesty, the king of Great Britain, the most illustrious and most excellent lordy John, duke and earl of Bedford, marquisa of Tavillock, &c. his minister of flate, lieutenant general of his armies, keeper of his privy seal, sknight of the most noble, order of the garter, and his ambaffador vextraordinary and minister pleaspotentiary to this most Christian majesty ; his facred majesty the most Christian king,

the most illustrious and most excellent ford Cæfar Gabriel de Choifeul, duke of Praffin, peer of France, knight of his orders, lieutenant general of his armies, and of the province of Brittany, councellor in all his councils, and minister and fecretary of state, and of his commands and finances; his facted majesty the Catholic king, the most illuftrious and most excellent lord, Don Jerome Grimaldi, marquis de Grimaldi, knight of the most Christian king's orders, gentleman of his Catholic majesty's bed chamber in employment, and his ambaffador extraordinary to his most Christian majesty; his facred majesty the most Faithful king, the most illustrious and most excellent lord, Martin de Mello and Caftro, knight professed of the order of Chrift, of his most Faithful majesty's council, and his ambaffador and minister plenipotentiary to his most Christian majesty.

Who, after having duly communicated to each other their full powers, in good form, copies whereof are transcribed at the end of the present treaty of peace, have agreed upon the articles, the tenor

Art. I. There shall be a christian, universal, and perpetual peace, as well by sea as by land, and a sincere and constant friendship shall be reestablished between their Britannic, most Christian, Catholic, and most Faithful majesties, and between their heirs and successors, kingdoms, dominions, provinces, countries, subjects, and vassals, of what quality or condition soever they be, without exception of places, or of persons: so that the high contracting parties shall give the greatest attention to maintain between themselves and their

faid dominions and fubjects, this ciprocal friendflip and correspond dence, without permitting, on & ther fide, any kind of hostilities, h fea or by land, to be committed from henceforth, for any cause, a under any pretence whatfoever, and every thing shall be carefully avoit ed, which might hereafter, prep dice the union happily re-establish. ed, applying themselves, on the contrary, on every occasion, to procure for each other whatever mit contribute to their mutual glory, itterests, and advantages, without giting any affiftance or protection, directly or indirectly, to those who would cause any prejudice to either of the high contracting parties; there shall be a general obliviond every thing that may have been done or committed before or finte the commencement of the way which is just ended.

III. All the prisoners made, on all fides, as well by land as by fea, and the hoftages carried away during the war, and to this day, shall be restored without ransom, fix weeks at lateft, to be computed from the day of the exchange of the ratification of the prefent treaty, each crown respectively paying the advances, which shall have been made for the subsistence and maintenance of their prisoners by the lovereign of the country where they shall have been detained, according to the attefted receipts and estimates, and offer authentic vouchers, which shall be furnished on one fide and the other: and fecurities shall be reciprocally given for the payment of the debts which the priloners shall have contracted in the countries where they have been detained until their entire liber:y. And all the ships of war and merchant vessels which shall have been raken fince the expiration of the terms agreed upon for the ceffation of hostilities by fea, shall be likewife restored bona fide, with all their crews and cargoes : and the execution of this article shall be proceeded upon immediately after the exchange of the ratifications of this

IV. His most Christian majesty renounces all pretentions which he has heretofore formed, or might form, to Nova Scotia, or Acadia, in all its parts, and guaranties the whole of it, and with all its dependencies to the king of Great Britain: moreover, his most Chriftian majefty cedes and guaranties to his faid Britannic majesty, in full right Canada, with all its dependencies, as well as the illand of Cape Breton, and all the other illands and coasts in the gulph and river of St. Lawrence, and, in general, every thing that depends on the faid countries, lands, islands, and coasts, with the fovereignty, property, possession, and all rights acquired by treaty or otherwife, which the most Christian king, and the crown of France, have had, till now, over the faid countries, illands, lands, places, coafts, and their inhabitants, so that the most Christian king cedes and makes over the whole to the faid king, and to the crown of Great Britain, and that in the most ample manner and form, without reffriction, and without any liberty to depart from the faid cession and guaranty, under any pretence, or to diffurb Great Britain in the possessions abovementioned. His Britantic majefty on his fide, agrees to grant the liberty of the Catholic religion to the inhabitants of Canada: he will

con-

confequently, in ive the most effecqual orders o that his new Roman Catholic inbjects may profes the worthin of their religion, according to the rites of the Romish turch, as fan as the laws of Great Britain permit. His Britannic majefty forther agrees that the French phabitants, or others, who had been the subjects of the most Chrithian king in Canada, may retire with all fafety and freedom, whereever they shall think proper, and may fell their estates, provided it be to subjects of his Britannic majesty, and bring away their effects, as well as their persons, without being reftrained in their emigration, under any pretence whatfoever except that of debts or of criminal profecutions athe term, limited for this emigration, shall be fixed to the fpace of eighteen months, to be computed from the day of the exchange of the ratifications of the

prefent treatyeds of griggo W. The subjects of France shall have the liberty of fifting and drying on a part of the coafts of the island of Newfoundland, fuch as is specified in the 13th article of the treaty of Utreaht ; which article is renewed and confirmed by the prefent treaty, (except what relates to the island of Cape Breton, as well as to the other oillands, and coasts in the mouth and in the gulph St. Lawrence) and his Britannic majeffy confents to leave the subjects of the most Christian king the liberty of fishing in the gulphof Sta Lawrence, on condition that the Subjects of France do not exercise the faid fiftery but as the diffance of three leagues from alk the coalts belonging to Great Britain, as well those of the continent is those of the illands fituaced in the faid gulph of or ought to poffefs, on the left fide

St. Lawrence. And as to what me lates to the fiftery on the coaff of the illand of Cape Breton out of the faid gulph, the subjects of the mot Christian king shall not be per mited to exercise the faid fifter. but at the diffance of fifteen league from the coasts of the island of Cane Breton; and the fishery on the coaffs of Nova Scotia or Acadia and every where elfe out of the faid gulph, shall remain on the foot of former treaties. at mod man

VIII. The king of Great Britain shall restore to France the islands of Guadaloupe, of Marie Galante, of Defirade, of Martinico, and of Belleisle; and the fortresses of these islands shall be restored in the same condition they were in, when they were conquered by the British arms; provided that his Britannic majesty's subjects, who shall have fettled in the faid iflands, or those who shall have any commercial affairs to fettle there, or in the other places restored to France by the present treaty, thall have liberty to fell their lands and their effates, to lettle their affairs, to recover their debts, and to bring away their effects; as well as their persons, on board vessels, which they shall be permitted to fend to the faid islands, and other places teffored as above, and which shall lerve for this die only, without be religion, or under any other pretence whatfoever, sexcept that of debts, or of criminal profecutions ; and for this purpole, the term of eighteen months is allowed to his Britannic majesty's subjects, to be computed from the day of the exchange of the ratifications of the present treaty; but, as the liberty granted to his Britannic majesty's fubjects, to bring away their perfons and their effects, in veffels of their nation, may be liable to abufes, if precautions were not taken to prevent them : it has been expresty agreed between his Britannie majesty and his most Christian majesty; that the number of English vessels, which shall have leave to go to the faid islands and places restored to France, shall be limited, as well as the number of tons of each one; that they shall go in ballast; shall fet fail at a fixed time; and shall make one voyage only, all the effects, belonging to the English, being to be embarked at the fame time. It has been further agreed, that his most Christian majesty shall cause the necessary passports to be given to the faid veffels; that for the greater fecurity, it shall be allowed to place two French clerks, or guards, in each of the faid veffels, which shall be visited in the landing places, and ports of the faid islands, and places restored to France, and that the merchandize, which shall be found therein shall be most Christian king the .bstshinoo

to recover their debts, and to bring away their effects; as well as their persons, on board vessels, which they shall be permitted to send to of Grenada, and of the Grenadines, the said islands, and other places testored as above, and which shall serve for this die only, without be inferted in the 19th article for those ing restrained on adopunt of their of Canada, and the partition of Canada, and the partition of

the islands, called Neutral, is agreed and fixed, so that those of St. Vincent, Dominica, and Tobago. shall remain in full right to Great Britain, and that of St. Lucia shall be delivered to France, to enjoy the fame likewife in full right; and the high contracting parties guaranty the partition fo flipulated.

X. His Britannic majesty shall reftore to France the island of Goree, in the condition it was in when conquered : and his most Christian majesty cedes, in full right, and guaranties to the king of Great Britain, the river Senegal, with the forts and factories of St. Lewis, Podor, and Galam; and with all the rights and dependencies of the faid

river Senegal.

- 1 -

XI. In the East Indies, Great Britain shall restore to France, in the condition they now are in, the different factories which that crown poffessed, as well on the coast of Coromandel and Orixa, as on that of Malahan, as also in Bengal, at the beginning of the year 1749. And his most Christian majesty renounces all pretention to the acquifitions which he had made on the coast of Coromandel and Orixa, fince the faid beginning of the year His most Christian majesty shall reflore, on his fide, all that he may have conquered from Great Britain, in the East Indies, during the prefent war; and will expresty cause Nattal and Tapanoully, in the island of Sumatra, to be restored; he engages further, not to erect fortifications, or to keep troops in any part of the dominions of the Subah of Bengal. And in order to preferve future peace on the coast of Coromandel and Orixa, the English and French shall acknowledge Mahomet Ally Khan for the lawful

Nabob of the Carnatick, and Sala hat Jing for lawful Subah of the Da can; and both parts shall renounce all demands and pretentions of fa tisfaction, with which they might charge each other, or their India allies, for the depredations, or pil lage, committed on the one fide or on the other, during the war.

XII. The island of Minorca shall be restored to his Britannic majesty, as well as Fort St. Philip, in the fame condition they were in, when conquered by the arms of the most Christian king; and with the artik lery which was there, when the faid island and the said fort were taken.

XIII. The town and port of Dunkirk shall be put into the state fixed by the last treaty of Aix h Chapelle, and by former treaties. The cunette shall be destroyed immediately after the exchange of the ratifications of the present treaty, as well as the forts and batteries which defend the entrance on the fide of the fea; and provision shall be made, at the same time, for the wholesomeness of the air, and for the health of the inhabitants, by fome other means to the farisfaction of the king of Great Britain.

XIV. France shall restore all the countries belonging to the electorate of Hanover, to the landgrave of Helle, to the duke of Branswick and to the count of La Lippe Buckeburgh, which are, or shall be occupied by his most Christian majefty's arms: the fortreffes of thele different countries shall be restored in the fame condition they were in when conquered by the French arms : and the pieces of artillery, which shall have been carried ellewhere, shall be replaced by the fame number, of the same bore, weight, and metal ... Dina.

XVI. The decision of the prizes made, in the time of peace, by the subjects of Great Britain, on the spaniards, shall be referred to the courts of justice of the admiralty of Great Britain, conformable to the rules established among all nations, so that the validity of the said prizes, between the British and Spanish nations, shall be decided and judged, according to the law of nations, and according to the treaties, in the courts of justice of the nation, who shall have made the capture.

XVII. His Britannic majesty shall

cause to be demolished all the fortifications which his Subjects shall have erected in the bay of Honduras, and other places of the territory of Spain in that part of the world, four months after the ratification of the present treaty: and his Catholic majefty shall not permit his Britannic majesty's subjects, or their workmen, to be diffurbed, or molested, under any pretence whatfoever, in the faid places, in their occupation of cutting, loading, and carrying away logwood: and for this purpose, they may build without hindrance, and occupy without interruption, the houses and magazines which are necessary for them, for their families, and for their effects: and his Catholic majesty assures to them, by this article, the full enjoyment of those advantages, and powers, on the Spanish coasts and territories, as above stipulated, immediately after the ratifications of the prefent treaty.

XVIII. His Catholic majesty defiss, as well for himself, as for his successors, from all pretentions which he may have formed; in savour of the Guipuscoans, and other his subjects, to the right of fishing in the neighbourhood of the island of Newfoundland.

XIX. The king of Great Britain shall restore to Spain all the territory which he has conquered in the island of Cuba, with the fortress of the Hayanna; and this fortress, as well as the other fortresses of the said island, shall be restored in the same condition they were in when conquered by his Britannic majesty's arms; provided, that his Britannic majesty's subjects, who shall have settled in the said island, restored to Spain by the present treaty, or those who shall have any commercial af-

fairs to fettle there, shall have fiberty to fell their lands, and their estates, to fettle their affairs, to recover their debts, and to bring away their effects, as well as their persons, on board vessels which they shall be permitted to fend to the faid island restored as above, and which shall serve for that use only, without being restrained on account of their religion, or under any other pretence whatfoever, except that of debts, or of criminal profecutions: and for this purpole, the term of eighteen months is allowed to his Britannic majesty's subjects, to be computed from the day of the exchange of the ratifications of the present treaty. But, as the liberty granted to his Britannic majefty's fubjects, to bring away their perfons, and their effects, in veffels of their nation, may be liable to abuses, if precautions were not taken to prevent them; it has been expresly agreed, between his Britannic majetty and his Catholic majesty, that the number of English vessels, which shall have leave to go to the faid island restored to Spain, shalf be limited, as well as the number of tons of each one; that they shall go in ballaft; fhall let fail at a fixed time; and shall make one voyage only: all the effects belonging the English being to be embarked at the same time: it has been further agreed, that his Catholic majesty shall cause the necessary passports to be given to the faid veffels; that, for the greater security, it shall be allowed to place two Spa-nish clerks, or guards, in each of the faid veffels, which shall be visited in the landing places, and ports of the faid island restored to Spain, and that the merchandize, which shall be found therein, shall be confifcated.

XX. In confequence of the ref tution dipulated in the precide article, his Catholic majeffy co and guaranties, in full right, to be Britannic majesty, Florida, with for St. Augustin, and the bay of Penf cola, as well as all that Spain pel feffes on the continent of North America, to the east, or to the fouth 'east, of the river Mishippi and, in general, every thing the depends on the faid countries and lands, with the fovereignty, pro-perty, possession, and all right, acquired by treaties or otherwise which the Catholic king, and the crown of Spain, have had, till now, over the faid countries, lands, places and other inhabitants; fo that the Catholic king cedes and makes over the whole to the faid king, and to the crown of Great Britain, and that in the most ample manner and form. His Britannic majesty agrees on his fide, to grant to the inhabitants of the countries, above ceded, the liberty of the Catholic religion? he will confequently give the mon express and the most effectual orders, that his new Roman Catholic subjects may profess the worthip of their religion, according to the rites of the Romish church, as far as the laws of Great Britain permit! his Britannic majesty further agrees, that the Spanish inhabitants, or others who had been subjects of the Catholic king in the faid countries, may retire, with all fafety and freedom, wherever they think proper; and may fell their estates, provided it be to his Britannic majefty's fobjects, and bring away their effecti, as well as their persons, without being restrained in their emigras tions, under any pretence whatfoever, except that of debts, or thminal profecutions : the term, !-

XXI. The French and Spanish pops shall evacuate all the territos, lands, towns, places, and caes, of his most Faithful majesty, Europe, without any referve, hich shall have been conquered by e armies of France and Spain, and all restore them in the same contion they were in when conquered, ith the fame artillery, ammunion, which were found there: and ith regard to the Portuguele conies in America, Africa, or in the if Indies, if any change shall ave happened there, all things all be restored on the same footg they were in, and conformably the preceding treaties, which fubfled between the courts of France, ain, and Portugal, before the elent war.

XXII. All the papers, letters, doments, and archives, which were and in the countries, territories, was, and places, that are reftor-, and those belonging to the antries ceded, shall be, respectively adbona fide, delivered, or furnished the same time, if possible, that offession is taken, or, at latest, or months after the exchange of e ratifications of the present treaty. whatever places the faid papers documents may be found.

XXIII. All the countries and tritories, which may have been orquered, in whatfoever part of eworld, by the arms of their Bri-VOL. V.

tannic and most Faithful majesties, as well as by those of their most Christian and Catholic majesties, which are not included in the prefent treaty, either under the title of cellions, or under the title of reftitutions, shall be restored without difficulty, and without requiring

any compensation.

XXIV. As it is necessary to assign a fixed epoch for the restitutions, and the evacuations, to be made by each of the high contracting parties; it is agreed, that the British and French troops shall compleat, before the 15th of March next, all that shall remain to be executed of the XIIth and XIIIth articles of the preliminaries, figned the 3d day of November last, with regard to the evacuation to be made in the empire, or elsewhere. The island of Belleisle shall be evacuated fix weeks after the exchange of the ratifications of the prefent treaty, or sooner if it can be done. Guadaloupe, Desirade, Maria Galante, Martinico, and St. Lucia, three. months after the exchange of the ratifications of the present treaty. or sooner if it can be done. Great Britain shall likewise, at the end of three months after the exchange of the ratifications of the present treaty, or sooner if it can be done, enter into possession of the river and port of the Mobile, and of all that is to form the limits of the territory of Great Britain, on the fide of the river Missifippi, as they are specified in the VIIth article. The illand of Goree shall be evacuated by Great Britain, three months after the exchange of the ratifications of the present treaty; and the island of Minorca, by France, at the same epoch, or fooner if it can be done: and according to the VIth article, France

France shall likewise enter into posfestion of the oillands of St. Peters and of Miguelon, at the end of three months after the exchange of the ratifications of the prefent treaty. The factories in the Bast Indies shall be restored fix months after the exchange of the ratifications of the precent treaty, or fooner if it can be done. The fortress of the Havanna, with all that has been conquered in the island of Cuba, shall be reftored three months after the exchange of the ratifications of the present treaty, or sooner is it can be done? and, at the same time, Great Britain shall enter into posfemon of the country ceded by Spain, according to the XXth article. All the places and countries of his most Faithful majesty, in Europe, shall be reflored immediately after the exchange of the ratifications of the present treaty; and the Portuguese colonies, which may have been conquered, shall be restored in the space of three months in the West Indies, and of fix months in the East Indies, after the exchange of the ratifications of the prefent treaty or fooner if it can be done . All the fortreffes, the restitution whereof is stipulated above, shall be restored with the agaillery and ammunition, which were found there at the time of the conquett. In confequence whereof, the necessary orders shall be sent by each of the high contracting parthe hips that thall carry them, immediately after the exchange of the ratifications of the prefent treaty.

XXV. His Britannic majefty, as elector of Bruniwical unenbourg, 480 well for himself, ashformhis heirs and fuccessors, and all the dominions and possessions of his faid majefty in Germany, are included guarantied by the prefent treat

In witness whereof, We, ambasladors and ministers plenipotentiary of his Britannic majesty, and of his nost Faithful majesty, have figued the present act, and have caused the feal of our arms to be put thereto.

Done at Paris the roth of February, 1763.

(L.S.) BEDRORD, C. P. S. (L.S.) De MELLO & CASTRO.

Declaration of his most Faithful majest's ambassador and minister plenipotentiary, with regard to the alternating with Great Britain and France.

WHEREAS on the conclusion of the negotiation of the definitive treaty, figured at Paris the 10th day of February, a difficulty arcle as to the order of figuring,

which might have retarded the conclusion of the faid treaty. We the underwritten, ambassador and minister plenipotentiaty of his most Faithful majefty, declare, that the alternative observed, on the part of the king of Great Britain, and the most Christian king, with the most Faithful king, in the act of accelfion of the court of Portugal, was granted by their Britannic and most Christian majesties, solely with view to facilitate the conclusion of the definitive treaty, and by that means, the more speedily to confolidate fo important and so falutary a work; and that this complaifance of their Britannic and most Christian majesties shall not be made any precedent of for the future; the court of Portugal thall not alledge it as an example in their favour; thall derive therefrom no right, title, or pretention, for any cause, or under any pretence whatfoever.

In witness whereof, We, ambassador and minister plenipotentiary of his most Faithful majesty, duly authorized for this purpose, have signed the present declaration, and have caused the seal of our arms to

be put thereto.

Done at Paris the 10th of February, 1763.

MARTIN de MELLO & CASTRO.

(L. S.)

The following preliminary articles and declaration were omitted in the definitive treaty, as the articles were already complied with, and the peace then agreed upon between the empress queen and the king of Poland on the one hand, and the king of Prussia on the other, rendered the declaration indifferent.

XIII. After the ratification of the preliminaties, France shall evacuate, as foon as at can be done, the fortreffes of Cleves, Wefel, and Gueldres, and in general all the countries belonging to the king of Pruffia; and, at the fame time, the British and French armies shall evacuate all the countries which they occupy, in Westphalia, Lower Saxony, on the Lower Rhine, the Upper Rhine, and in all the empire; and each shall retire into the dominions of their respective sovereigns : and their Britannic and most Chriflian majesties further engage, and promife, not to furnish any succour, of any kind, to their respective allies, who shall continue engaged in the present war in Germany.

XIV. The towns of Oftend and Niesport shall be evacuated by his most Christian majesty's troops, immediately after the fignature of the

prefent preliminaries and yo

Declaration, figned at Fontainbleau, the 3d of November, 1762, by the French plenipotentiary.

clares, that in agreeing to the XIII in article of the preliminaries, figued this day, he does not mean to renounce the right of acquitting his debts to his allies; and that the remittances made on his part, in order to acquit the arrears that may be due on the subsidies of preceding years, are not to be considered as an infraction of the said article.

In witness whereof, I, the underwritten minister plenipotentiary of his most Christian majesty, have figned the present declaration, and have caused the seal of my arms to

empreis oueen of Hungary and I c

be putythereto, closing A isli

Done at Fontainbleau the 3dby of November, 1762. CHOISEUL, Duc de Prof. (L. S.)

The flipulations relative to be kirk and the East Indies, flood a follows in the preliminaries.

V. The town and port of Dakirk shall be put into the state in by the late treaty of Aix la Capelle, and by former treates: a cunette shall remain as it now a provided that the English engines named by his Britannic majet, and received at Dunkirk by one of his most Christian majesty, very that this cunette is only of use the wholesomeness of the air, in the health of the inhabitants.

X. In the East Indies, Great he tain shall restore to France the size ral comptoirs which that crown he on the coast of Coromandel, as we as on that of Malabar, and all in Bengal, at the commencement of hostilities between the two companies in the year 1749, in the condition in which they now are, or condition that his most Christian majesty renounces the acquisition which he has made on the coast of Coromandel, fince the said commencement of hostilities between the two companies in the year 1749.

And as to the limits of the English and French, and their India allies in these countries, they were not exactly marked out as they now are in the declaration annexed in the definitive treaty.

These, with his most Christian majesty's obliging himself, in the definitive treaty, to discharge the debas due by him to his Canadia subjects, form all the difference between said treaty and the prelimination.

THEREAS a definitive treaty of peace and friendship between , the most Christian king, e king of Spain, to which the ing of Portugal bath acceded, hath een concluded at Paris on the 10th ay of this instant March; in conormity thereunto, we have thought t hereby to command, that the me be published throughout all ur dominions : And we do deare to all our loving subjects our rill and pleasure, that the faid reaty of peace and friendship be blerved inviolably, as well by fea nd land, and in all places whatfover; strictly charging and comnanding all our loving subjects to ake notice hereof, and to conform hemselves thereunto accordingly.

Given at our court at St. James's, the 21st day of March, 1763, in the third year of our reign. GOD fave the KING.

be definitive treaty of peace between the empress queen and the king of Prussa, is in substance as follows.

ARTICLE INA

THERE shall be henceforth an inviolable and perpetual peace, and fincere union, and perfect friendship, between the Apostolic impress queen on the one part, and he king of Prussia on the other, heir heirs and successors.

II. There finall be on both fides in eternal oblivion, and a general annelty of all hostilities, tosses, dal mages, and wrongs, committed du-

ring the late troubles, by either party, of what nature foever; fo that there shall be no farther mens tion made of them, nor any com pensation demanded under any pretence, or upon any confideration whatfoever. The respective subjects of each power shall never be molefted upon that account, but shall fully enjoy this amnesty, and all its confequences, notwithfland. ing the avocatory letters which have been iffued and published All confifcations shall be entirely taken off; and fuch goods as have been conficated or fequefered, shall be restored to the proprietors, who were in possession of them before these last troubles. of linds ode tesil

III. Both parties renounce all claims on each other's dominions or territories (particularly the empress queen renounces all claim to those which were ceded to the king of Prussia by the preliminary articles of Breslau and the treaty of Berlin) and also all indemnification for damages suffered during the last war.

IV. All hostilities shall entirely cease on both fides, from the day of the figuature of the prefent treaty of peace. For this end the necessary orders shall be immediately difpatched to the armies and troops of the two high contracting parties, wherefoever they may be; and in cafe, through ignorance of what has been stipulated in this respect; any hostilities shall have been committed after the day of the fignature of the prefent treaty, they shall not be deemed to affect this treaty in any manner; and in this case, the men and effects, which may have been taken and carried away, shall be faithfully restored at

V. Her Apottolic majesty, other empress queen of Hungary and Bo-

hemia, shall withdraw her troops from all the countries and flates of Germany, which are not under her dominion, within the space of 21 days after the exchange of the ratifications of the prefent treaty; and within the fame term he shall cause to be entirely evacuated, and reflored to his majesty the king of Pruffia, the county of Glatz, and, in general, all the states, countries, towns, places, and fortreffes, which his Pruffian majefty possessed before the present war in Silefia, or elsewhere, and which have been occupied by the troops of her Apostolic majesty the empress queen of Hungary and Bohemia, or by those of her friends and allies, during the course of the present war. The fortreffes of Glatz, Wefel, and Gueldres, shall be restored to his Proffian majesty in the same state, with regard to the fortifications in which they were, and with the artillery that was found therein when they were taken. His majesty the king of Pruffia shall withdraw, with-- ju the fame space of 21 days after athe exchange of the ratifications of the present meaty, his troops from all the countries and flates of Germany, which are not under his doominion; and he shall evacuate and restore, on his fide, all the states, countries, towns, places, and fortreffes, of his majesty the king of Poland elector of Saxony, agreeably to the treaty of peace, which has been concluded this fame day fick and wounded immediately after hetween their majeflies the kings of their recovery. The To this purpole, Pruffia and Poland; fo that the re- each party shall name generals or flitution and evacuation of the pro- commissioners, who shall, immedvinces, towns, and fortreffes respectively occupied, shall be made heations, proceed, in the places that at one and the fame time.

be, as well as all demands of me cruits, pioneers, waggons, horie. and in general, the things furif. ed upon account of war, shall cale from the day of the fignature d the prefent treaty, and every thin that shall be exacted, taken, orn ceived, after this epoch, shall be reflored punctually and without de-

Each party shall renounce all n. rears whatfoever of contribution and deliveries. The bills of en change, or other written promile, which have been given on either fide respecting these matters, full be delared void and of none effect, and shall be restored gratis to those who gave them. The hoftage alfo, which have been taken or given, with regard to the fame, fhall be released without ransom: every thing above-mentioned shall take place immediately after theerchange of the ratifications of the prefent treaty: 184 100 4

VII. All prisoners of war shall be reciprocally and faithfully nstored, without ransom, and without regard to their number, or military rank, on their paying however previously the debts which they shall have contracted during their captivity. Each party shall mutually renounce what has been furnished or advanced to them for their affilance and maintenance; and the fame proceeding, in all respects, shall be observed with regard to the ately after the exchange of the mifhall be agreed upon, to the ex-VI. VIII. The subjects of either party forced to enter into the service of the other, shall be discharged.

IX. The empress queen thall return all the deeds, writings, and letters belonging to the places reflored to the king of Prussia.

X. The inhabitants of the county and city of Glatz shall be at liberty to remove with their effects, in two years, without paying any duty.

XI. The king of Prussia shall confirm the nomination made by the empress queen during the war to vacant benefices, and to places in the excise, in the duchies of Cleves and Gueldres.

XII. The preliminaries of Breslau, Jone 11, 1742, the treaty of Berlin, July 28, 1742, the recess of the limits of 1742, the treaty of Dresden, Dec. 28, 1745, where they are not derogated from by this treaty, are renewed and confirmed.

XIII. The two parties purpose to settle a treaty of commerce as soon as possible; and in the mean time will savour the commerce between their countries.

XIV. The Roman Catholic religion shall be preserved in Silesia, as by the treaty of Dresden, and all other privileges of the subjects. AV. The two contracting powers shall renew article IX. and the separate article of the treaty of Berlin, relative to the debts on Silesia.

XVI. The two powers mutually guaranty the whole of each other's dominions; those belonging to the emprels queen out of Germany excepted.

XVII. The king of Poland shall be comprehended in this treaty on the footing of his treaty of this day with the king of Prussia.

XVIII. The king of Pruffia will renew his convention with the elector Palatine in 1741, relative to Juliers and Bergue.

XIX. The whole empire is comprised in the stipulations of the IId. 1Vth, Vth, VIth, and VII articles. And by virtue thereof, all the princes and states shall fully enjoy the effects of the faid stipulations. And whatfoever is therein flipulated and agreed on between her majesty the empress queen of Hungary and Bohemia, and his majesty the king of Proffia, shall take place equally and reciprocally between their faid majesties and all the princes and slates of the empire! The peace of Westphalia, and all the other consitntions of the empire, are likewife confirmed by the present treaty of peace.

Papers relating to the conquest of

Articles of capitulation of the citadel of Fort Royal, in the illand of Martinico, the 4th of February, 1762.

ARTICLEI

THE commanding officer of the citadel shall march out at the head of the garrison, composed of troops

troops detached from the marine. the royal grenadiers, cannoniers, hombardier and Swife; the different detachments of the militia and freebooters, and the other volunteers; with the shenours of war, drums beating, lighted match, colours flying, two pieces of cannon, and three rounds of ammunition The troops of his most Christian majesty in garrison shall march out with drams beating, colours flying, and two pieces of cannon, two rounds of ammunition, and shall be embarked and sent to France as foon as possible, at the expence of his Britannic majesty. The militia, freebooters, and others belonging to the island, shall lay down their arms, and be prifoners of war, until the fate of it is determined.

II. The garrison shall be sent to the port of Rochfort in France, by the most short and expeditions way, at the expence, and in the ships of his Britannic majesty.—Answered in the first.

III. The faid garrison shall be lodged and maintained in the town of Fort Royal, till their departure, at the expence of his Britannic majesty. — They shall be maintained at the expence of his Britannic majesty, and shall be embarked as in the first article.

IV. That it shall be lawful for the officers, Creoles, and others, to go into the illand, and stay there as long as it shall be necessary to settle their affairs. A reasonable time will be allowed to the officers to settle their affairs; they behaving according to the rules of war.

V. That the officers and others, who have effects in the country, shall keep them. Granted 150 02

XV. That the English prisoners detained in this citadel shall be exchanged for ours. Among others, M de Capone, major of this citadel and ifland, shall be included in the exchange, to follow the fortune of the officers of the place. -- Re-

XVL That the effects of the officers and men belonging to the royal grenadiers, which were left upon Morne Garnier, shall be refored to them. ---- It cannot be complied with, as it will be impoffible to recover the m.

XVII. That the armed free Negroes and Mulastoes, that entered into the citadel as attendants on the companies of militia, shall go out likewise with the said companies. -They shall remain prisoners of war, until the face of the island is determinedabili Mirurut of .

XVIII. That three days shall be granted for the evacuation of the ace, at the end of which time, the gate shall be given up to the troops of his Britannic majesty, whilt the garrison shall march out. The gate of the fort shall be given up to the troops of his Britannic majesty this evening at five o'clock, and the French garrilon hall march out at nine to-morrow lightly to bury the dead with gainrom

XIX. That before the capitelation is lettled, the commanding officer of the place shall be permitted to communicate it to the general, and in the mean time there hall be a suspension of arms, and

both fides --- After the capitule tion is figned, and the gare of the fort pollefled by the British troops, the commandant shall be allowed to acquaint his general with its ootless?

ROBERT MONCTON DE LIGNERY. G. B. RODREY.

Capitulation demanded by the inbabitants of the island of Martinico. represented by Melf. D. Aleffo, knt. Seignior Defragny La Pierre, captain of borfe, and Ferrie, captain of infantry of militia, furnished with full powers from nine quarters of this island.

> To their excellencies Meffrs. Monckton and Rodney, generals by land and fea of his Britannic majesty.

ARTICLEL

HE inhabitants hall quit their posts with two field pieces, their arms, colours flying, drums beating, matches lighted, and shall have all the honours of war,-The inhabitants shall march out of all their garrisons and posts (none excepted) with their arms and colours flying, upon condition that they afterwards lay them down; and that all the forts, garrilons, posts, and batteries of cannon and mortars, with all arms, amminition, and implements of war, be delivered to proper persons appointed to receive themad Ila

II. The inhabitants of the islands of St. Lucia, and St. Vincent, who are come to the affiftance of this island, shall have the liberty to retire with their arms and baggage. and shall be furnished with a vessel to carry them to their own islands, that all the works shall cease on with their servants which they have

brought

brought with them, as also with province percentary for their voyage.

They must remain prisoners of war, as those of St. Vincent, in the capitalation of Port Royal.

III. The inhabitants shall have free exercise of their religion, the priests, triars, and nuns, shall be preserved in their cures and convents, and it shall be permitted to the superiors of the order, to fend for any of them from France, delivering their letter to his Britannic majesty's governors. — Granted.

IV. They shall be strictly neuter, and shall not be obliged to take arms against his most Christian majesty, nor even against any other power.—They become subjects of his Britannic majesty, and must take the oath of allegiance; but shall not be obliged to take arms against his most Christian majesty, until a peace may determine the state of the island.

V. They shall preserve their civil government, their laws, customs, and ordonnances; justice shall be administered by the same officers who are now in employment; and there shall be a regulation made for the interior police between the governor of his Britannic majesty and the inhabitants; and in case that at the peace the island should be ceded to the king of Great Britain, it shall be allowed to the inhabitants to preferve their political government, and to accept that of Antigua or St. Christopher's. ___ They become British subjects (as in the preceding article) but shall continue to be governed by their prefent laws, until his majeffy's pleasure be knowr.

VI. The inhabitants, as also the religious orders of both lexes, shall be maintained in the property of

their effects moveable and immore able, of what nature foever, in shall be preserved in their privilege, rights, honours, and exemptions, their free negroes and mulattoe shall have the entire enjoyment of their liberty.— Granted in regat to the religious orders: The inhabitants, being subjects of Granted in will enjoy their properties, and the same privileges as in the other his majesty's Leeward island.

VII. They shall not pay to his majesty any other duties than those which have been paid hitherto to his most Christian majesty; and the capitation of negroes on the same footing it is paid at present, without any other charges or imposs; and the experices of justice, penson to curates, and other occasional expences, shall be paid by the domin of his Britannic majesty, as they were by that of his most Christian majesty. — Answered in the 6th article in what regards the inhabitants.

VIII. and IX. The prisoners taken, during the fiege, shall be restored on both sides; the free mulattoes, as well as the negroes, which shall have been taken, shall be restored as prisoners of war, and shall not be treated as slaves.

The inhabitants and mulattoes, now prisoners, will become British subjects, upon the submission of the whole island, and will enjoy the benefit of it. The negroes which have been taken in arms are demed slaves.

XIII. The inhabitants shall have liberty of retiring; we say, of send-their children to France for their education; the wives of officers and others, out of the island, shall have liberty of retiring with their effects, and the number of servants suitable to their rank.—The liberty of sending their children to France to be educated, depends upon the king's pleasure. The rest granted.

XIV. The government shall procure for the inhabitants the vent of their commodities, which shall be looked upon as national commodities, and of consequence shall have entry in England.—Granted; the island producing nothing but what may be imported into England.

XV. The inhabitants shall not be obliged to find quarters for the troops, or to do any works on the fortifications. The inhabitants must furnish barracks or quarters

for the king's troops in the feveral

XVI. The widows and others, absent by sickness, who shall not have signed the capitulation, shall have a time fixed for doing it.—
Granted, on condition that they sign the capitulation in one month from this date.

where elfe.

XVIII. It shall be permitted to give freedom to negro and mulatto slaves, as a recompence for their good services, according to custom.

- Granted to fervants.

XIX. The inhabitants and merchants shall enjoy all their privileges of commerce, as the subjects of Great Britain.—Granted, so that it does not affect the privileges of particular companies established in England, or the laws of the kingdom, which prohibit the carrying on trade in other than British bottoms.

XX. It shall always be permitted to the inhabitants, to continue to make white and clayed sugar, as they have been used to.—Granted, they paying duty in proportion to their superior value to the common quality of the Massoyado sugar.

XXI. The sea vessels, as well ships as boats or schooners, which are sunk or assoat, and which have not been taken, shall remain to their owners.—Resuled to all privateers and ships, trading to distant ports. Granted to such as are employed in passing to and from the diff rent ports of the island.

Art. V. M. de Rochemore, infeetor of the fortifications, and arfillery in this island, shall, in like manner, be conveyed to the Granades, in the same ships with the persons in his retinue engaged in ervice of the king, their domestics, and their effects. Granted, to France.

Art. VI. There shall be made by two commissaries, who shall be named for that purpole, one of each nation, an exact inventory of all the effects, which shall be found to belong to his most Christian majesty in the arlenals, in the magazines, upon the batteries, and in general of all the arms, utenfils and ammunitions of war, to be delivered up to the commanding officer of his Britannic majesty Granted.

Art. VII. Merchandizes not being arms nor munitions of war, which may be found lodged in the and magazines, or upon the faid batteries, thall not be made a part of the faid inventory, unless it be a order to their being reftored to their true owners and All military fores, and orbers, employed as fuch, become his Britannic ma

the little return to France in the the during the fiege, or at lea, before

the fiege, of whatever nation and quality, fhall be reflored on either fide; and those made in the citadel. if they be troops, shall follow the fortune of the other troops; and, if inhabitants, they shall follow the fortune of the other inhabitants .-The troops, according to the cartel; the inhabitants will be released up-

on the figuing of this capitulation.

Art. IX. The free negroes and and mulattoes made prisoners of war, shall be treated as such, and restored like the other prisoners, in order to their continuing to enjoy their liberty. All negroes taken in arms are deemed flaves.

rest granted.

Art. X. The Sieur Nadau Dutreil, de la Potterie, and Cornette, priloners of state, shall be likewise conducted at the expence and in the ships, of his Britannic majesty, to the island of the Granades, to be delivered into the hands of M. le Vaffor Delatouche.-- Meffieurs de la Potterie, and Cornette, shall be delivered up when taken, but M. Nadau having had our promife (immediately upon his being made prisoner) to procure him a reasonable time to fettle his affairs, he bas three months from the date hereof for that purpose.

Art. XI. The illand of Martinico shall remain in the hands of his Britannic majesty, till such time as its condition shall have been determined, by treaty made between the two powers, without the inhabitants being compelled, in any cafe, to take up arms, either against the king of France, or against his allies, or even against any other power. They become subjects of shis Britannie majefty, and must take the oath of allegiance; but shall not be obliged to take up arms against his most

Christian majesty, until a peace may determine the fate of the ifland.

All the inhabitants of Martinico, either present or absent, even those that are engaged in his most Christian majesty's service, as well as all religious houses, and communities, thalf be maintained and preferved in the possession and propriety of their real and personal estates, of their negroes, shipping, and generally of all their effects, whether the faid real and personal estates, and effects, be actually in Martinico, or in any other island; and the flaves, which have been taken from them, during the fiege, shall be restored to them. The inhabitants as well as the religious orders, will enjoy their properties; and, as they become British subjects, they will enjoy the fame privileges as in his majesty's other Leeward islands. In regard to the slaves, answered in the 9th article.

Art. XIII. That boats or other veffels of Martinico, which are actually out at fea, or in neutral ports, whether they are equipped for war or not, shall be permitted to return into the ports and roads of this island, upon the declaration to be made by the owners thereof, of their intending to fend them immediate orders to return, and upon their giving personal security, that the faid veffels fhall make no attempt upon any English ship: in consideration of which declaration, paffports shall be granted them, that they may return in all fecurity. Refused, as foreign to the capitulation; but any applications, which may afterwards be made on effects which are dispersed in dethis head, shall be confidered at- vers parts of the island; and the cording to the rules of justice, and necessary time for the recovery of of war, thought the day of transfer to

Art. XIV. The inhabitants of Martinico shall freely and public ly exercise their religion; the priefts, friars, and nuns, shall be maintained in the public exercised their functions, and in the enjoy. ment of their privileges, prerogatives, and exemptions:-Granted.

Art. XV. The superior, as was as inferior judges, shall likewise be maintained in their functions, privileges, and prerogatives; they shall continue to administer justice to the inhabitants of this island, according to the laws, ordinance, customs, and uses which have been followed hitherto: no foreigner shall be allowed to fit in the cound as a judge. But if any place in the magistracy becomes vacant, the fuperior council of Martinico shall dispose of it provisionally only; and the person, chosen by them, shall perform the duties of it, till the one or the other of the two courts shall otherwise settle it, after that the condition of Martinico shall have been fixed, by a treaty between them .- They become British subjects, but shall continue to be governed by their present laws, until his majesty's pleasure be known.

Art. XVI. M. le Baron d'Huart, commanding the troops, and militia of this island, as well as M. de Bouran, major-general, shall be conveyed to the Granades, in the fame veffel, in which the royal grenadien are to be embarked, together with their domestics and effects, as well as those of all the officers of the fame corps. Art. XVII. All the land and sea officers, who find themselves in the island, either on actual duty, or with leave, shall have a year's time to settle all the affairs they may have there.—A proper time will be allowed to such as have estates upon the island, with the usual restrictions; and such as shall have M. Delatouche, the governor general, his leave.

Art. XVIII. The nobility shall continue to enjoy all the privileges, and exemptions, which have always been granted them.—Granted; so that it is not inconfishent with the British laws.

Art. XIX. The flaves that have been made free during the fiege, or to whom their freedom has been promifed, shall be reputed and declared free, and they shall peaceably enjoy their state of freedom.—Granted.

Art. XX. The duties of the polltax, those of importation and exportation, and in general all the duties established in this island, shall continue to be paid for the suture, on the same sooting as heretosore.—Answered in the 15th article.

Art. XXI. As it is suitable to the glory and interest of every prince whatsover to make it publickly known, that he honours with a special protection, all that bears the character of zeal, love, and loyalty Vol. V.

for its king, it has been agreed, that the things furnished to the colony on occasion of the fare, before or during the same, e, either provisions, utenfils, ammunition, arms, or money, shall continue to be confidered as debts of the colony, just as they were, and ought to be, in its former state; consequently, that the amounts of these supplies shall not cease to be reputed as debts of the colony itself, and which it must fatisfy, into whatsoever hands it may pass, through the fortune of arms; that confidering the nature and quality of these debts, it is of his Britannic majesty's dignity to grant them all manner of protection; consequently, that they shall be paid out of the first funds that shall arise, as well from the poll-tax, as from the duties of importation and exportation on merchandizes To which that are liable to them. purpose, the state of these debts shall be settled, and verified by M. Delareviere, intendant of the American Leeward islands. - Will be fettled by the generals on both fides, being foreign to the capitulation.

Art. XXII. In virtue of the same principle, and confidering the neceffity of speedily bringing provisions into this colony, it has likewife been agreed on, that such merchants of the town of St. Pierre, as by orders from the intendant M. Delareviere, have entered into measures and engagements, to bring over hither provisions from the neutral islands, shall be permitted to fulfil their engagements, as well to fave them from the damage they would fuffer by it, as to procure to this island a more speedy supply: confequently, two months shall be granted them, from the day of figning

thele presents, to compleat their un-dertakings. But to avoid all abuses in this relieft, M. Delareviere shall give a note of the nature and quantity of provisions, which he had ordeted to be procured from the neu-trals: and as he had promifed and granted an exemption of all duties on this importation, the faid exemption shall take place in the same manner as it was promifed, and as it is actually practifed; being a profit in which the colony and the merchant have both their share .-All supplies whatever, that were fland by any neutral power, for the support of his most Christian ma-jetty's troops, and colony, will be deemed legal prize, if taken by his Britannic majesty's ships; and all engagements with neutral powers for such a supply, made before the reduction of the island, being void, no commerce for the future can be carried on but in British bottoms.

Art. XXIII. M. le Vallor Dela-ouche shall be allowed five of the inhabitants, whom he shall cause to be put on board such of the vessels as are to transport his most Christian majesty's troops. His reasons for this demand, are, that it imports all the powers not to grant any protection to any one who breaks through the allegiance and fidelity a sub-ject owes to his king.—— Cannot be allowed, as we have already

granted them his Britannic ma-jefty's protection.

Act. XXIV. M. Delareviere, in-tendant, and M. Guignard, com-millary comptroller of the marine, in this island, shall be allowed time sufficient to settle all the parts of their respective administration, and to do whatever is absolutely necesary in that respect. A ship, with

provisions, shall afterwards be for nished, at the expence of his Br tannic majesty, in order to convey to the Granades the faid intendant. his wife, children, fecretaries, and fervants, with all their effects : the faid commissary comptroller of the marine shall go on board the fame ship, and shall be conveyed to the fame ifland .- Granted ; afterwards to be fent to France.

Art. XXV. The perfons em. ployed in the administration of the domaine of the marine, the clasfes and the finances of this island, who shall be willing to return to France, shall be transported thither, with their effects, in the vessels, and at the charge of his Britannic ma-

jesty. Granted.

Art. XXVI. The public records mall be again forthwith deposited in their proper places, and the governor for his Britannic majefly shall grant all protection in this respect .- They must be delivered to fuch persons as the general shall appoint to receive them.

Art. XXVII. With regard to any papers of accounts, they shall be again put into the hands of the proper accomptants, that they may be enabled to proceed to the rendering of their accounts, and to vouch them by fuch pieces as are necessary for their discharge. -Granted.

Art. XXVIII. The inhabitants, merchants, and other private perfons, resident or not, shall have leave to go to St. Domingo or Louisana, with their negroes and effects fo carrel thips, at their own ex-

Art. XXIX. If any of the grenadier foldiers firall have a mind to remain in the Mand, or to make their escape, a protection and guard 13

all be granted to prevent their deferting, and what remains of the aid grenadiers shall be embarked compleat, Granted, except in

V. That as by mere accident were refiding in this city his excellency the count de Superunda, lieut. gen. of his Catholic majefty's forces, and late viceroy of Peru, and Don Diego Tavares, major-general of his majesty's forces, and late governor of Carthagena, both here in their return to Spain : these gentlemen and their families shall be comprehended in this capitulation, allowing them to possess their equipages, and other effects belonging to them; and to grant them veffels to transport them to Spain. The count Superunda, lieut. gen. of his Catholic majesty's forces, and late viceroy of the kingdom of Peru, and Don Diego Tavares, knight of the order of St. James, major general, and late governor of Carthagena, shall be conveyed to Old Spain in the most commodious ships that can be provided, suitable to the rank, dignity, and character of those noble persons, with all their effects, money, and attendants, at fuch time as may be most convenient to them felves.

VI. That the Catholic Apostolic Roman religion shall be maintained and preserved in the same manner and form as it has hitherto been in all the dominions belonging to his Catholic majesty, without putting the least restraint to any of their public worships; and the different orders, universities, and colleges, shall remain in the full enjoyment of all their rights, in the same manner as they have hitherto enjoyed.

VII. That the bishop of Cuba is to enjoy all the privileges and prerogatives that as such belong to him, with the nomination of curates, and other ecclesiastical ministers, with the annexed jurisdiction over them, as he has had hitherto, with the freedom to receive all the rents and revenues within his bishopric; which privileges shall extend likewise to all other ecclesiastics in those shares belonging to them.—Granted, with a reserve, that in the appointment of priests, and other ecclesiastical officers, it shall be with the approbation of the British governor.

VIII. That within the monafteries of religious men and women, shall be observed and kept the same interior government as hitherto, without any novelty or variation.—Granted.

IX. That in the same manner as the effects and monies in this city, belonging to his Catholic majesty, is to be shipped on board of the squadron in this harbour, to transport the fame to Spain, all the tobacco which likewife belongs to his Catholic majesty. And it shall be permitted, even in time of war, to his Catholic majesty, to purchase tobacco on the faid island, in the district subject to the king of Great Britain, at the established prices, and the free exportation of the same to Spain in Spanish or foreign vessels; and for which purpole, and receiv-ing and keeping, and curing the fame, shall be kept, and possessed the ware-houses, with all other buildings, which are destined for that purpole; and likewife shall be allowed and maintained here, such officers as should be necessary

to manage the fame.—Refused.

X. That in confideration that this port is fituated by nature for the relief of those who navigate in [S] 3 those

those parts of Spanish and British America, that this port shall be repated and allowed to be neutral to the fublects of his Catholic majefty. who are to be admitted in and out freely, to take in such refreshments as they may be in need of, as well as repairing their veffels, paying the current prices for every thing, and that they are not to be infulted nor interrupted in their navigation by any veffels belonging to his Britanthic majesty, or his subjects or allies, from the Capes Catoche, on the coast of Campeche, and that of St. Antonio, to the westward of this island; nor from the Tortuga bank to this port; and from here till they get into the latitude of 33 degrees North, fill both their majesties agree to the contrary. -- Refused. XI. That all the inhabitants. Europeans, and Creoles in this city,

Europeans, and Creoles in this city, shall be left in the free possession and management of all their offices and employments which they have by purchase, as well as of their estates, and all other effects whatever, without being obliged to account on any other terms than those on which they did to his Catholic majesty.

Granted. And they shall be allowed to continue in their offices of property as long as they conduct themselves properly.

AII. That the faid offices shall preserve and keep the rights and privileges which they have hitherto enjoyed, and they shall be governed in his Britannic majesty's name, under the same laws and administration of justice; and under such conditions as they have done hitherto in the dominion of Spain, in every particular, appointing their judges and officers of justice agreeable to their usual custom. Granted.

XIII. That to any of the aford faid inhabitants of this city win should not chuse to flay, it shall be permitted them to take out the property and riches in fuch fpece as should be most convenient in them, and to dispose of their estates or to leave them under the adminifirstion of others, and to transport themselves with them, to such of his Catholic majeffy's dominion as they should chuse, granting them four years to execute the fame and veffels to transport them, either upon purchafe, or on freight with the necessary passports, and authority to bear arms against the Moors and Turks, upon this ex prefs condition, that they shall not use them against his Britannic ma jefty's fubjects, or his allies, who are not to infult them, nor abandor them; and that this and the two foregoing articles, are to comprehend and admit to be included all his Catholic majefty's minifters and officers, as well civil; as marine and military, who are married and els blifhed with families and effates in this city, in order that they may obtain the fame privileges as the other inhabitants. The inhabit tants will be allowed to dispose of and remove their effects to any part of the king of Spain's dominions in veffels at their own expence, for which they will have proper pall ports. It is understood that focu officers as have property in this ifland, shall have the same indub. gence allowed to the rest of the inhabitants, to noisudiralih bas con

XV. That the effects detained in this city, belonging to the merchants at Cadiz, which have arrived here in the different register ships, and in which are interested all the European nations, a sufficient passport shall be granted to the supercargoes thereof, that they may freely remit the same with the register ships, without running the sister ships, without running the sister ships, without running the sister.—Refused.

XVI. That those civil, or other officers, who have had charge of the management of the administration and distribution of the royal treasure, or any other affair of a peculial nature from his Cathour majesty, they are to be lest wish the free use of all those papers which concern the discharge of their

duty, with free liberty to carry them to Spain for that purpose: and the same shall be understood with the managers of the royal company established in this city.—All public papers to be delivered to the secretaries of the admiral and general for inspection, which will be returned to his Catholic majesty's officers, if not found necessary for the government of the island.

XVII. That the public records are to remain in custody of those officers who possess them, without permitting any of the papers to be taken away, for sear of their being mislaid.—Answered in the foregoing article.

XVIII. That the officers and foldiers who are fick in the hospital. shall be treated in the same manner as the garrison, and after their recovery they shall be granted horses or vessels to transport themselves where the reft of the garrison goes. with every thing necessary for their fecurity and sublistence during their voyage; and before which they shall be provided with such provisions and medicines as shall be demanded by the hospital keepers and surgeons thereof; and all others under them, who are included in this capitulation, are to flay or go as they shall prefer. Granted. The governor leaving proper commissaries to furnish them with provisions, furgeons, medicines, and necessaries, at the expence of his Catholic majesty, while they remain in the hospital. c bas der the lame laws

XIX. That all the prisoners made on both sides, since the 6th of June, when the English squadron appeared before this harbour, shall be required reciprocally, and without any ransow, within the term of two

months, for those who were sent away from the city to other towns in this island, which was done for want of proper places of security here, or before, if they can arrive.

This article cannot be concluded upon, till the British priso-

ners are delivered up.

XX. That as foon as the articles of this capitulation are agreed upon, and hostages given on each fide for the performance thereof, the Land Gate shall be delivered into the possession of his Britannic majefty's troops, that they may post a guard there; and the garrison shall have one themselves, until the place is evacuated, when the earl of Albemarle will be pleased to send some foldiers as a fafe-guard to the churches, convents, and treasuries, and all other places of consequence. -The number of fafe-guards required for the fecurity of the churches, convents, and The reft places, shall be granted. of the article is answered in the preliminary article.

XXI. That it shall be allowed to the governor and commander in chief of this squadron, to dispatch a packet-boat with advice to his Catholic majesty, as well as to other people who have a right to the same advice, to which vessel there shall be granted a safe and secure passport for the voyage.

As the troops are to be sent to Old Spain, a packet is unnecessary.

XXII. That the troops of the Punta castle shall have the same honours as the garrison of the town, and that they shall march out by one of the most practicable breaches.

Granted

XXIII. That the capitulation is to be understood literally, and without any interpretation on any pretext whatever, of making reprise on account of not having complied with the foregoing.

ALBEMARLE. G. POCOCK,
'E. Marq. del REAL TRANSPORTE.

JUAN DE PRADO.

Head-quarters near the Havannah, 12th August 1762.

Papers relating to the recovery of St. John's in Newfoundland, from the French.

Colonel Amberst's Summons to the governor of St. John's fort.

SIR, Sept. 16, 1762.

Humanity directs me to acquaint you of my firm intentions.

I know the miserable state your garrison is left in, and am fully informed of your design of blowing up the fort on quitting it; but have a care; for I have taken measure effectually to cut off your retreat; and so sure as a match is put to the train, every man of the garrison shall be put to the sword.

I must have immediate possession of the fort, in the state it now is, or expect the consequences.

I give you half an hour to think of it. I have the honour to be, iii, your most obedient humble servant, WM. AMHERST.

To the officer commanding at St. John's.

Letter from the count d'Hauffevoille to lieut. col. Amberst; dated at St. John's, Sept. 16, 1762.

WITH regard to the conduct that I shall hold, you may, fir, be misinformed. I wait for your troops and your cannon; and nothing

UNDER the uncertainty of the fuccours which I may receive either from France or its allies, and the fort being entire, and in a condition for a long defence, I am refolved to defend myself to the last extremity. The capitulation which they may think proper to grant me will determine me to surrender the place to you, in order to prevent the effusion of blood of the men who defend it.

Whatever resolution you come to, there is one left to me, which would hurt the interests of the sovereign you serve. I have the honour to be, sir, your most obedient humble servant, Count D'HAUSSONVILLE.

Fort St. John's, Sept. 18, 1762.

SIR, Camp before St. John's, SIR, Sept. 18, 1762.

I Have just had the honour of your letter. His Britannic majesty's seet and army co-operating here, will not give any other terms to the garrison of St. John's than their surrendering prisoners of war.

I don't thirst after the blood of the garrison; but you must determine quickly, or expect the consequences; for this is my final determination. I am, fir, your most obedient humble servant,

WM. AMHERST.
To count d'Hauffonville.

Letter from count d'Haussonwille to col. Amberst, dated at St. John's, Sept. 18, 1762.

I Have received, fir, your letter, which you did me the honour to write to me.

I am as averse as you to the effufion of blood. I consent to surrender the fort in a good condition, as I have already acquainted you, if the demands, which I enclose herewith, are granted to my troops. I have the honour to be, sir, your most humble and most obedient servant,

Le compte D'HAUSSONVILLE.

ARTICLES of CAPITULATION.

Demands of the garrison of St. John, and, in general, of the troops that are in it.

The French troops shall surrender prisoners of war.—Agreed to.

The officers and subaltern officers shall keep their arms to preserve good order among their troops.—
Agreed to.

Good ships shall be granted to carry the officers, grenadiers, and private men, either wounded, or not, to France, in the space of one month, on the coast of Brittany.—Agreed to. Lord Colville will, of course, embark them as soon as he possibly can.

The goods and effects of both the officers and foldiers shall be preferved. — His Britannic majesty's troops never pillage.

The gate will be taken possession of this afternoon, and the garrison will lay down their arms.

A cout any interpretation on any pre-

12661

This is to be figned by Lord Colville, but will remain at present, as afterwards, in full force.

WM. AMHERST. Signed, Le compte D'HAUSSONVILLE.

Camp before St. John's, Sept. 18, 1762.

The French troops that ferred in Cana, being defirous of ereding a monument in bonour of Montealm their general, who fell in the SIR, action at Quebec, when we also TT is a lost the brave Wolfe, a French colonel aurote to the academy of Belles Lettres for an epitaph, 10 be placed over Montcalm's tomb, in a church in that city; which occasioned the following letter from M. De Bougainville, member of the academy, to Mr. Pitt. mane per quadriconium figitige

THE honours paid, under your ministry, to Mr. Wolfe, assure me, that you will not disapprove of the grateful endeavours of the French troops, to perpetuate the memory of the marquis de Mont-The body of this general, who was honoured by the regret of your nation, is interred in Quebec. I have the honger to fend you an epitaph made for him by the academy of inscriptions; I beg the favour of you, fir, that you will be pleased to examine it, and, if not improper, obtain leave for me to fend it to Quebec, engraved on marble, and to be placed on the marquis de Montcalm's tombilid Should fuch leave be granted, may I prefume, fir, that you will be to good as to inform me of it, and, at the fame time, to fend the a paffport, that the marble, with the epitaph enan English ship, and Mr. Murray,

governor of Quebec, allow it to W placed in the Urfuline church. You will be pleased, fir, to pardon me for this intrusion on your important occupations; but endeavouring to immortalize illustrious men and eminent patriots, is doing honour to yourfelf.

I am with respect, &c. DE BOUGAINVILLE

CHARACTERS.

THE illustrious person, Some particulars of whose life are the subed of the following piece, was the fon f that famous duke of Orleans, whose character is too well known to need any delineation, and too profligate to furnish any example. The son was in every thing, but parts and genius, the very reverse of that father; and applied his great abilities of mind and fortune as faithfully to their proper purposes, as the father had perverted bis from that rational end, for which providence has designed such important gifts. It is hard to conceive a more amiable picture than that of So great a Prince, employed in the pursuit of knowledge and the exercise of piety; and devoting all his time, influence, and fortune, to the bonour of his Maker, and the good of his fellow creatures; rewarding merit and relieving indigence. With whatever peculiarities his religion, country, or conftitution may have tinged bis character, they will not detract from his example; nor diminish bis merit in the eyes of those, who in human beings consider only the great outline and general tenor of their actions, who judge of religion only by its fincerity, and of wirtue by its efficacy.

d,

The life of Louis, late Duke of Or-

Louis D'Orleans Duke of Orleans, first prince of the blood toyal of France, and one of the most Pious and most learned princes that Vol. V.

ever lived, was born at Versailles, on the 4th of August, 1703. He was fon of Philip, duke of Orleans, afterwards Regent, and of Mary Frances, of Bourbon. He discovered in his very childhood a reverence for religion; a shining genius and enlarged understanding. He was particularly fond of natural philofophy and natural history; but those, who had the management of his education, were often obliged to restrain and interrupt his studies, on account of the weakness of his constitution, and the frequent indispofitions to which he was subject. At the time his father became regent of France, he made his first appearance at court. After the death of that prince, he married, in 1724. Augusta Maria, of Baden, a princess eminent for her fine qualities, and truly worthy of him. This il-Justrious couple lived together in the tenderest union, but it was focn unhappily interrupted by death : for the princess died in the year 1726. She was lamented by all ranks of people.

A death fo premature, joined with the reflections which the duke of Orleans had already made on that of the regent, made him fully femble of the vanity of titles, preheminence and earthly enjoyments. He immediately proposed to himself a new plan of life, which he afterwards pursued, dividing his time between the duties peculiar to his rank, the exercises of a christian,

and the study of religion and the sciences. About the year 1730, he took, in the abbey of St. Genevieve, an apartment, small, retired, and inconvenient. He was near the two churches of St. Genevieve and the Mount; wherein he had galleries. This apartment was contiguous to the house of God, which alone was fufficient to make the duke prefer it to the finest palace. He at first retired to it only at the solemn festivals : but resided in it more frequently after the year 1735, and when he left the court in 1742, took up his constant abode there, and went no more to his palace, except to attend the council, from which he feldom absented himfelf.

After his conversion (for so he called this change of life which began in 1726) he practifed the greatest austerities. He slept on a rough straw bed, rose at four o'clock every morning, fpent feveral hours in prayer, drank nothing but water, fasted rigorously, deprived himself almost constantly of fire, even in the most inclement season; austerities thefe, especially that of taking no wine, which he faid fometimes had cost him a great deal of pains. He poured water often into his cup under a pretence to cool it, but indeed thro' a principle of mortification. His apparel was plain and neat. His furniture and his table were not at all splendid. He was in every thing a pattern of felf-denial and piety. He loved to mingle in our churches among the common people. He reverenced the external rites of religion. He attended divine fervice regularly, spent five or fix hours at church every funday, and holiday; and continued fo to do even in his last fickness, receiving the communion, and often attending those who administered it to the fick. He has been seen many time during the Easter week, althout troubled with the gout, going up the fourth or fifth story, after the minister of the parish who went a administer the sacrament to por

fick people.

Filled with the spirit of prayer, he was fometimes furprized in the innermost recesses of his apartment, proftrate on the ground and groaning most bitterly. But these devout exercises never made the duke forget the duties of his station. He was alfiduous several years at the king's councils, but his indispositions and other reasons, made him determine entirely to quit the court During his receis, however, held nothing of his tender attachmen and profound respect for the king. It is well known with what concen he heard of his fickness at Metz. When the news was brought him, he shed tears, and hastened to Metz inmediately. Perhaps it is to the constancy and fervency of this prince, that France is indebted for the prefervation of her king. He was often heard to fay : " The king i our master; we are his subjects, and we owe him respect and obedience." The duke of Orleans full of veneration for the piety of the queen, called it " a piety of the understanding and of the heart." He expressed the greatest joy at the birth of the Dauphin, and he spoke with great complacency of the virtue of the prince, which he faid " de clared beforehand the happiness our grand-children." He was conflant in his love to her royal high ness the duchess of Orleans his mo ther, who died in 1749, and always shewed the greatest paternal tender

ness to his son, the present duke of Orleans. He delighted to hear him spoke of, and it was easy to perceive the joy he felt when the conversation turned on the eminent qualities of this prince, and on the prowess he shewed in the army-

But what must render the memory of the duke ever dear to France, was a most extensive charity and an enlightened zeal for the public good, and the interests of religion. The indigent, of every age, fex, and condition, were certain to receive relief from him. He heard their complaints every day in one of the halls of the convent of St. Genevieve, he fympathized with them, he alleviated their distresses; when it was not in his power to dismiss them entirely fatisfied, one might fee that his heart granted them what necessity obliged him to refuse. It is hardly to be imagined what fums this pious prince expended in placing children for education in colleges and nunneries, in portioning young women, endowing nuns, putting boys apprentices or purchasing for them their freedoms, fetting unfortunate tradefmen up in bufiness again, and preventing the ruin of others, maintaining officers in the service, or granting affistance to their widows and children, refloring and supporting noblemens families, relieving the fick and paying furgeons for their attendance on them. The wounds of fome he examined himself, and other poor men he fought himself in the chambers and garrets, attended by only one fervant.

The overflowing of the Loire in 1733, having done confiderable damage to the country of Orleans, the duke faved, by the immediate relief he afforded them, a number of

families who were perishing; he supplied them with seed for their land; in 1739 and 1740, he set no bounds to his beneficence. On being told that the austerities he practised, would impair his health, he would answer with a smile, "It is so much saved for the poor, whom he termed the courtiers of the Lord, and added, he would not serve his body at the expence of his soul."

His great mind embraced the needy of all countries. He relieved the poor catholics of Berlin, and of all Silefia, as well as those of the Indies and America. He fent miffionaries to the remotest parts of the world. He founded charity schools, and communities of men and women in feveral places, a college at Versailles, a professorship of divinity in the Sorbonne, to explain the original text of the facred scriptures; he rebuilt colleges and feminaries. At Orleans he established hospitals for lying-in women. He employed many skilful surgeons in the service of the poor. He made great improvements in physic, agriculture, arts, and manufactures. He purchased, and made public, a variety of useful remedies. His gardens were filled with medicinal plants of all forts, brought from the most distant climates.

Nor did his charitable offices obflruct his progress in literature. He
applied himself to the study of the
writings of St. Thomas, of Estius,
of the most excellent religious treatises, of the fathers of the church
and the best ecclesiastical writers, of
the Hebrews, Chaldee, Syriac, and
Greek tongues, to convince himself
more and more of the sundamental
principles of his faith; the oeconomy of religion had struck him to
such a degree, that he was ever sirm

B 2

in the faith, and often faid, " that the perufal of impious treatifes neyer excited in him the least doubt of the truth of the christian mysteries, and that the belief of these mysteries never disturbed his mind." He also devoted some of his time to the fludy of history, geography, botany, chemistry, natural history, philofophy, and painting, all useful sciences; the progress he made in literature is scarce to be credited. In the feven or eight last years of his life, he could repeat without book the texts of scripture, with the differences between the Hebrew, the Greek, and the Vulgate. He understood the Greek as well as the Latin fathers. He could translate, with eafe, the dialogues of Plato and other prophane authors. Some, who heretofore would never believe the dake had attained fo much knowledge, can now testify the aruth of what we have advanced. It must be confidered that he had a quick and piercing genius, and that during the space of twenty-five years he fludied many hours every day, chose the best masters in every kind of learning, and conversed with the learned of every country on fuch subjects as were most familiar to He honoured them all with his protection, encouraged them by his favours, and always preferred those whose enquiries tended to the advancement of virtue and the public good. He gave the Abbe Francis a pension, which he has continued in the codicil of his will, explaining thus the motives for fo doing: being willing, fays he, to encourage the Abbé Francis, to whom the public are under great obliga- person, nor would he suffer other tions for a modern work upon the to do it in his presence. En proofs of our religion; and being equitable, even at the expence of willing to enable him to continue his own interest, he thanked a pri-

his fo uleful labours, I give and be queath to the faid Abbé Francis an annuity of 1500 livres." Those, who excelled in nothing but the belles lettres and in poetry, had feldom access to this prince. An ene my to praise, he feared they might again revive the tafte he had for French poetry; for fometimes he had made verses, and received no fmall praise for them. The Abbe l'Advocat (to whom we are principally indebted for this account) tells us he has feen pieces of his compofition, which, the' elegant and pretty, the duke afterwards threw into the fire. Senfible of the importance of time, he took care to inprove every minute. When artifu or learned men waited on him, they were admitted into his presence immediately; and if he appointed themlto attend at a certain hour, and other bufiness would not permit him to fee them, he fent his fervant to let them know it, and fave them the trouble of waiting.

The delight he found in piety and devotion he used thus to express: "I know by experience that sublunary grandeur and sublunary pleasure are delusive and vain, and are always infinitely below the conceptions we form of them; but, on the contrary, such happiness and such complacency may be found in devotion and piety, as the sensual mind has no idea of." His piety was real and solid. "Zeal, he would say, must be enlightened. Zeal and prudence ought ever to go hand in hand."

The duke, being once follicited by a nobleman to discard one of his officers from his service, because he was dissolute in his conduct, and would fometimes inveigh against religion, answered him with spirit: "Learn, fir, that the king ought not to deprive the flate of an excellent officer, because his morals are not so good as could be wished, and he has not so great a veneration for religion as one could defire. Immorality and vice should be difcouraged as much as possible, but his majesty must not, for things foreign to the fervice, deprive officers of their employments."

His intense application to study and his severe abstinence at last occasioned a long and painful illness. The news of which being spread abroad threw all France into consternation. The church of St. Genevieve was filled with people of all forts, who offered up fervent prayers for the restoration of his health. The duke foresaw and waited for death with the greatest

fortitude and composure: he spoke of it, as of the demise of another person, to those about him; and in his last will he expatiates in the most pathetic manner, on his belief in the resurrection. Notwithstanding his ill-health, no body could perfuade him to fleep more than he was used to do; when any one represented that it was absolutely neceffary, and that he should change his straw bed for a softer one, he seplied, " Phyficians have no concern for the foul, they only care for the body. When a man draws near his diffolution, his zeal should increase. 'Tis in the arms of selfdenial, that a true christian is to die: I have always made it a part of my penitence to fit in an uneafy posture: I am resolved to persist in it to my latest moment, for I have practifed mortification In his will he expresses enough." himself much in the same manner. In his last moments, he was folely intent on God, nor did he cease to implore his bleffing for the duke of Chartres. " I have a fon, (faid he to the minister who attended him,) whom I am going to commend to the all-perfect Being; I entreat God that his natural virtues may become Christian graces; that the qualities which gain him efteem', may be serviceable to his falvation; that his love for the king, and his love for me, may be the bloffoms of that immortal charity, which the holy Spirits and bleffed Angels enjoy."

The duke was steady to the plan he had prescribed for upwards of twenty years: He was ever anxious for the propagation of religion, and for the public good. He died on the 4th of February, 1752, aged forty-eight years and six mouths,

B 3 belove

beloved by good people of all forts, lamented by the poor, the fick, the

unhappy.

He left behind a great number of writings; the chief of which are, i. A translation and comment on some part of the old Testament. 2. A literal version of the Psalms, from the original Hebrew, with notes and a paraphrase. work is the most compleat, which our pious and learned prince has left; in his last illness he was employed in it, and finished it but a few days before his death: It is full of great erudition and found criticism; it contains a number of very curious and useful remarks: In one place he proves clearly, that the Greek annotations on the Pfalms, which are found in the Catena of father Cordiers, and go under the name of Theodorus of Heraclea, are of Theodorus of Mopfuest: a discovery which this learned prince first made, and which we must attribute to his deep penetra-3. Several differtations against the Jews, to serve as a refutation of the famous Hebrew book, entitled Kifouch Emouna; i. e. The Buckler of Faith. The duke of Orleans, not fatisfied with Gouffet's refutation of this book, undertook to answer it himself, but did not live to compleat the defign. His manuscript, though incompleat, is far superior to Gous-He has examined and refuted the objections of the Jews. 4. A literal translation of the Epiftles of St. Paul from the Greek, with a paraphrafe, annotations, and useful remarks. and useful remarks. 5. A treatise against theatrical exhibitions. 6. A folid refutation of the large French work, entitled the Hexaples. 7. Several other treatiles and curious differtations upon divers fabjects. His modesty would never
suffer him to publish any of he
writings: he bequeathed then,
with his library, to the order of
Dominican Friars, and by his will,
lest that order full liberty to add,
retrench, suppress, or even employ
his writings, as materials in the
composition of such works as they
might undertake upon the same
subjects. For the writings of &
Thomas he had a particular esteen,
and this esteem he testisses, even in
his last will.

One might eafily fill a large wolume with a detail of his royal highnefs's piety, his learning, his charity, and benevolence. It must be
observed, however, that what is related in this account is not collected
from popular reports. The gentleman, from whom this is taken,
was admitted often into his company, from the time of his retirement to his death; and had ocular
proof of many things here men-

tioned.

Memoirs of the life, &cc. of the late Dr. Benjamin Hoadley, lord bifting of Winchester.

THIS worthy and illustrious prelate was born in the year 1676.

I shall pass over the earlier and more private part of his life, and wilingly hasten to that time when the powers of his understanding began to unfold themselves, and to shine forth in the republic of letters.

His first preferment in the church, was the rectory of St. Peter le Poor, and the lectureship of St. Mildre's in the Poultry. In the year 1700, he published some remarks on the late bishop Atterbury's sermon a

hope,

he funeral of Mr. Bennet, in which Dr. Atterbury had, in the opinion of Mr. Hoadley, laid down fome dangerous propositions. Two years after, Mr. Hoadley again entered the lifts against this formidable aptagonift; and in his exceptions against a fermon published by Dr. Atterbury, intitled -" The Power of Charity to cover Sin"-he attacked the doctor with his usual strength of reasoning, and dispassionate enquiry, confuted his erroneous opinions without anger, and conquered him without triumph. This, indeed, is allowed by all to be his diftinguishing characteristic, - that in all the controversies which he held with his brethren (and no one, furely, held more) he ever preserved an equanimity of temper—the meek and candid christian never lost in the disputer of this world—cool, calm, and composed, he forgets the man, whilst he is animadverting on the writer, never betrayed into any asperity of expression-any railing acculations, any perfonal reflections, any misbecoming flights, or those fallies of paffion, which, as they give no firength to a bad argument, never add any grace or advantage to a good one. Happy would it be for the cause of religion and truth, if all (who engage in controverly) would imitate this pattern, and guard against virulence of expresfion, which, as it cannot tend to elucidate, fo neither hath it any connection with, literary controverfies-least of all in religious difputes, when the wrath of man cannot be supposed to work the righteoutness of God. The reader, I hope, will pardon this small digreffion, which I was naturally led into, and which is in itself an interesting late bishop & erbury's setting

In 1700, a dispute arose between these two learned combatants, concerning the doctrine of non-refiftance, occasioned by a performance of Mr. Hoadley, intitled - The Measures of Obedience; some positions in which, Dr. Atterbury endeavoured to confute in his elegant Latin fermon, preached that year before the London clergy. In this Mr. Hoadley fignalized debate, himself in so eminent a degree, that the honourable house of commons gave him a particular mark of their regard, by representing, in an address to the queen, the fignal services he had done to the cause of

civil and religious liberty.

The principles, however, which he espoused, being repugnant to the general temper of those times, drew on him the virulence of a party; yet it was at this period [1710] (when, as he himself exprest, it, fury seemed to be let loose upon bim) that the late Mrs. Howland prefented him to the rectory of Streatham, in Surry, which (as he expresses it in the last debt of gratitude that he paid to her memory, May 1719) was a more diflinguishing mark of her regard, in that she presented it to him unasked, -unapplied to, without his either having feen her, or been feen by her: To shew that, in her own expression, (fays he) the was neither ashamed nor afraid to give me that public, mark of her regard, at that critical time.

Soon after the accession of king George I. Dr. Hoadley was confecrated to the fee of Bangor; and in 1717, having broached some opinions concerning the nature of Christ's kingdom, &c. he again became the object of popular clamour, and was in a more particular man-

ner exposed to the rage of his brethren. At this juncture he was distinguished by another particular mark of the royal regards, by means of which the convocation was successively prorogued, and it was not permitted to sit, nor do any business, till that resentment was intirely subsided.

In 1721, he was translated to Hereford, and from thence, in 1723,

to Salifbury.

Y1 31 -

When the posthumous works of Dr. Samuel Clarke were published in 1732, this prelate prefixed some account of the life, writings, and character of the author, and in the conclusion, expresses himself thus: -" Having thus paid this last duty to the memory of this excellent man, which I could not but efteem a debt to such a benefactor to the cause of religion and learning united, and, as these works of his must last as long as any language remains to convey them to future times, perhaps I may flatter myfelf, that this faint and imperfect account of him, may be transmitted down with them; and I hope, it will be thought a pardonable piece of ambition and felf-interestedness, if, fearful lest every thing else should prove too weak to keep the remembrance of myself in being, I lay hold of his fame to prop and support my own. I am fure, as I have little reason to expect, that any thing of mine, without fuch an affiftance, can live, I shall think myself greatly recompenfed, for the want of any other memorial, if my name may go down to posterity, thus closely joined to his, and I myfelf be thought of, and fpoke of, in ages to come, under the character of the friend of Dr. Clarke "nos of mar le la fi

Perhaps this may be looked up by fome, rather as an over-ftrained mark of diffidence and humility, a the bishop might very well be inposed to need no other testimory than his own works, in order to m down to posterity, and to live in the voice and memory of men-but this mark of fingular condescension must be chiefly imputed to a zeal for those tenets which the doctor is warmly patronized. In 1734, bishop Hoadley was translated to Winchefter, (on the demise of Dr. Wil lis) and published his Plain Account of the Sacrament; a performance which served as a butt for his adverfaries to shoot at, against which they pointed their arrows, and le velled their artillery; yet impartiality owns it to be clear, rational, and manly, wrote with great candour and judgment, and fuited to the capacity of every ferious and confiderate enquirer after truth. His fermons (published in 1754 and 1755,) are efteemed inferior to few writings in the English language, for plainness and peripecuity, energy and ftrength of reafoning, and a free and masterly manner. mobogik to 5

Having now gone through the principal parts of his life and writings, I come to speak of his private character; and here there is one particular with regard to his lordfhip which is worthy of observation, and that is __ he was not always happy in the objects on whom he conferred his favours; I shall mention three inflances to confirm this remark. - Sagier - Pillonier - Four-The first; the bishop himself nier: told me, proved highly unworthy of his regard. of The lecond (whom he honoured with particular marks of

Dr. Snape and Dr. Sherlock were the chief of them.

regard)

gard) the hishop owns (in his leter to Mr. Chevalier, published 1758,) did not act agreeable to the ligations he had received. The of inflance is too recent to need ny mention here. These serve only o hew the natural philanthropy of is temper and disposition, prone o hospitality and munificence, -- that therity, which hopeth all things, and believeth all things, which, ing a ftranger to guile itself, is laid open to the treachery of others. The accuracy, with which the bishop drew up an account of the behaviour of Fournier, (in that letter before-mentioned) is a strong proof, that in fuch an advanced age, he still retained the exercise of his mental powers in full vigour, and that " the natural force of his intellectual faculties was not abated."

I come now to the last period of his life: he died (April 17, 1761) fatisfied with a long life, equally full of days and honour, and with a pleasing prospect of that salvation which God had shewed him. His writings in savour of civil and religious liberty, will render his memory dear to this nation, as long as the love of freedom is the characteristic of Britons; and his name will always be mentioned with honour, by every friend to religion, learning, truth, and virtue.

has been in this .- And what is very remarkable, this place t has enjoyed the benefit of their instruction for more than 70 years. - Here give me leave to observe a fimilitude of circumstances between his fon and him. It pleased God to prolong the fon's days, even beyond those of his father, to preferve to him his great understanding, and to give him leifure to review his incompatable Discourses, and to make them fit for the reception which the world has given them. He too has had his controversies, and those carried on with warmth and spirit; but without any injury to his temper, or any interruption to his thoughts and mind. His father lived in more difficult times, had much to struggle with, and perhaps had more of labour in his composition. The fon was more bright and brilliant, and carried a greater compais of thought and genius along with him. The one wrote with great care and circumfpection, as having many adversaries to contend with; the other with greater ease and freedom, as rifing superior to all opposition. Indeed, the fon had much the advantage of his father, in respect to the time and other circumstances of his life; not to fay what I believe must be owned by all, that his ratural abilities and talents were much greater.-He was made mafter of the Temple very young, upon the refignation of his father, and was obliged to apply himself closely to bufinels, and take infinite pains to qualify himfelf for that honourable employment; which he effectually did in the course of a few years, and became one of the most celebrated preachers of that time.

In this flation he continued many

Some account of the late Dr. Thomas

+ The. Temple.

Sherlock, who died July v8, 1761, aged 84. Extracted from his funeral fermon, preached by Dr. Nicolls, master of the Temple.

years, preaching constantly, rightly dividing the word of God, and promoting the falvation of fouls For his preaching was with power; not only in the weight of his words and argument, but in the force and energy with which it was delivered. For though his voice was not melodious, but accompanied rather with a thickness of speech, yet were his words attered with fo much propriety, and with fuch strength and vehemence, that he never failed to take possession of his whole audience, and fecure their attention. This powerful delivery of words, fo weighty and important, as his always were, made a ftrong impreffion upon the minds of his hearers, and was not foon forgot. And I doubt not but many of you fill remember the excellent inftruction you have heard from him to your great comfortumos adi

About this time also it was, that he published his much-admired difcourses upon the Uje and Intent of Prophecy, which did fo much fervice to the cause of Christianity, then openly attacked by some daring onbelievers nietmiem ni bri

Upon the accession of his late majesty to the throne, he was foon diffinguished; and, with another truly eminent divine, [bishop Hare] advanced to the bench, where he fat with great luftre for many years; in matters of difficulty and nice difcernment ferving his king and country, and the church over which he prefided, with uncommon zeal and prudence. Indeed fuch was his difcretion and great judgment, that all ranks of persons were desirous of knowing his opinion in every case, one general visitation of his diocese and by his quick and folid judg- oin person a may onhe extended his ment of things he was able to do care to parts abroad, and began is great good to many individuals, and b correspondence there, which would

But

All this time, while he was the taken up in the business of the ft. tion to which he was advanced, he yet continued to preach to his congregation during term; and in the vacation conftantly went down to vifit and to refide in his diocefe: where he spent his time in the mot exemplary manner; in a decent hospitality; in repairing his churchs and houses, wherever he went; in converfing with his clergy; and in giving them and their people proper directions, as the circumstance of things required.

And thus did this great man ly himself out for the public good; always bufy, always employed, h long as God gave him health and ftrength to go through those variou and important offices of life, which were committed to his care.

But now, though his mind and understanding remained in full vigour, infirmities of body began to creep very fast upon him. And then it was that he declined, when of fered him, the highest honours of this church, because he was sensible, through the infirmities he felt, he should never be able to give that perfonal attendance, which that great office requires. And this also induced him afterwards to accept the charge of this diocese wherein we live, because his business would be at home and about him; and would require no long journies, for which he found himself very unic And certain it is, that for the fift three or four years he applied himfelf closely to business, and made

have been very uleful to the church, f his health had permitted him to carry it on : but about that time it pleased God to visit him with a very dangerous illness, from which indeed he recovered, but with almost the total loss of the use of his limbs; and foon after his speech failing him, he was constrained to give over the exercise of his function and office, and was even deprived of the advantages of a free conver-

But though he was thus obliged to provide for the ministerial office, yet he still took care himself for the dispatch of business. For the mind was yet vigorous and strong in this weak body, and partook of none of its infirmities. He never parted with the administration of things out of his own hands, but required an exact account of every thing that was transacted; and where the business was of importance and consequence enough, he would dictate letters, and give directions about it himself. Under all his infirmities, his foul broke through like the fun from the cloud, and was visible to every eye. There was a dignity in his aspect and countenance to the very last. His reason sat enthroned with him, and no one could approach him without having his mind filled with that respect and veneration that was due to fo great a character.

His learning was very extensive: God had given him a great and an understanding mind, a quick comprehension, and a solid judgment.

orators; from whence he acquired that correct and elegant stile, which appears in all his compositions. His knowledge in divinity was obtained from the study of the most rational writers of the church, both ancient and modern; and he was particularly fond of comparing scripture with scripture, and especially of illustrating the epistles and writings of the apostles, which he thought wanted to be more studied, and of which we have some specimens in his own discourses. His skill in the civil and canon law was very confiderable; to which he added fuch a knowledge of the common law of England, as few clergymen attain This it was that gave him that influence in all cases where the church was concerned, as knowing precisely what it had to claim from its conflitutions and canons, and what from the common law of the

His piety was conflant and exemplary, and breathed the true fpirit of the gospel. His zeal was warm and fervent in explaining the great doctrines and duties of Chriftianity, and in maintaining and eftablishing it upon the most solid and fure foundations.

His munificence and charity was large and diffusive; not confined to particulars, but extended in general to all that could make out any just claim to it.

The instances of his public charities, both in his life-time and at his death, are great, and like himfelf. He hath given large fums of These advantages of nature he im- money to the corporation of clergyproved by much industry and appli- men's sons, to several of the hospication; and in the early part of his tals, and to the fociety for propalife had read and digested well the gating the gospel in foreign parts. antient authors both Greek and La- And at the instance of the land toun, the philosophers, poets, and ciety, he consented to print at his

own charge an impression of 2000 fets of his valuable Difcour fes, at a very confiderable expence. And they have been actually fent to all the islands and colonies of America. And by the care of the governors and clergy, it is hoped by this time, that they are all properly distributed among the people of their respective colonies, to their great improvement in the knowledge of rational and practical christianity. And to mention one inflance more of his great charity and care for the education of youth, he has given to Catherine-hall in Cambridge, the place of his education, his valuable library of books; and, in his life-time, and at his death, donations for the founding a librarion's place, and a scholarship, to the amount of several thousand pounds.

Besides these, and many other public instances of his charity and muniscence which might be mentioned, the private flow of his bounty to many individuals was constant and regular; and upon all just occasions he was ever ready to stretch ferth his hand towards the needy and afflicted; of which no one can bear testimony better than myself, whom he often employed as the

distributor of it.

He was indeed a person of great candour and humanity, had a tender feeling of distress, and was easily touched with the missortunes of others. No man was ever more happy in domestic life, and no one could shew greater gentleness, goodnature, and affection to all around him. To his servants he was a kind and tender master; he knew how to reward sidelity and diligence; especially in those who had been long in his service. They were careful over him, and he remem-

bered their care, by leaving a large furn among them who had been nearest about him during his ilness.

Some account of the late Henry Field ing, E/q;

HEnry Fielding was born at Sharp. ham Park in Somerfetshire ner Glastonbury, April 22, 1707. His father, Edmund Fielding, served in the wars under the duke of Mark borough, and arrived to the rank of lieutenant general, at the latte end of George I, or the beginning of George II. His mother was the daughter of judge Gold, the grandfather of the present Sir Henry Gold, one of the barons of the Exchequer. By these his parents he had four fifters, Catharine, Urfula, Sarah and Beatrice; and one brother, Edmund, who was an officer in the marine fervice. Sarah Fielding, his third filter, is well known to the literary world by many elegant performances. Our author's mother having paid her debt to mature, lieutenant general Fielding married a fecond time, and the issue of that marriage were fix sons, George, James, Charles, John, William and Bafil, all dead, excepting John, who is at present in the commission of the peace for Middlesex, Surry, Essex, and the liberties of Westminster. Henry Fielding received the first rudiments of his education at home, under the care of the Rev. Mr. Oliver, of whom he has given a very humorous and striking portrait in Joseph Andrews, under the name of parlon Traffiber. From Mr. Oliver's can he was removed to Eton School where he became acquainted with

ord Lyttelton, Mr. Fox, Mr. Pitt, Sir Charles Hanbury Wilams, the late Mr. Winnington, When he left this great femiary, he was faid to be uncomnonly versed in the Greek and Latin claffics; for both which he ever retained a ftrong admiration. From Eton he was fent to Leyden, and there he studied the civilians for about two years. Remittances failing, at the age of twenty, or thereabout, he returned from Leyden to London, where, though under age, he found himself his own mafter: from that fource flowed all the inconveniences that attended him throughout the remainder of The brilliancy of his wit, his life. the vivacity of his humour, and his high relish of social enjoyment, soon brought him into request with the men of tafte and literature, and with the voluptuous of all ranks. His finances were not answerable to the frequent draughts made upon him by the extravagance which naturally followed. He was allowed, indeed, zoel, a year by his father, but, as he himself used to fay, any body might pay it that would. The fact was, general Fielding having married again soon after the death of our author's mother, had fo large an increase of family, and that too so quick, that he could not spare any confiderable difburfements for the maintenance of his eldeft fon. Of this truth Henry Fielding was feasible, and he was therefore, in whatever difficulties he might be involved, never wanting in filial piety, which, his nearest relations agree, was a thining part of his cha-Disappointments, indeed, were observed to provoke him into eccasional peevishness, and severity of animadversion: but his general

temper was remarkably gay, and for the most part overflowing into wit, mirth, and good humour. As he disdained all littleness of spirit, wherever he met with it in his dealings with the world, his indignation was apt to rife; and as he was of a penetrating discernment, he could always develope felfishness, mistrust, pride, avarice, interested friendship, the ungenerous, and the unfeeling temper, however plaufibly disguised; and as he could read them to the bottom, so he could likewife affault them with the keenest strokes of spirited and manly fatire. Disagreeable impressions never continued long upon his mind; his imagination was fond of feizing every gay prospect, and, in his worst advertities, filled him with fanguine hopes of a better fituation. To obtain this, he flattered himself that he should find his refources in his wit and invention; and accordingly he commenced a writer for the stage in the year 1727, being then about twenty years of age.

His first dramatic piece soon after adventured into the world, and was called, Love in several Masques. It immediately succeeded the Provoked Husband, a play, which, for the continued space of twenty-eight nights received as great and as just applauses, as ever were bestowed on the English stage. Notwithstanding these obstacles, Fielding's play was savourably received. His second play, the Temple Bean, appeared the year after. From the year 1727, to the end of 1736, almost all his plays and farces were written, not above two or three having appeared since that time; so that he produced about eighteen theatrical performances, plays and farces in-

cluded,

cluded, before he was quite thirty years old. Though in the plan of his pieces he is not always regular, yet he is often happy in his diction and file; and in every groupe, that he has exhibited, there are to be feen particular delineations that will amply recompense the attention bestowed upon them. The comedy of the Miser, which he has mostly taken from Moliere, has maintained its ground upon the stage ever fince it was first performed, and has the value of a copy from a great painter by an eminent hand. If the comedy of Pasquin was restored to the stage, it would perhaps be a favourite entertainment with our audiences. faid, that the wit and humour of our modern Aristophanes, Mr. Fielding, whose quarry in some of his pieces, particularly the Historical Register, was higher game than in prudence he mould have chosen, were principal instruments that occafioned that law, which subjected all new pieces to the inspection of a licenfer tactas

In the comedy called Rape upon Rape, or the Coffee - boufe Politician, we have an admirable draught of a character very common in this country, mamely, a man who is fmitten with an infatiable thirst for news, and concerns himself more about the balance of power than of his books. The folly of these statesmen out of place is there exhibited with a mafterly ridicule; den, Mr. Fielding made some dand indeed in all the plays of our forts towards a comedy in the ketth author, however in some respects de- of Don Quixote in England. When ficients there are strokes of humour he left that oplace, and settled in and half-length paintings, not ex- London, a variety of character atcelled by fome of the ablest artists. tracted his notice, and of court His farces were almost all of them ferved to ffrengthen his favourit very faccessful, and many of them inclinations the inconfidences that are fill acted every winter with ap- flow from vanity, from affectation,

probation. They were generally the production of two or three mornings. It need not be observed, in justification of their being preferved in the fame collection win his more important works, the farce is deemed by our best critis an appendage of the theatre, as well as pieces of a higher nature. A learned and excellent critic the Rev. Mr. Hurd) has given it afd confideration in his Differtation or the feveral Provinces of the Dram. "The representations, fays he, of common nature may either be take accurately, fo as to reflect a faithful and exact image of their original which alone is that I would call Comedy; or they may be forced and overcharged above the fimple and just proportions of nature; a when the excesses of a few at given for flanding characters, when not the man (in general) but the passion, is described; or when, in the draught of the man, the leading feature is extended beyond merfure; and in these cases the reprefentation holds of the province of farce." The Lottery, the Intriguing Chambermaid, and the Virgin Unmasked, besides the real entertainment they afford, had on their first appearance this additional merit, that they ferved to make early discoveries of that true comit genius which was then dawning forth in Mrs. Clive.

has passed a judgment upon Ben eminence, may be justly applied to patible with humour and ridicule. him. "His tafte for ridicule was

woundings which every fresh disappointment gave Fielding, before he was yet well disciplined in the school of life: and perhaps too the afperity of his Muse was not a little encouraged by the practice of two great wits, who had fallen into the fame vein before him; I mean Wycherley and Congreve, who were not fond of copying the amiable part of human life. In his ftyle. Mr. Fielding derived an error from the fame fource: he fometimes forgot that humour and ridicule were the two principal ingredients of comedy; and, like Congreve, he frequently aimed at decorations of wit, which do not appear to make part of the ground, but feem rather to be embroidered upon it.

There is another circumstance refpecting the drama, in which Fielding's judgment feems to have failed cellence of Mr. Fielding : in dra- him : the strength of his genius matic imitation he must be allowed certainly lay in fabulous narration; to fall thort of the great masters in and he did not sufficiently consider that some incidents of a story, which, An ingenious writer (Mr. Hurd) when related, may be worked up into a deal of pleasantry and hu-Johnson, which, though Fielding mour, are apt, when thrown into did not attain the same dramatic action, to excite sensations incom-

To these causes of his failure in strong, but indelicate, which made the province of the drama, may be him not over-curious in the choice added that fovereign contempt he of his topies. His flyle in pictu- always entertained for the underring his characters, though master- standings of the generality of manly, was without that elegance of kind. It was in vain to tell him, hand, which is required to correct that a particular scene was dangeand allay the force of fo bold a co- rous on account of its coarfeness, louring. Thus the byas of his na- or because it retarded the general ture leading him to Plantus rather business with feeble efforts of wit; than Terence, for his model, it is he doubted the discernment of his not to be wondered that his wit is auditors, and fo thought himfelf fetoo frequently caustic; his raillery cured by their stupidity, if not by coarfe; and his humour excessive." his own humour and vivacity: This want of refinement feems to very remarkable instance of this difhave been principally owing to the polition appeared, when the co-

medy of the Walding Day was put into rehearfal. As actor, who was principally concerned in the piece, and, shough young, was then, by the savantage of happy requifites, an early favourite of the public, told Mr. Fielding be was apprehenfive that the audience would make free with him in a particular palfage ; adding, that a repulse might to flurry his spirits as to disconcert him for the rest of the night, and therefore begged that it might be omitted, "No, d-mn 'em, replied the bard, if the fcene is not a good one, let them find that out." Accordingly the play was brought on without alteration, and, just as had been forefeen, the disapprobation of the house was provoked at the passage before objected to; and the performer, alarmed and uneafy at the biffes he had met with, resired into the green-room, where the author was foliacing himfelf with a bottle of champaign. He had by this time drank pretty plentifully; and cocking his eye at the the treasurer of the play-house. aftor while ftreams of tobacco trickled down from the corner of his mouth, "What's the matter, Garrick's fays he, what are they hiffing new ? Why the fcene that I begged you to retrench ; I have it would not do, and they have to frightened me, that I shall not be able to collect myself again the whole night." "Oh! d-amin cm, replies the author, they have found it one, heverthey?"...

If we add to the foregoing remarks an observation of his own, lice of his enemies met with a noble namely, that he left off writing for alleviation from the patronage of the stage, when he ought to have the late duke of Richmond, John duke of Argyll, she late duke of fider his extreme harry and dispatch. Roxborough, and many persons place that he she fully to account for diffinguished rank and characteristics. his not bearing a more distinguished among whom may be numbered the

place in the rank of dramatic wi ters. It is apparent, that in the frame and conflictution of his gene there was no defect, but fome & culty or other was fuffered to dormant, and the reft of course were exerted with loss efficacy: one time we fee his wit superfedi all his other talents: at another in invention runs riot, and multiplie incidents and characters in a ma ner repugnant to all the received laws of the drama. Generally his judgment was very little confulted And indeed, how could it be other wife? When he had contracted in bring on a play, or a farce, le would go home rather late from tavern, and would, the next more ing, deliver a scene to the player written upon the papers which ha wrapped the tobacco in which he fo much delighted,

Though it was the lot of Henry Fielding to write always with view to profit, he derived but final aids towards his subfistence from One of his farces he has printed # it was damned at the theatre royal in Drury-lane; and that he might be more generous to bis enemies than they were avilling to be to him, he informs them, in the general preface to his miscellanies, that for the acted fix Wedding-Day, though nights, his profits from the houle did not exceed fifty pounds. A fate not much better attended him in his earlier productions: but the feverity of the public, and the me lice of his enemies met with a noble alleviation from the parropage of the late duke of Richmond, John

refent lord Lyttelton, whose friendip to our author softened the riour of his missortunes while he
wed, and exerted itself towards
is memory when he was no more,
y taking pains to clear up impuations of a particular kind, which
ad been thrown out against his
harafter.

Mr. Fielding had not been long a riter for the stage, when he mar-ied Miss Graddock, a beauty from alifbury. About that time his nother dying, a moderate efface at tower in Dorfetshire devolved to im. To that place he retired with is wife, on whom he doated, with resolution to bid adieu to all the ollies and intemperances of a town ife. But unfortunately a kind of amily-pride here gained an afcendtover him, and he began immelistely to vie in splendor with the leighbouring country squires. With a effate not much above two hunred pounds a year, and his wife's fortune, which did not exceed fiften hundred pounds, he encumered himself with a large retinue of fervants all clad in coftly yellow iveries. For their mafter's honour, these people could not descend so was to be careful in their apparel, but in a month or two were unfit to be feen; the fquire's dignity required that they should be new upped; and his chief pleasure mirth, hospitality threw open his doors, and in lefs than three years, entertainments, hounds, and horses. nirely devoured a little patrimony, which, had it been managed with conomy, might have fecured to him a flate of independence for the rea of his life. Sensible of the difagreeable fituation he had now reduced himself to, he immediately VOL. V.

determined to exert his best endeavours to recover, what he had wantonly thrown away, a decent competence; and being then about thirty years of age, he betook himfelf to the study of the law. The friendships he met with from some, who have fince rifen to be the first ornaments of the law, will for ever do honour to his memory. His application, while he was a student in the Temple, was remarkably intense: he has been frequently known by his intimates, to retire late at night from a tavern to his chambers, and there read, and make extracts from the most abstrufe authors, for several hours before he went to bed. After the customary time of probation at the Temple he was called to the bar. He attended with affiduity both in term-time and on the western circuit, as long as his health permitted; but the gout foon rendered it impossible for him to be as constant at the bar as the laboriousness of his profession required : he could only now follow the law by fnatches, at fuch intervals as were free from indisposition; which could not but be a dispiriting circumstance, as he saw himself at once disabled from ever rifing to the eminence he aspired to. However, under the severities of pain and want, he fill purfued his refearches with an engerness of curiofity peculiar to him; and, the' it is wittily remarked by Wycherly, that Apollo and Littleton feldom meet in the same brain, yet Mi. Fielding is allowed to have acquired a respectable share of jurisprudence, and in fome particular branches he is faid to have arisen to a great degree of eminence, more especially in crown law, as may be judged from his leaving two volumes in folio

folio upon that subject +. This work remains ftill papublished in the hands of his brother, Sir John Fielding; and by him I am informed that it is deemed perfect in fome parts. It will ferve to give us an idea of the great force and viyour of his mind, if we confider him purfuing so arduous a study under the exigencies of family-diffrefs, with a wife and children, whom he tenderly loved, looking up to him for subfishence, with a body lacerated by the acutest pains, and with a mind distracted with a thousand avocations, and obliged for immediate supply to produce almost extempore a play, a farce, a pamphlet, or a news-paper. A large number of fugitive political tracts, which had their value when the intidents were actually passing on the great forme of bufinels, came from called The Champion owed its chief support to his abilities; and though his effays in that collection cannot now be afcertained, yet the reputation arising to him at the time of publication was not inconfider-able. It does not appear that he able. It does not appear that he ever wrote much poetry: correct verification probably required more pains and time than his exigencies would allow. In the preface to his discellance he tells us, that his poetical pieces were mostly written when he was very young, and were productions of the heart rather than of the head. He adds, that this

branch of writing is what he my little pretended to, and was my little his pursuit. Accordingly or of the new edition of his work, which was intended to confit atirely of pieces more highly shifted than his works of mere amulement generally are, his verses are all dicarded.

In the progress of Henry Field. ing's talents there feem to have been three remarkable periods; on, when his genius broke forth a once, with an effulgence superin to all the rays of light it had before emitted, like the fun in his more ing glory; the fecond, when it was difplayed with collected force, and a fullness of perfection, like the fu in meridian majesty; and the third when the same genius, growt more cool and temperate, fill continued to cheer and enliven, be mewed at the fame time that it was tending to its decline, like the fine fun, abating from his ardor, but fill gilding the western hemisphere.

To these three epochas of on author's genius, there is an east correspondency in the Jaseph de dresus, Tom Jones, and Ameira. It will not be improper here to metion that the reverend Mr. Young a learned and much effected friesd of Mr. Fielding's, fat for passault of Mr. Fielding's, fat for passault able for his intimate acquainted with the Greek authors, and his as passionate a veneration for Ethylus as Parlien Adams; the ore-

The gentlemes of the western circuit have a tradition concerning Fielding which, though tomewhat inconsistent with the account that Mr. M. his gire of him, yet is perfectly agreeable to the idea generally entertained of his mour cane character. Making attended the judges two of three years wished she least properly of success, he published proposals for a new last book; which being circulated round the country, the young barrieter was, at the entire fixes, loaded with briefs at every town on the circuit.—But his practice its suddenly increased, almost as suddenly declined.

sowings of his benevolence were as grong, and his fits of reverie were as frequent, and occurred too upon the most interesting occasions. Of this last observation, a fingular infance is given by a gentleman who ferred, during the last war in Flanders, in the very same regiment to which Mr. Young was chaplain. On a fine fummer's evening, he thought proper to indulge himfelf in his love of a folitary walk; and accordingly he fallied forth from his tent : the beauties of the hemishere, and the landskip round him, pressed warmly on his imagination; his heart overflowed with benevolence to all God's creatures, and gratitude to the Supreme Difpenier of that emanation of glory which covered the face of things. It is very possible that a passage in his dearly beloved Aschylus occurred to his memory on this occasion, and leduced his thoughts into a profound meditation. Whatever was the object of his reflections, certain k is, that fomething did powerfully feize his imagination, fo as to preclude all attention to things that lay mmediately before him: and, in that deep at of absence, Mr. Young proceeded on his journey, till he arrived very quietly and calmly in the enemy's camp, where he was, with difficulty, brought to a recollection of himself by the repetition of Qui wall, from the foldiers upon duty. The officer who commanded, finding that he had strayed thicker in the undefigning fimplicity of his heart, and feeing an innate goodach in his prisoner, which com-

medy, the Wedding-Day, was exhibited on the flage; and, as we have already observed, it was attended with an indifferent there of success. The law from this time had its hot and cold fits with him. The repeated shocks of illness disabled him from being as affiduous an attendant at the bar, as his own inclination, and patience of the most laborious application, would otherwife have made him. Befides the demands for expence, which his valetudinarian habit of body constantly made upon him, he had likewife a family to maintain; from bufiness he derived little or no supplies, and his prospects therefore grew every day more gloomy and melancholy. these discouraging elecumitances, if we add the infirmity of his wife, whom he loved tenderly, and the agonies he felt on her account, the measures of his afflictions will be well nigh full. To see her daily languishing and wearing away before his eyes, was too much for a man of his strong fensations; the fortitude of mind, with which he met all the other calamities of life, deferted him on this most trying occasion; and her death, which happened about this time, brought on such a vehemence of grief, that his friends began to think him in dan-ger of losing his reason. When the first emotions of his forrow were abated, he began again to firggle with his fortune. He engaged in two periodical papers fucceffively; the first of these was called The True Patricks which swas let on foot during the late rebelmanded his respectly very politely lion, and was conducive to the extemplations home again and anuce out the confliction in the breaks of his Soon after the publication of 70- countrymen. The Jacobite Jourleth Andrews, Fielding's last co- nat was calculated to discredit the C 2

fhattered remains of an unsuccessful party, and, by a well-applied raillery and ridicule, to bring the fentiments of the disaffected into

contempt.

By this time Fielding had attained the age of forty-three; and being incessantly pursued by reiterated ateacks of the gout, he was wholly rendered incapable of pursuing the business of a barrifter any longer. He was obliged therefore to accept the office of an acting magistrate in the commission of the peace for Middlesex, with a yearly pension out of the public-fervice money. That he was not inattentive to the calls of his duty, is evident from the many tracts he published relating to feveral of the penal laws, and to the vices and mal-practices which those laws were intended to restrain, particularly a Charge to the grand jury, delivered at Westminster on the 29th of June, 1749, and the Enquiry into the Cause of the Increase of Robberies, and a Proposal for the Maintenance of the

Amidst these severe exercises of his understanding, and all the laborious duties of his office, his invention could not he still; but he sound leisure to amuse himself, and afterwards the world, with the History of Tom Jones. And now we are arrived at the second grand epoch of Mr. Fielding's genius, when all his faculties were in perfect union, and compired to produce a complete work, eminent in all the great effectials of composition, in sable, character, senti-

ment, and elocution; and as the could not be all united in fo hish an affemblage, without a rich invention, a fine imagination, an enlightened judgment, and a lively wit, we may fairly here decide his character, and pronounce him the English Cervantes. It may be add. ed, that in many parts of the Ton Jones we find he possessed the softer graces of character-painting, and of description; many fituations and fentiments are touched with a delicate hand, and throughout the work he feems to feel as much delight in describing the amiable part of human nature, as in his early days he had in exaggerating the ftrong and harsh features of turpitude and deformity. This circumstance breathes an air of philanthropy through his work.

Thus have we traced our author in his progress to the time when the vigour of his mind was in it full growth of perfection; from this period it sunk, but by slow degrees, into a decline: Amelia, which succeeded Tom Jones in about squr years, has indeed the marks of genius; but of a genius beginning to fall into its decay. Amelia is the Odyssey, the moral and pathetic work, of Henry Fielding.

While he was planning and executing this piece, it should be remembered, that he was distracted by that multiplicity of avocations which surround a public magistrate; and his constitution, now greatly impaired and enseebled, was labouring under the attacks of the gost, which were, of course, several than

copy corrected by the author's own hand. The exceptionable passes, which insulvertency had thrown out, are here retrenched award the work, upon the whole, will be found nearer perfection than it was limits original flate.

eves.

ever. However, the activity of his mind was not to be subdued. One literary pursuit was no sooner overthan fresh game arose. A periodical paper, under the title of The Covent Garden Journal, by Sir Alexander Drawcanfir, Knight, and Cenfor-General of Great Britain, was immediately fet on foot. It was published twice in every week, viz. on Tuesday and Saturday, and conduced so much to the entertainment of the public, that it was felt with a general regret that the author's health did not enable him to perfift in the undertaking any longer. Soon after this work was dropt, by the advice of physicians Mr. Fielding fet out for Lisbon: the last gleams of his wit and humour sparkled in the account he left behind him of his Voyage to that place. In this his last sketch he puts us in mind of a person, under sentence of death, jesting on the scaffold; for his strength was now quite exhausted; and in about two months after his arrival at Lifbon, he yielded his last breath, in the year 1754, and in the fortyeighth year of his age.

He left behind him (for he marned a second time) a wife, and four children, three of which are fill living, and are now training up in a handlome course of education under the care of their uncle, with the aid of a very generous donation, given annually by Ralph Allen, Efq; for that purpole. An inflance of humanity, which the reader did not want to learn of him, whose life is a constant effusion of munificence; but for the take of the writer, whole works have aforded fuch exquisite entertainment, he will be glad to know that the now the tender guardian of his or-

Thus was closed a course of disappointment, diftress, vexation, infirmity, and fludy: for with each of these his life was variously chequered, and, perhaps, in stronger proportions than has been the lot of many. We have feen how Mr. Fielding very foon fquandered away his fmall patrimony, which, with economy, might have procured him independence; we have feen how he ruined, into the bargain, a constitution, which, in its original texture, feemed formed to last much longer. When illness and indigence were once let in upon him, he no longer remained the master of his own actions; and that nice delicacy of conduct, which alone constitutes and preferves a character, was occafionally obliged to give way. When he was not under the immediate urgency of want, they, who were intimate with him, are ready to aver, that he had a mind greatly superior to any thing mean or little; when his finances were exhausted, he was not the most elegant in the choice of the means to redress himself, and he would infantly exhibit a farce or a puppetthew in the Hay-market theatre, which was aboly inconsistent with the profession be had embarked in. But his intimates can witness how much his pride fuffered, when he was forced into measures of kind; no man having a juster sense of propriety, or more honourable ideas of the employment of an au-Henry Fielding was in flature

the writer, whose works have after rather rising above fix feet; his forded such exquisite entertainment, frame of body large, and remarked will be glad to know that the ably robust, till the gout had broke generous patron of the father is the vigour of his constitution. His

friend Hogarth, to whom he often promifed to fit, and for whom he has left us in his writings many beautiful memorials of his affection, had long laboured to try if he could bring out any likeness of him from Images existing in his own fancy? and just as he was despairing of fuccess, for want of some rule to go by in the dimensions and outlines of the face, fortune threw the grand defideratum in the way. A lady, with a pair of fciffars, had cut a profile, which gave the di-Rances and proportions of his face fufficiently to restore the artist's lost ideas of him. Glad of an opportunity of paying this last tribute to the memory of an author whom he admired, Mr. Hogarth caught at this outline with pleasure, and worked with all the attachment of friendship till he finished an excellent drawing, which stands at the head of the new edition of his works. works.

Mr. Murphy gives the character of Fielding in the following terms : His paffions, as the poet expresses it, were tremblingly alive all der: whatever he defired, he defired ardently; he was alike impatient of disappointment or ill-mage, and the fame quickness of fenfibility rendered him elate in prosperity, and overflowing with graticade at every instance of friendship or generofity: fleady in his private attachments, his affection was warm, fincere, and vehement; in his re- he never betrayed; the former it Seatments he was manly, but tem- amiably enforced in his works; and perate, feldom breaking out in his for the defence of the latter, he writings into grafifications of ill- had projected a laborious Anfwer h humour, or personal fatire. It is the pastbumous Philosophy of Be the honour of those whom he lingbrokes and the preparation he loved, that he had too much pene- had made for it; of long extract tration to be deceived in their cha- and arguments from the fathers and tacters; and it is to the advantage the most eminent writers of contro

of his enemies, that he was alon paffionate attacks upon them, Open unbounded, and focial in his temper he knew no love of money; but is chaing to excess even in his ver virtues, he passed his contempt of avarice into the opposite extreme of imprudence and prodigality. Wha young in life he had a modern effate, he foon fuffered hospitaling to devour it; and when in the latter end of his days he had an income of four or five hundred a-year, he knew no use of money, but to keep his table open to those who had been his friends when your and had impaired their own fortunes. Tho' disposed to gallanty by his strong animal spirits, and the vivacity of his passions, he was remarkable for tendernels and constancy to his wife, and the strongel affection for his children. Of fickness and poverty he was singularly patient, and under the preffured shofe evils he could quietly red Cicera De consolatione; but if eithet of them threatened his wife, he was impetuous for her relief; and that often from his virtues arose his mperfections. A fense of honour he had as lively and delicate, as most men; but fometimes his pations were too turbulent for it, or rather his necessities were too pressing; in all cafes where delicacy was departed from, his friends knew how his own feelings reprimanded him The interest of virtue and religion

An account of the Life of Ariosto.

Odovico Ariosto, the famous Ita-L lian poet, and author of Orlando Furioso, was born at the cafile of Reggio in Lombardy in 1474. His father, who was major-domo to duke Hercules, lived to the extent of his fortune, so left but little at his death. Ariosto, from his childhood, shewed great marks of genius, especially in poetry, and wrote a comedy in verse on the story of Pyramus and Thifbe, which his brothers and fifters played. His father being utterly unlearned, and rather regarding profit than his fon's inclination, compelled him to study the civil law; in which, having plodded some years to no purpose, he quitted it for more pleafing ftudies. Yet often lamented, as Ovid and Petrarch did before him, and our own Milton fince +, that his father banished him from the mules. On which occasion, one cannot help observing, how cruel and impolitic it is marents to force their chil-

verly, is fill extant in the hands of dren from those prevailing studies to which their genius leads them, and make them apply to others, which, as they hate, can never be a credit or advantage to them. At the age of twenty-four Ariofto loft his father, and found himself perplexed with family affairs, However, in about fix years he was, for his good parts, taken into the fetvice of Don Hippolito, cardinal of Este. At this time he had written nothing but a few fonnets; but now he resolved to make a poem, and chose Bayardo's Orlando Inamorate, for a ground-work: However, he was prevented writing for a great many years, and was chosen as a fit person to go on an embaffy to pope Julio II. where he gave fuch fatisfaction, that he was fent again, underwent many dangers and difficulties, and at his return was highly favoured. Then at his leifure, he again applied himself to his poem: but foon after he incurred the cardinal's displeasure, for refusing to accompany him into Hungary, by which he was fo difcouraged, that he deferred writing for fourteen years, even till the cardinal's death. After that he finished by degrees, in great perfection, that which he begun with great expectation. Duke Astolfo offered him great promotions if he would ferve him; but preferring liberty to grandeur, he refused this and other great offers from princes and cardinals, particularly from Leo X. from all whom he received notwithstanding great presents. The dake of Ferrara delighted so much in his comedies, of which he wrote five, that he built a stage on purpose to have them played in his

t Seehis Latin poem, Ad Patrem.

court, and enabled our poet to part of my play." Which, by the build himfelf a house in Ferrara, way, is not near fo bad as the flow with a pleasant garden, where he of a famous painter, who have used to compose his poems, which prevailed on a man to be in were highly effeemed by all the naked to a cross to represent a tr. princes in Italy, who fent him many presents; but he faid, " he would not fell his liberty for the best car- nies of death. It is also reported dinal's hat in Rome." In his diet he was temperate, and so careless of dainties, that he was fit to have lived in the world when they fed upon acorns. Whether he was ever married is uncertain. He kept company with one Alexandra, to whom, it was reported, he was married privately, and a lady Genevera, whom he flily mentions in the 24th book of Orlando, as poets are apt to intermix with their fictions some real amours of their own. He was urged to go ambassador to pope Clement, but would by no means accept it. He translated the Menecmi of Plautus : and all his own comedies were fo esteemed, that Don Francisco of Este rehearsed the prologue himself in public. He began one of his comedies in his father's life-time, when the following incident shews the remarkable talent he had for poetry. His father one day rebuked him fharply, charging him with some great fault. but all the while he returned him no answer. Soon after his brother began on the same subject; but he eafily refuted him, and with firong arguments, justified his own behaviour. "Why then, faid his brother, did you not fatisfy my father?" "In truth, faid Lodovico, I was thinking of a part in my comedy, could fo well describe the courage, and methought, my father's freech to me was fo faited to the part of of an Orlando Furioso, as well as of an old man chiding his fon, that I many other renowned and valunt forgot I was concerned in it myfelf, knights, and valiant ladies too! and confidered it only to make it that certainly be was much fitter to

cified faviour, took occasion to the him, the better to represent the are. of Ariosto, that coming by a potter's shop, he heard him singing ; stave out of his Orlande, with 6 bad a grace, that, out of all pap. ence, he broke with his flick fereral of his pots; the potter, int pitiful tone, asking what he ment by wronging a poor man that had never injured him, "You rafal, he replied, I have not done the half the wrong thou hast done me, for I have broken but two or three pots of thine, not worth to may halfpence; whereas, thou half broken and mangled a ftanza of mine worth a mark of gold." 1 bemail

Rubens pire. How his abilities distinguishcame over, Inigo Jones arose, and ed themselves in a spot where they Architecture broke forth in all the certainly had no apportunity to act, luftre and purity of Rome and we are not told though it would Athens, woodevrem bas digneral denot be the least curious part of his The greatest around of this pro- history : certain it is, that, on the fellion that has appeared in sthefe strength of his reputation at Venice, kingdoms, and so great, that, in Christian IV. invited him to Den-

tect : but on what buildings he was employed in that country, we are yet to learn. James I. found him at Copenhagen, and queen Anne took him in the quality of her architect to Scotland. He ferved prince Henry in the fame capacity, and the place of furveyor-general of the works was granted to him in reverfion. On the death of that prince, with whom at least all his lamented qualities did not die, Jones travelled once more into Italy, and, affifted by ripeness of judgment, perfected his tafte. To the interval between thele voyages I should be inclined to affign those buildings of Inigo, which are less pure, and border too much upon that baftard stile, which one may call King James's Gothic. Inigo's defigns of that period are not Gothic; but haven littleness of parts, and a weight of ornaments, with which the revival of the Grecian tafte was encumbered, and which he shook off in his grander defigns. The furveyor's place fell, and he returned to England; and, as if architecture was not all he had dearned at Rome, with an air of Roman difinterestedness, he gave up the profits of his office, which he found extremely in debt; and prevailed upon the comptroller and paymaster to imitate his example, till the whole arrears were cleared.

In 1620, he was employed in a manner very unworthy of his genius: king James fet him upon difcovering, that is, gueffing, who were the founders of Stone-henge. His ideas were all romanized; confequently, his partiality to his favourite people, which ought rather to have prevented him from charging them with that mais of barbarous clumfiness, made him conclude it a Roman temple. It is remarkable,

that whoever has treated of the monument, has bellowed on it what ever class of antiquity he was proliarly fond of; and there is not ! heap of stones in these norther countries; from which nothing on be proved, but has been made in depose in favour of some of the fantastical hypotheses. Where there was fo much room for visions, the Phænicians could not avoid coming in for their share of the foundation; and, for Mr. Toland's part, he dicovered a little Stone-henge in Inland, built by the druides Gealorpa, (who does not know the druides Gealcopa?) who lived at Inisoen in the county of Donegal.

In the fame year lones was appointed one of the commissionen for the repair of St. Paul's; but which was not commenced till the year 1633, when Laud, then bishop of London, laid the first stone, and Inigo the fourth. In the restoration of that cathedral he made two capital faults. He first renewed the fides with very bad Gothic, and then added a Roman portico, magnificent and beautiful indeed, but which had no affinity with the ancient parts that remained, and made his own Gothic appear ten times heavier. He committed the same error at Winchester, thrusting a screen in the Roman or Grecian tafte into the middle of that cathedral. Jones indeed was by no means successful when he attempted Gothic. The chapel of Lincoln's-Inn has none of the characteristics of that architecture. The cloyster beneath seems oppressed by the weight of the building above.

The authors of the life of Jones place the erection of the Banqueting. house in the reign of king Charles; but it appears, from the accounts of

Nicho-

Nicholas Stone, that it was begun 1619, and finished in two yearss fmall pare of the pile designed for the palace of our kings; but fo less in itself, that it stands a edel of the most pure and beautifel taile. Several places of the inbeen given; but, Mr. Walpole thinks, from no finished delign. The four great sheets are evidently made up from general hints; nor could fuch a fource of invention and afte as the mind of Inigo, ever prodoce to much famenefs. The ftrange kind of cherubins on the towers at the end are prepolterous ornaments, and, whether of Inigo or not, bear no relation to the rest. The great towers in the front are too near, and evidently borrowed from what he had feen in Gothic, not in Roman buildings. The circular court is a picturesque thought; but without meaning or utility. The whole fabric, however, was fo glorious an idea, that one forgets for a moment (fays Mr. Walpole) in the regret for its not being executed, the confirmation of our liberties, obtained by a melancholy scene that passed before the windows of that very Banqueting-house.

In 1623 he was employed at Somerfet-house, where a chapel was to be fitted up for the Infanta, the intended bride of the prince. The chapel is still in being. The front to the river, part only of what was defigued, and the water-gate, were erected afterwards on the deligns of lnigo, as was the gate at York-

On the accession of Charles, Jones was continued in his posts under both king and queen. His fee, as forveyor, was eight fhillings and

of 46 l. a year for house-rent, befides a clerk, and incidental exences. What greater sewards he had; are not upon record, Confidering the havock made in offices and repositories during the war, one is glad of being able to recover the smallest notices.

During the prosperous state of the king's affairs, the pleasures of the court were carried on with much tatte and magnificence. Poetry, painting, music, and architecture were all called in to make them rational amusements. Mr. Walpole is of opinion, that the celebrated feftivals of Louis XIV. were copied from the shews exhibited at Whitehall, in his time the most polite court in Europe. Ben Johnson was the laureat; Inigo Jones the inventor of the decorations; Laniere and Ferabosco composed the symphonies; the king, the queen, and the young nobility, danced in the interludes. We have accounts of many of those entertainments, called

malques: they had been introduced

by Anne of Denmark. "

Lord Burlington had a folio of the defigns for these solemnities, by Inigo's own hand, confifting of habits, mailes, feenes, &c. The harmony of these masks was a little interrupted by a war that broke out between the composers, Inigo and Ben; in which, whoever was the aggressor, the turbulent temper of Johnson took care to be most in the wrong. Nothing exceeds the groffness of the language that he poured out, except the badness of the verses that were the vehicle. There he fully exerted all that brutal abuse which his cotemporaries were willing to think wit, because they were afraid of it; and which only feems four pence a day, with an allowance to fliew the arrogance of the man,

who prefumed to fatyrize Jones and

zival Shakespeare.

Another person, who seems to have borne much refentment to Jones, was Philip earl of Pembroke. In the Harleian Library there is an edition of Stone-henge, which formerly belonged to that earl, the margins of which were full of abase of Jones and others. Earl Philip's refentment was probably occasioned by fome difagreement while Jones was employed at Wilton: there he built that noble front in a grotto at the end of the water. Wilton is one of the principal objects in the History of Arts and the Belles Lettres: Sir Philip Sidney wrote his Arcadia there for his fifter; Vandyck drew many of the race; Holbein and Inigo Jones imagined the buildings; earl Thomas compleated the collection of pictures, and afsembled that throng of statues; and the last earl Henry has shewn, by a bridge defigned by himself, that had Jones never lived, Wilton might yet have been a villa worthy of ancient Rome.

The works of Inigo Jones are not scarce; Surgeons-hall is one of his best works. One of the most admired is the Arcade of Coventgarden and the Church: "Two structures, fays Mr. Walpole, of which I want tafte to fee the beauties. In the Arcade there is nothing remarkable; the pilasters are as arrant and homely stripes as any plaisterer would make. The barnroof over the portico of the church Arikes my eyes with as little idea of dignity or beauty, as it could do if it covered nothing but a barn. It must be owned, that the defect is not in the architect, but in the order.-Who ever faw a beautiful Tuscan building? Would the Romans have chosen that order for temple?" The expence of building that church was 4500.

Ambrefbury in Wilthire was de figned by Jones, but executed by his scholar Webb. Jones was ou of the first that observed the fame diminution of pilasters as in pillan. Lindfay-house, in Lincoln's-lan. Fields, which he built, owes in chief grace to this fingularity. In 1618 a special commission was iffeed to the lord chancellor, the earls of Worcester, Pembroke, Arundel, and others, to plant, and reduce to uniformity, Lincoln's-Inn-Fields, as it shall be drawn by way of map, or ground-plot, by Inigo Jones, furveyor-general of the works. That fquare is laid out with a regard to fo trifling a fingularity, as to be of the exact dimensions of one of the pyramids: this would have been admired in those ages, when the Keep at Kenelworth Castle was erected in the form of a horsefetter, and the Escurial in the shape of St. Laurence's gridiron.

Coleshill in Berkshire, the seat of Sir Matthew Pleydell, built in 1650, and Cobham-hall in Kent, were Jones's. He was employed to rebuild Caftle Ashby, and finished one front; but the civil war interrupted his progress there and at Stokepark in Northamptonshire. Shaftlbury-house, now the London Lying. in-hospital, on the east side of Alderigate-ffreet, is a beautiful front, The Grange, the feat of the lord chancellor Henley in Hampshire, s intirely of this maffer. It is not a large house, but by far one of the best proofs of his taste. The hall, which opens to a small vestibule with a cupola, and the stair-cale adjoining, are beautiful models of the pureft and most classic anuquity

Inigo tasted early the missortunes of his master. He was not only a favourite, but a Roman eatholic: in 1646 he paid 545 l. for his delinquency and sequestration. Whether it was before or after this sine, it is uncertain, that he and Stone the mason buried their joint stock of ready money in Scotland-yard; but an order being published to encourage the informers of such concealments, and four persons being privy to the spot where the money was hid, it was taken up, and reburied in Lambeth-marsh.

Grief, misfortunes, and age, put an end to his life at Somerfet-house, July 21, 1671.

Memoirs of M. d' Ensenada.

AT the beginning of the last war, when the count de Gages was going to embark for Italy, he found himself obliged to remain for a few days upon the sea coast, and having enquired for a house, where he might be tolerably accommodated, he was directed to that of an officer in the revenue, who, as his ex-

cellency was informed by the merchants of Cadiz, was the greatest oeconomist in Spain. Thither he went, and was received with equal politeness and respect. He had a very commodious apartment, in which every thing was elegantly neat, tho' there was nothing rich or expenfive. He was ferved with the utmost punctuality, and the landlord was fo very attentive, that he often forefaw his wants, and provided for them before they were mentioned. The count de Gages, one of the honestest, most grateful, and best tempered men in the world, was perpectly pleased with his fituation, and quite charmed with his landlord, who was ever ready to ferve him, though not troublesomely officious.

The count had a great many papers, memorials, instructions, relations, and other pieces of that nature, in the digesting of which, he had great occasion for a fecretary, and his own was fick. The landlord offered his affiftance, and told his excellency, by way of apology, that he had obtained this little employment by his fervice in the fecretary's office. The count very gladly accepted this offer, and was equally amazed at his dexterity and diligence, and was above all surprized at a certain perspicuity in method and propriety of stile, which he had scarce observed in any other man's writings. In fhort he found him at once fo useful and so agreeable, that he refolved not to part with him, and therefore without faying a word, he recommended him to the minister as a person that might be extremely necessary to him in Italy, as a commiffary of provisions; defiring, that as he meant to take him along with him, his commission and his instruc-

tions might be expedited by his fecretary, who was now to well me covered as to be in a condition to join his mafter. This request was accordingly complied with and from a small place in the customs. which fearce brought him hoe bundred dollars a year, he was granes with a title and an appointment of five thousand pieces of eight, with a power of drawing upon the treaary for one hundred times that fum's all which was but an earnest of his future fortunes.

The count de Gager being polselled of the commission, fert immediately for him to whom it helonged, and after many expressions of his entire fatisfaction, in merence to his conduct and capacity; as well as in regard to the entercom ment he had received in his house, afted him if he was willing to go with him to Italy. He answe very submissively to this, that he ed upon the honour dose his by his excellency as fo great w he was ready to follow him to the end of the earth, and that he defired only twenty-four hours time, to fettle his accounts. Monfigur de Gages preferred him with his com-million, which Enfended received th all the mirks of respectful gratimele, but without any fauning adulation; costy sciling his excel-lency, they has was atraid he had conceived see good on opinion of him, that he would do his atrack to him, that he would do his utuall to deferre it, and that if he found this exceeded his powers, he would re-figuishe commission, eather than dif-grace his benefather. At the fame time he was appointed commission, a person was sent down to increase win this formier office, who was defines of taking the furniture, and whatever elle belonged to Mi En- to thet Monfigur de Cages, him

fenada, at a reasonable price. The new commissary gave a fperior of his temper which furprized he equat de Gages, for inftent paming any fum, he sold him i be left a clerk and a couple of fe vants behind him, and that provide he was kind so them, all that he langed to him, was entirely at fervice; which his fuccesfor prom ed, and took him at his word.

His conduct in Italy did honourn the count de Gages' recommenda sion; he was equally affiduous and exact, indefaugeble in bufinels, a tentive to the general officets, d interested in respect to those of is ferior rank, and extremely affable to all who had any concern with him. In the course of that war, a every body knows, the count is Gages met with incredible diffic ties: he was expected to do with wary finall army, what would him been a hard task so perform with which more numerous. He was obliged to bear with the capiton this mafter Philip V. a monarch who the' he had an excellent heart, as allo a temper very unequal. Humnifters likewife were very far hom living on good terms, or in any degree of confidence, with each other and it was the interest of the cour to be well with them all, which is heartily endeavoured, and focced in it, better than could be expected. But what created the greatest unerfinels, was the flowners of the for places and it was this circumfin that anabled M. Enfenada to diffir guilt himself by continuing to fall guilt nametr by continue hours than perhaps any other man con have done lade

But as all things have a period, a length thele were quite were out

neral officers, and his commiffary, found themselves fairly at their wits ead, with the untoward prospect at no great distance, of having an army without either pay or magazines. In this flate of things, the count de Gages, and those whom he confulted, unanimously resolved to fend M. Enfenada into Spain, in hopes he might folicit better in person, than even by the many excellent memorials which he had transmitted to the court, on the melancholy subject of their diffresses. He chearfully accepted this commission, tho' at the fame time he observed, that he had firetched his personal credit to the very utmost; and that he was less afraid of falling into the hands of the enemy, than of being exposed to the refentment of his disappointed creditors. They expressed a very grateful fense of his condescention, in accepting this commission; and the rather, because they knew he had ever lived within bounds, and had only borrowed to preferve his friends from being pinched by necessity; and therefore they loaded him with recommendations to all the persons in power, with whom they had, or believed they had, any degree of intereft.

With these credentials M. Enfeads made the best haste he could to Madrid, and entered upon his solicitations with all the spirit and address possible. He was exceedingly well received by the ministers, who made him ample acknowledgements for the many services he had endered to the army; gave him abundant assurances, little assistance, and not a single real, though they did not pretend to question the truth of his representations. Instead of shunning, he sought out all his creditors, and after assorting them the

most convincing proofs, that he had not fquandered away their money, he told them plainly, that they must exert their interests with the great, in order to put it in his power to re-This was of more real pay them. fervice to him, than all the numerous packets that he brought from Italy, and procured him, by degrees, confiderable fums, which those very persons enabled the minister to raise: for the real fource of all this diffress was the emptiness of the royal coffers, an evil that a war very quickly brings on under a despotic government, where the knowledge that the state is under difficulties, drives individuals into feeking every method of concealing their money, without offering them any one motive to part with it. In the midit of these embarrassments, Philip V. was gathered to his fathers, and was succeeded by his son Ferdinand the fixth. A circumstance that naturally put a stop to public business of every kind.

This event, which would have dispirited any other man than our commissary, quickened his thoughts, and added a new foring of action. He entered into an acquaintance with some of the minor courtiers in order to learn from them the character of the new monarch. This he found to be absolutely impossible; fince they all agreed that he was fo filent and referved, that the only thing they knew about him was his extreme affection for the queen. As to her majesty, they represented her as a pious, virtuous, and affable princels, very fund of fruit, and who had a prodigious passion for jewels. M. Ensenada, reflecting a little upon this, took the proper measures for having a great quantity of the finest peaches from the king-

dom

dom of Valencia asslier than any body elfe, and prevailed upon a Jew to proture him a melon made in gold let with she finest stones, with a large diamond at the top, and a fire emerald where the stalk feeded to be broken off. This was placed on the summitted a filver pillar in the midst of a large salver filled with peaches, and being profested to the queen by one of the ladies of honour, procured M. Enfends an introduction at const, where his assiduity and address enabled him to make a much quicker progress than could well be imagined, to which his courteous behaviour and boundless generomy did not a little contribute; so that in a shore space of time he became a minister.

Thus far M. Ensenada's abilities

Thus far M. Enfenach's abilities formed to exceed with his forme; and it was a confidence arising from this that three him from a height which had really made him giddy. There was as fair time a minifest at the head of the Spanish countily, whose high firth and great experience would have excused many defects, if superior talents and a probity earely fear in courts had not surpassed the laster derived from his quality and his employments. This very worthy, as well as able man, saw in its true light the connection between the interests of spain and Great Britain, which were governed his conduct. Mi Ensenada, listed up by success, and besteving in the midst of grandeur that he was fall inconfiderable while there was yet any subject above him, struck into the course of Waspilles and Naples, in which he found himself bassed when

he least expected it, Bripped of his employments, and lent into enle notwithstanding all the effort of his powerful protectors. But as long after the commencement of the present reign he was again recalled to court, where, though no longer figures as a minister, he is yet known to have much credit, and is with great probability at least if not justice, suspected to have no small hand in the late sudden change of system in that court.

His His

Memoirs of Count Zinzendorff.

There is no court in Europe, or it may be in the world, more jealous of its grandeur, than that of Viennay; and of courfe, the minifiers in no court whatever affed greater flote, or are at more paint to imprefe a very high degree of reverence and respect upon all who have the bonour to approach them. But it sometimes happens, that even to candid observers, there are amazing littlemesses, visible in these otherwise great men; and broad streaks of folly now and then appear through all the grave wisdom and refined policy of these mighty states men. They give law so great kingdoms, they decide on the fatest potent nations, they prescribe rules oven to latest posterity, and in the midst of all this attention to other, for it is that they have great and glaring foibles, ascorrected in themselves; which naturally tarnifes that glory, and diminishes that a feem, in which they should seem to have placed their selicity.

that glory, and diminishes that of feem, in which they should seen to have placed their felicity.

Lewis doubt Zinzendors is to lebrated for his profound ministerial abilities, by all the memoir witters of the present age, from the interior of the present age.

marquis de Lamberti, down to be ingenious baron de Pollnitz. This illustrious count was descended om a very noble family in Austria. nd his mother was a princess of the onle of Holstein. He had a good rion, frong natural parts, improed by a regular education, and still uch more improved by long expeience in a variety of great employents, which he discharged with a referred reputation, and role graduly to the elevated flation of chantellor of the court, minister for forign affairs, and knight of the order of the Golden Fleece, in the nign of the emperor Charles the fixth. He had distinguished himsef, in the conduct of many perplexed gotiations: and it was to his consomate skill in politics we stand indebted for the famous Pragmatic Sastion, that has already made fach a soile in Europe, embarraffes tar present, and the consequences of which will probably reach, and ay perhaps again embarrais, ages at are still to come.

Baron de Pollnitz, with his usual are and circumspection, remarks, "That he kept the noblest and of elegant table at Vienna." This, which to a common reader, th likely, may appear no uncom-non circumstance, might very prohably have pleased that great minier more than all the fine things he said of him besides. With all is hining talents, and profound a-ulities, which had rendered him adred in fo many different courts, count was less zealous of his restation in the cabinet, than of his nour of displaying the most splendd, and the most exquisite table, that perhaps was ever kept, in that any other capital.

His magnificence in this point.

would have been truly wonderful, if it had not been eclipsed by various excellencies of a superior kind. His skill was so great, that he was equally acquainted with Afiatic and Italian luxury. His olios exceeded those of Spain; his pastry was much more delicate than that of Naples a his Perigord pyes were truly brought from thence; his faufages were made at Bologna; his macaroni by the grand Duke's cook: and as for his wines, no country that produced a grape of any repute, but a sample of it, for the honour of its vineyards, was to be found at his all-capacions fide-board, His kitchen was an epitome of the nniverse; for there were cooks in it of all nations; and in the adjacent numerous and spacious apartments, were to be found rarities collected from all the quarters of the globe. He had, in order to collect these, his agents for provisions in every country; the carriages on which they were laden came quicker and more regularly than the posts; and thole who were very well informed believed that the expences of his entertainments ran higher than that for secret correspondence, though very possibly they might be rendered subservient and useful to each other.

In his general conversation, the count was cautious and circum-spect; in his conferences with other ministers, reserved though very polite; but at his table all this state machinery was laid aside. There, to display his superior learning, he discoursed at large, and delivered the most curious as well as copious lectures on all his exotic and domestic delicacies. In these he shewed a true spirit of justice: no man was ever less a plagiary. This pillau

he had from prince Eugene, who had it from the bashaw of Buda : the egg foup was made after the mode of the marchiopes de Prie : the Roan ducks were flewed in the ftile of the cardinal du Bois; and withe lampreys i came ready dreffed from a great minister in England. His dishes furnished him with a kind of chronology; his water fouthy was borrowed from marshal d'Auverquerque's table, when he was first in Holland; the pheafant tourt was a discovery he made in Spain, where he was so lucky as to pick up a man, who, as a purveyor, had been in the fervice of that prince of bon-vivans the duke de Vendofine: but he always allowed, that the grand fchool of cookery was the congress at Soissons, where the political conferences indeed proved ineffectual, but the entertainments of the feveral ministers were fplendid beyond description. In a word withou strue - Apician eloquence, he generously instructed all the novices in good living; and, as Solomon discoursed of every herb, from the cedar of Lebanon to the hysop on the wall; so he began with a champignion no bigger than a Dutchman's wait coat button, and ended with wild boar, the glory of the German forefts de flore wis

ber On bhis publicadays, there was an half hour, and fometimes near a whole one, when he was altogether inaccessible; and with respect to his employment at those feafons, as is ever the case as to the privacies of prime ministers, these was a great variety of deep as well as different speculations ... An inquisitive foreigner, however, refolved to be at the buttom, bolt what it would; ry exhortation to thole, who is t and by a gratification to one of his very high station, may be a little pages, which might have produced tinged with this folly; and a ther

a greater fecret, he was let into the In order to gratify his curiofity, he was placed in a closet, between the room where the count was, and the chamber of audience, where he had the fatisfaction of beholding the fol. lowing pleafant fcene. The count feated in his elbow chair, gave the fignal of his being ready for the important bufinels, when, preceded by a page, with a cloth on his arm, and a drinking-glass, one of hir principal domestics appeared, who presented a filver salver, with many little pieces of bread, elegantly diposed; he was immediately follow ed by the first cook, who, on another falver, had a number of fmill veffels, filled with fo many different kinds of gravy. His excellent then tucking his napkin into he cravat, first washed and gargled his mouth, and having wiped it, dipped'a piece of bread in each kind of fauce, and having tafted with much deliberation, frincing his palate (to avoid confusion) after every piece, at length with inexpressible fagacity decided as to the destination of them all. These grand instrument of luxury, with their attendants, then were difmiffed, and the lon expected minister having fully difcuffed this interesting affair, found himself at liberty to discharge next the duties of his political function.

xercile,

Authentick conversation between the king of Pruffia and the ingenious Mr. Gellert, professor in Belles Lettres at Leipfick ; extratted from a letter dated, Leipfick, January 27, 1761.

THE 18th of October laft, about three o'clock in the afternoon, while professor Gellert was fitting in his nightgown at his delk, much out of order, he heard fome body knock at his door,-" Pray, Sir, walk in, Sir, your fervant, my name is Quintus Icilius, and I am extremely glad to have the pleasure of forming an acquaintance with one fo famous in the republic of letten. I am not, however, come here in my own name only, but in that of his Pruffian majesty, who defires to fee you, and has commanded me to conduct you to him." After fome excuses sounded on his ill health, M. Gellert accompanied major Quintus, who introduced him into the apartment of his majefty, where the following conversation was carried on, by the king and the . himself at liberty to different owt

G. Yes, Sire. " A certain painter of Athens, who exercised his art with a view to reputation rather than from the love of gain, addressed himself to a connoisseur for his opinice of one of his pictures, which represented the god Mars. The connoisseur could not dissemble ; he found the piece defective; he objected particularly the too great appearance of art that reigned through the whole. The painter defended his work with all the warmth of an inordinate felf-love; the critic answered his arguments, but without producing conviction. In the mean time arrives a coxcomb, who casts an eye upon the picture, and without giving himself a moment's time to reflect, cries out in a rapture, Gods! what a master-piece! Mars lives, breathes, terrifies in that admirable production. Observe those feet, those nails ! What taste, what an air of grandeur in the helmet, the hield, and in the whole armour of the terrible deity! The painter blushed, beheld the true connoisseur with a look that fpoke confesion and conviction; and faid to him, I am now perfuaded that your judgment is well founded. The coxcomb retired, and the picture was prevents my feeing it with health

K. Now for the moral. bas 3979 G. It is this: 101 When the prom dections of an author do not fatisfy a good judge, this is a strong pre-

fumption against them; but when they are extolled by a blockhead, then it is high time to commit them to the flames."

K. Excellent, Mr. Gellert! The piece is admirable; and there is fomething elegant in the construction of this fable. I can perceive the force and beauty of this compofition. But when Gottsched read to me his translation of Lphigenia, I had before me the French original, and did not understand a word of what he read. If I stay here some time, you must come and see me often, and read me fome of your fables.

G. I don't know, Sire, if I may venture to read, as I have acquired by habit that finging tone of voice which is common in our mountains.

K. Aye, like that of the Silefians. You must, however, read your sables yourfelf, otherwise they will lose, Return foon hither, nov 213W

When Mr. Gellert was gone, the king faid, "This is quite another man than Gottsched;" and the day following, he faid at table, that " Of all the learned Germans, Gellert was the most rational and judicious." of noitsetioni doum of 1908

I fuppele it is tin Some account of the late Richard C. Best 19/3 melour ma eft

dear kind of licksels are you

R Ichard Nath, Eq; or as he is commonly called Beau Nath, the subject of this memoir, was born in the town of Swanley, in Glamorganthire, on the 18th of October. 1674. His father's principal income arose from a partnership in a glass-house; his mother was niece to colonel Poyer, who was killed by Oliver Cromwell for defending D 3

Pembroke caftle against the rebels. Nash himself was educated under Mr. Maddocksat Caermarthen school, and from thence fent to felus college, in Oxford, to prepare him for

the fludy of the law.

The first method Mr. Nash took to diftinguish himself at college was not by application to fludy, but by affidulty in intrigue. In the neighbourhood of every university there are girls, who with fome beauty, more coquetry, and little fortune, lie upon the watch for every raw amorous youth. Our hero was quickly caught, and went thro' all the mazes and adventures of a college intrigue, before he was 17; he offered marriage, the offer was accepted, but the affair coming to the knowledge of his tutor, he was fent home, with proper instructions, to his father.

Mr. Nalh having thus quitted college, bought him a pair of colours, and entered into the army, but still continuing his intrigues, and finding that the profits of his commission would not enable him to support his expences, he exchanged the military life for the fludy of the law, and accordingly entered h's name in the Temple books. Here he went to the very fummit of second-rate luxury. Though very poor he was very fine, he spread the little gold he had in the most oftentatious manner, and though the gilding was but thin, he laid it

on as far as it would go.

In those days it was customary
for the inns of court to entertain every monarch, on their accession to the throne, with a pageant. King William, the last to whom this honour was exhibited, was then just come to the crown. Mr. Nash was appointed to conduct the ceremony, which he discharged so much to the fatisfaction of his majesty, that he offered him knighthood. " Please your majesty (replyed Nah) if you intend to make me a knight, I wish it may be one of your poor knights of Windfor, and then I hall have a fortune at least able to fun. port the title." We do not find, however, that the king took the hint, he had numbers to oblige, and never cared to give money without

adequate fervices.

But though Nash acquired no riches by his late office, he gained many friends. With thefe he converfed with the greatest familiarity, and his generofity and benevolence already began to shew themselves amidst all his poverty. An instance of this kind is told us about this time, which does him no fmall honour. When he was to give in his accounts to the mafter of the temple, among other articles, he charged, " For making one man happy to 1." Being questioned about the meaning of fo strange an item, he frankly declared, that happening to over-hear a poor man tell his wife and a large family of children, that 101. would make him happy, he could not avoid trying the experiment, adding, that if they did not choose to acquiesce in his charge, he was ready to refund the money. The mafter, ftruck with fuch an uncommon inflance of good nature, publickly thanked him, and defired that the fum might be doubled as a proof of their fatisfattion. This fact is recorded in the Spectator, though without a name.

On the other hand we are told, that while the poor bleffed his chirity and munificence, his creditors complained with great reason of his injuffice; and amongst other flories

related of him to this purpose, is one which informs us of a friend's not being able to procure a just debt of him, but by the employing another person to borrow a sum of Nash to the amount. The person obeyed, and readily obtained that from Nash's generosity, which the other had often implored in vain from his justice.

His

ories ated

Our hero being now thirty years old, without a fortune, or talents to procure one, and being entered befides into a life of gaiety, commenced gamester. In this profession he experienced all the vicifitudes which attend that course of life, being fometimes in affluence, and at other times reduced to the lowest ebb of poverty. His profession naturally drew him down to Bath, the waters of which began then to be in repute. Captain Webster, his predecessor in office, dying about the same time, Nash found means to succeed him, and by the regulations he introduced both there and at Tunbridge, foon became the favourite of all the rich and great who frequented those places of public pleasure. These presented him with boxes and many other valuable testimonies of their favour, but the principal honour he received in this respect was from the late prince of Wales and the prince of Orange, to the memory of each of whom he has raised a column. A fuit in chancery, however, which he imprudently commenced afterwards against the keepers of the gamingtables there and at Tunbridge, contributed not a little to lessen his reputation, as it shewed him to be intimately connected with a very infamous fet of people; but fill continuing his protection to the innocent and his friendship to all who food in need of it, he maintained

his post as supreme arbiter of all their pleasures, to the very day of his death.

Some time before his deceale, we are told, his temper became fo changed through age and poverty, that he grew very affronting, peevish and disgustful. This gave encouragement, as is faid, to a gentleman, who trod the stage for many years with reputation, to endeavour to supplant him in his place. be this as it will, Nash still preserved his power, and the corporation of Bath, in gratitude for the great benefits derived from him to the city, allowed him a pension of fix score guineas a year, which was paid him by ten guineas at a time, on the first Monday in every month. This, with the fale of his fnuff-boxes, and other trinkets, enabled him to lead out a lingering life, which he was very defirous to have made longer, till the 3d of February, 1761, when he died fincerely regretted by that city, to which he had been a great benefactor, aged eighty-feven years, three months, and some days.

His funeral was performed with all the pomp and folemnity the place could afford, and his epitaph was written both in Latin and English by some of the first geniuses of the age. Two of the best of these are given us in the volume which contains his memoirs. [See our last volume.]

As to his abilities we are told, that he was not without good fenle, though he employed it on trifles; and as he was always aiming at laying good things, he now and then had the fortune to fucceed. A fpecimen of his wit is given us in a reply to Dr. Cheyne, who, having prescribed for him, and asking him the next day, if he had followed D

his prefeription, "No. (fays he) for if I had, I should have broke my neck, for I threw it out of the two-pair-of ftairs window." Much better were the bon-mots that were played off against him. Telling a noble earl, one day, that he had loft five hundred pounds at cards, " Is it not furprifing, (faid he) that fortune should always serve me fo?" " Not at all (replied the earl) it cannot be furprising that you should lose your money; but all the world is jurprifed where you get money to lofe."

His conversation, like his life, was trifling, and ffrongly tinclured with vanity, braggade, and impertinence. Of this we have a specimen or two in some of those stories which, the writer of his life tells us, he used to be continually repeating towards the latter end of his life. But, with all his faults, it must be owned, that he was not without good qualities; and the many instances of his unbounded charity and benevolence, with the means that he contrived to put the pleafures of the rich under some regulation, ought to ferve as a veil to those follies of which his life was He feemeth to clipt dot and

A Sport Character of his Excellency Thomas, Earl of Wharton, Lord Lieutenant of Ireland, By Dr. ore owing to the frequency fiund

London, Aug. 30, 171 1710. HE kingdom of Ireland being governed by deputation from its annals, fince the English establishment, are usually digested under the heads of the feveral governors: but the affairs and events of that illand, for some years past,

tage of England.

Generally speaking, the times which afford most plentiful matter for flory, are those in which a man would leaft chuse to live; such a under the various events and revolutions of war, the intrigues of a ruined faction, or the violence of a prevailing one; and laftly, the arbitrary, unlawful acts of oppressing governors. In the war, Ireland hath no share, but in subordination to us: the fame may be faid of their factions, which, at present, are but imperfect transcripts of ours. But the third subject for history, which is arbitrary power, and oppression; as it is that by which the people of Ireland have, for fome time, been diftinguished from all her majesty's subjects, so being now at its greatest height, under his excellency Thomas earl of Wharton, a short account of his government may be of fome use or entertainment to the present age, although, I hope, it will be incredible to the next; and, because this account may be judged rather an history of his excellency than of his government, I meft here declare,

declare, that I have not the leaft view to his person in any part of it. I have had the honour of much convertation with his lordfhip, and am thoroughly convinced how indifferent he is to applaufe, and how infensible of reproach; which is not a humour put on to ferve a turn, or keep a countenance, nor arising from the consciousness of innocence, or any grandeur of mind, but the mere unaffected bent of his na-

clare,

He is without the fense of shame or glory, as some men are without the fense of fmelling; and, therefore, a good name to him is no more than a precious ointment would be to these. Whoever, for the fake of others, were to describe the nature of a ferpent, a wolf, a crocodile, or a fox, must be underflood to do it without any personal love or hatred for the animals themtelves. the intrigues . sevi

In the same manner, his excellency is one whom I neither perfonally love nor hate. I fee him at court, at his own house, and sometimes at mine, (for I have the honour of his vifits) and when thefe papers are public, it is odds but he will tell me, as he once did upon a like occasion, that he is damnably manled; and then, with the eafielt transition in the world, ask about the weather, or time of the day: to that I enter on the work with more chearfulness, because I am fure neither to make him angry, nor any way hurt his reputation; a pitch of happinels and fecurity to which his excellency hath arrived, and which no philosopher before in could reach? or eldiperont so ill

Intend to execute this perform-

fome facts during his governm which will ferve to confirm it. " 10

I know very well, that mens characters are best known from their actions; but thefe being confined to his administration in Ireland, his character may, perhaps, take in fomething more, which the narrowness of the time, or the scene, hath not given him opportunity to exert.

Thomas, earl of Wharton, lord lieutenant of Ireland, by the force of a wonderful constitution, paffed fome years, his grand climacteric, without any visible effects of old age, either on his body or his mind; and, in spite of a continual proffitution to those vices which usually wear out both, his behaviour is in all the forms of a young man at five and twenty. Whether he walketh, or whiftleth, or sweareth, or talketh bawdy, or calleth names, he acquitteth himfelf in each beyond a Templar of three years standing. With the fame grace and in the fame fine, he will rattle his coachman in the middle of the street, where he is governor of the kingdom; and all this is without consequence, because it is in his character, and what every body expecteth. He feemeth to be but an ill dissembler, and an ill liar, although they are the two talents he most practiseth, and most valueth himself upon. The ends he hath gained by lying appeared to be more owing to the frequency, than the art of them; his lies being fometimes detected in an hour, often in a day, and always in a week. He tells them freely in mixed companies, although he knows half of those that hear him to be his enemies, and is fure they will discover ance by first giving a character of them the moment they leave him. his excellency, and then relating He tweateth folentely he foveth.

d will ferve you; and your back in no fooner turned, but he tells shole about him you are a dog and a raical. He goeth constantly to prayers in the forms of his place, nd will talk bawdy and blasphemy at the chapel door. He is a prefbyterian in politics, and an atheift nireligion; but he chuseth at prefoot to whore with a papift. In his commerce with mankind his general rule is, to endeavour to impose on their understanding, for which he hath but one receipt, a composition of lies and oaths: and this he applieth indifferently to a freeholder of forty shillings, and a privy counfellor; by which the easy and the honest are often either deceived or amused, and either way he gaineth his point. He will openly take eway your employment to-day, because you are not of his party; tomorrow he will meet or fend for you, as if nothing at all had passed, lay his hands with much friendship on your shoulders, and, with the greatest case and familiarity, tell you that the faction are driving at fomething in the house; that you must be fure to attend, and to speak to all your friends to be there, although he knoweth at the fame time, that you and your friends are against him in the very point he mentioneth : and, however abfurd, ridiculous, and gross this may appear, he hath often found it fucceleful; fome men having fuch an aukward bashfulness, they know not how to refuse on a sudden, and every man having fomething to hope or fear, which often hinders them from driving things to extremes with persons of power, whatever provocations they may have reseived He hath funk his fortune by endeavouring to ruin one king-

dom [England], and hath railie by going far in the ruin of another [Iseland.] With a good name understanding, a great fluency Speaking, and no ill tafte of with is generally the worst companion in the world; his thoughts being wholly taken up between vice an politics, fo that bawdy, prophase ness, and business, fill up his whole conversation. To gratify himi in the two first, he maketh use d fuitable favourites, whose tales reach no higher than to entertain him with all the lewdness that pass eth in town. As for business, he's faid to be very dextrous at that part of it which turneth upon intrigue; and he feemeth to have transferred those talents of his youth, for intriguing with women, into public affairs. For as some vain young fellows, to make a gallantry appear of consequence, will chuse to venture their necks by climbing up a wall or window at midnight to a common wench, where they might as freely have gone in at the door, and at noon-day; fo his excellency, either to keep himself in practice, or advance the fame of his politica affects the most obscure, trouble fome, and winding paths, even # the most common affairs, those which would be brought about a well in the ordinary forms, or would follow of course, whether he intervened or not.

He was never yet known to refuse or keep a promise. But here I desire to distinguish between a promise and a bargain; for he will be sure to keep the latter when he has the fairest offer.

An account of the death of Oliver Crowwell, and the fuccession of his fon Richard to the protestorship; as first published by authority.

HIS most serene and renowned highness Oliver, lord protector, being, after a sickness of about sourteen days (which appeared an ague in the beginning) reduced to a very low condition of body, began early this morning to draw near the gates of death; and it pleased God, about three o'clock in the afternoon, to put a period to his life.

We would willingly express, on this sad occasion, the deep forrow which hath possessed the minds of his most noble son and successor, and other dearest relations, had we language sufficient: but all that we can use will fall short of the merits of that most excellent prince.

His first undertakings for the

all along, as it were out of the rock ; his founding a military difcipline in these nations, such as is not to be found in any example of preceding times; and whereby the noble foldiers of these nations may, without flattery, be commended for piety, moderation, and obedience, as a pattern to be imitated, but hardly to be equalled by fucceeding generations: his wisdom and piety in things divine; his prudence in management of civil affairs, and conduct of military, and admirable successes in all, made him a prince indeed among the people of God; by whose prayers being lifted up to the supreme dignity, he became more highly feated in their hearts, because, in all his actings, it was evident that the main defign was to make his own interest one and the fame with theirs, that it might be subservient to the great interest of lefus Chrift. a ta gamton it as woy

And in the promoting of this, his spirits knew no bounds; his affection could not be confined at home, but broke forth into foreign parts, where he was universally admired by good men, as an extraordinary perion raised up of God; and by them owned as the protector and patron of the evangelical prefession. This being faid, and the world itself witness of it, we can only add, that God gave him bleffings proportionable to all thele virtues, and made him a bleffing to us; by his wisdom and valour, to fecure our peace and liberty, and to revive the ancient renown and reputation of our native country."

After all this, it is remarkable how it pleafed the Lord, on this day, to take him to rest, it having formerly been a day of labour to him; for which both himself and

the

the day (September 3) will be most according to law t which worthy renowned to posterity; it having been to him a day of wiumphs and thankfeiving for the memorable victories of Dunbar and Worcester : a day which, after fo many strange revolutions of Providence, high contradictions, and wicked conspiracies so it is but answerable to the work of unreasonable men, he lived once again to fee; and then to die with great affurances and ferenity of mind, peaceably in his bed.

Thus, it hath proved to him to be a day of triumph, indeed; there other noble inclinations, hath obliged being much of Providence in it, that, after so glorious crowns of victory, placed on his head by God, on this day, having neglected an earthly crown, he should now go to receive the crown of ever-

cmarkable Speech of Richard Cromwell to his Parliament.

S this speech is curious in itself, and not to be met with in any f the common or general histories England, we imagine the perusal f it will not be disagreeable. The ble is perfectly puritanical; but, as tichard was never accused of hyocrify, had no share in the crimes, f his father, and ever led an innoent life, the language appears not fo ridiculous a light, as when rocceding from the mouth of a nan, the whole tenor of whose acions contradicted and belied his rords, The terms in which he peaks of his father, though it is teedless to mention they are in the ighest degree false and flattering, re no other than could be expected from him on fuch an occasion, at ich a juncture, and to fuch an aulience. The oration was as folows;

" My Lords and Gentlemen,

"I believe there are scarce any of you here, who expected, some months since, to have seen this great assembly, at this time, in this place, in peace; considering the great and unexpected change, which thath pleased the all-disposing hand of God to make in the midst of us: I can assure you, that is things had been according to our memies, it had not been thus with us; and, therefore, it will become both you and me, in the first place, as to reverence and adore the great God, possessor of heaven and earth,

in whose hands our breath is, and whose are all our ways, because of his judgments) so as to acknowledge him in his goodness to these lands, in that he hath not added forrow to forrow, and made the period of his late highness's life, and that of the nation's peace, to have been in one day.

Peace was one of the bleffings of my father's government; a mercy after so long a civil war, and in the midst of so great division which that war bred, is not usually afforded by God unto a people in so great a measure.

The Cause of God and these nations, which the late protector was engaged in, met, in all the parts of it, as you well know, with many enemies and great opposition; the archers, privily and openly, forely grieved him, and shot at him; yet his bow abode in strength, and the arms of his hands were made strong by the hands of the mighty God of Jacob.

As to himself; he died full of days, spent in fore and great travail; yet his eyes were not waxed dim, neither was his natural strength abated; as it was said of Moles, he was serviceable even to the last.

of you here, who expected, some As to these nations, he less them months since, to have seen this in great honour abroad, and in full peace at home: all England, Scotlace, in peace; considering the land, and Ireland, dwelling safely, reat and unexpected change, which thath pleased the all-disposing der his significant to land of God to make in the midst.

of ut: I can affure you, that if

He is gone to rest, and we are entered into his labours; and, if

the bun fears, and the hopes of our the Lord hath still a blessing for these that the lands, (as I trust he hath)

is and, therefore, it will become as our peace hath been lengtheoth you and me, in the first place, ened out to this day, to shall we as to reverence and adore the great go on to reap the fruit, and ga
God, possessor our to the day, to shall we are the harvests of what his late.

high-

od phial phas awol i dad i alendald

For my owe part, being, by the Providence of God, and the difpofition of the law, my father's incseffor, and bearing that place in the
government that I do, I thought it
for the public good to call a parliament of the three nations, now
united, and conjoined together in
one commonwealth, under one gowernment.

tis agreeable, not only to my aruft, but to my principles, to goween these nations by the advice of my two houses of parliament. I find it inferted in the humble petition and advice (which is the corner stone of this building, and that which I shall adhere to) "That parliaments are the great council of e chief magistrate, in whose advice both he and thefe nations may be both fafe and happy." I can affure you, I have that effeem of shem and, as I have made it the first act of my government to call you together fo I shall further let you fee the value I have of you, by

the answers I shall return to the advice that shall be given me by pa for the good of these nations.

You are come up from your faveral countries, as the heads of your tribes, and with hearts (I perfuade myself) to consult together for their good: I can fay, I men you with the fame defires, having nothing in my design, but the maintenance of the peace, law, and liberties, both civil and christian, of these nations; which I shall always make the measure and in ready to spend my life for.

We have fummoned you up a this time, to let you know the fire of our affairs, and to have your advice in them: and I believe a puliament was never fummoned upon a more important occasion.

It is true, as I told you, we are, through the goodness of God, as this time at peace; but it is not thus with us because we have so enemies: no, there are enough both within us and without us, who would soon put an end to our

This puts one in mind of an anecdote related by M. de Voltaire. And Richard had quited the protectorship he made a voyage to France, where being one day at Montpelier, the prince of Conti, brother of the great Conds, discoursing with him, without knowing who he was, observed, "That Office Cromwell was a great man, but that his son Richard was a poor wretch, as to know how to enjoy the fraits of his father's crimes." This Richard, however, M. Voltaire remarks, lived contented, whereas his father had near known what happiness was. The genius of Richard was wholly different from that of Oliver; he was possessed of all the meek virtues, which make the god citizen, and had none of that bratal intrepidity, which sacrifices every thing to its own interests. He might have preserved the inheritance which his father had acquired by his labours, if he would have consented to put to death threat four of the principal officers of the army, who opposed his elevation; but he chole rather to say down the government, than to reign by assissation; he will be had once been the sourcing; having, in his own person, exhibits a friking proof; that the sate of a kingdom frequently depends upon the day racter of one man, Translation of Voltaire; Warks, by Dr. Smollett, and almost voltaire. Warks, by Dr. Smollett, and almost voltaire. Warks, by Dr. Smollett, and almost voltaire.

S.

This I can affure you, that the rmies of England, Scotland, and reland, are true and faithful to the ace and good interest of these nanions; and it will be found fo: and that they are a confishent body, and uleful for any good ends; and they were not the very best army in the world, you would have heard of many inconveniences, by reason of the great arrear of pay, which is now due unto them, whereby some of them are reduced to great necessities : but you shall have a particular account of their arrears; and I doubt not but confideration will be had thereupon, in fome speedy and effectual way. And this being matter of money, I recommend it particularly to the house of commons.

You have, you know, a war with Spain, carried on by the advice of parliament; he is an old enemy, and a potent one, and therefore it will be necessary, both for the honour and fafety of thefe nations, that war be vigoroufly profecuted:111

Furthermore, the confitution of fairs in all our neighbour countries, and round about us (as well friends as enemies) is very confiderable; and calls upon us to be upon our guard, both at land and and interest.

preparing to be fet forth into those feas, and confiderable armies of fea veral nations and kings are now disputing for the mastery of the Sound, with the adjacent islands and countries; among which is the emperor of Germany, and other popish states. I need not tell you of what confequence these things are to this flate 10 dos bas batters

We have already interpoled in thefe affairs, in fuch a manner as we found it necessary for the intereft of England; and matters are yet in fuch a condition in those parts, that the state may, with the affiflance of God, provide that their differences may not prejudice

The other things that are to be faid, I shall refer to the lord-keeper Fiennes; and close up what I have to fay, with only adding two or three particulars to what I have already faid. affure you, I have at

And, first, I recommend to your care, the people of God in thefe nations, with their concernments: the more they are divided among themselves, the greater prudence should be used to cement them.

Secondly, The good and necesfary work of reformation, both in manners, and in the administration of justice, that profaneness may be discountenanced and suppressed; and that righteonfacts and justice may be executed in the land.

Thirdly, I recommend to you the Protestant cause abroad, which icems, at this time, to be in some danger, having great and powerful enemies, and very few friends; and I hope, and believe, that the Old fa; and to be in a posture able to Buglish zeal to that cause is still acter of one man. Trayen Ageoms wash awo no evidence bushing

Laftly, My lords, and you gen-Great and powerful fleets are tlemen of the house of commons,

That

That you will, in all your debates; maintain and conferve love and unity among yourselves; that therein you may be the pattern of the nation, who have sent you up in peace, and with their prayers, that the spirit of wisdom and peace may be among you; and this shall also be my prayer for you. And to this let us all add our utmost endeawours for the making this an happy parliament."

[Whoever penned this Speech, it was allowed to be a very handsome and fensible one by all, and far exceeded that which followed of the

their differences when not very coate

lord keeper Fiennes.

A short view of the character and writings of M. de Voltaire; taken from a Brench pamphlet published at Utrecht, under the title of Critical Reflections upon the Article GENEVA in the Encyclopedie, in some letters from an English gentleman on his travels to a noble lord.

THE article in question, which was composed by Mons. D' Alembert, tho' it be in many refpects extremely honourable to the city of Geneva, is yet highly injurious to the whole body of its clergy, a clergy whose sentiments, morals, and tafte, de honour to their profession. In this article their moderation is represented as indifference; and their rational manner of treating the sublime mysteries and doctrines of christianity as focinianism, nay, as a kind of deifm, and that whom? by M. D'Alembert, whose attachment to christianity is

tale In .

more than doubtful, notwithfland fome mean professions he has lately made to appeale a bigoted and perfecuting church in the last editional his Philosophical and Literary Mile cellany. The truth of the matteries there is at present a club of pretend. ed fages, who by way of eminence call themfolves philosophers, feen to have formed a fort of confeder racy against the cause of christianity. and are not a little anxious about making profelytes, that they may acquire weight by the number of their adherents. For this purpose they pretend to have fecret as well as open friends, and are willing to dye with the colour of their feet, a many as they can conveniently Voltaire, who in genius, and in abuse of genius, in exuberance of talent and want of principle, is this day one of the first men in Europe, is justly to be suspected to be one of these pretended philosophers, and he is thus represented in the letter above mentioned.

"Cast your eye, my lord, upon monfienr de Voltaire, who is looked upon as the Coryphaus of these phiolophers; or rather permit me to give you a just, though general idea of his character and writings. He has undoubtedly been enriched by nature with a very confiderable degree of genius and understanding; but has received with them such an ungovernable imagination, fuch impetuous passions, and such a reflefs temper, as have, in many cale, destroyed their natural effects, and perverted their application to the worlt purpoles. His principal to lent is poetry. His profe, however, is highly and juftly effeemed, and is, not without reason, sup poled

nning after antithefes and epirammatical points. His convernion is full of lively strokes of wit, nd rendered interesting by a great mber of agreeable anecdotes, which he has collected from a long ntercourse with persons of the first iffinction. All this is proper to form a wit; but in what light will e appear, if we confider him as a bilosopher ?

The period, in which he first ame forth to public view, was certainly dangerous to unguarded inocence and virtue. It was under he regency of Philip, duke of Oreans, a period of luxury, licentousness, and irreligion, in which a Epicureanism, much worse than that of Epicurus, reigned, and gave atone to the principles and manners of the times, that Monf. de Voltaire made his appearance in the world. It was pretty much fach a period as the reign of Charles Il. in our island, when courtiers and poets, tired of the bigotry, hypocrify, and fanaticism, that had extended their gloomy reign during the republic, ran headlong into the opposite extreme of atheism and feestuality, when they had got a libertine monarch at their head. And it is remarkable enough, that the religious disputes of Jansenists and Jesuits in France, about the Conflictation, were followed with the same effects in France under the regency of Philip, that focceeded the debates about Episcopacy and Preftenamim, under the reign of Charles. Monfieur Arromet (for fo Voltaire was originally named) was born, in the midst of the disputes Vol. V.

aled to equal his poetic style in abovementioned, of parents who lerance and facility; though he were Jansenists; and perceiving. s been reproached by fome with among the disputants on both fides. much animofity, artifice, and mifguided zeal, he, as many abfurdly do, conceived a disgust at religion in general, and contracted an early habit of pointing his fatirical wit and pleasantry against that respectable object. His connections with the late lord Bolingbroke confirmed him in this unreasonable and perverse habit, and wholly corrupted his taste and judgment, with respect to religious matters. He feems to have adopted all the ideas of that incoherent noble author, though he has difguifed them much more than Bolingbroke did, and has expressed them with much less energy, eloquence, and ingenuity. Nothing less would fatisfy Voltaire's ambition than the glory of adding to his fame, as a poet, the reputation of a profound philosopher, and an eminent historian; though in these two latter characters he is no more than Superficial. The Henriade, The Life of Charles the Twelfth, some tragedies, and several pieces of poetry and literature, are, in my opinion, the only pretentions he can plead to the character of an eminent author; and it must be confessed, that these productions are sufficient to establish a shining reputation. His Essay on Universal History, though it contains several agreeable anecdotes, and some curious relations, is yet a very indifferent performance, pregnant with glaring fallhoods and wil ful mifreprelentations of facts; of which an attentive reader will find examples in every page. It re-fembles a gallery of historical pictures, in which the painter has followed more the excursions

his fancy, private fentiments, and particular views, than the dictates of nature or the truth of things.

It is more particularly observable, that this pretended historian never indulges his romantic vein with reater complacence, than when the history of religion, or the affairs of the church, come in his way; nay, he often goes out of his way, in order to disfigure them, and to fet christianity and its ministers in a ridiculous or odious point of light. His philosophical performances are generally acknowledged to be fuperficial and inaccurate. He tried his talent in that way upon the philolophy of Sir Isaac Newton, with a view to obtain a place in the Academy of Sciences. But this project failed; for his book was despised, and he was denied admission into that learned body. The vivacity of his fancy renders him inconfiderate and imprudent beyond all expref-Were he really the author of that impious, obscene, and cynical poem, intitled the Maid of Orleans, this mast be sufficient to render him infamous, in the opinion of all fuch as have any fense of decency left; but he has denied that the impieties that dishonour this work slowed from his pen. He is always talking of reason, humanity, forbearance, and mildness he is always lamenting the indecent quarrels and animofities that prevail too much among men of learning; and perhaps no man living acts more in opposition to these pompous profesfions. He has composed an agreeable and witty chapter concerning printed Lies, and no author certainly has printed more than he himfelf."

Such are the principal strokes in the character, which the sensible author of the Letters abovementioned gives of Mons. de Voltaire. Thee, however, are but scattered and inperfect hints, which relate but we very small part of the writings and character of that poet. I therefore hope to give you, some time hence, a more full, extensive, and circumstantial account of the life, character, transactions, and writings of that mixed man.

An original Letter from the Dukes Buckingham to King James I.

Dear Dad and Goffip,

As necessity inforces me, instead of repairing to you, according to your command, and my promise, to go many miles from you another way, and consequently from myself, all my perfect joys and pleasure chiefly, nay solely; consisting in attending your person; so, methinks, duty and good manners command me, on the other part, to give you an account under my own hand, though it be yet something unsteady and weak.

But before I give the reasons of the change of my former refolutions, there is a thing not much in exercise now in the world, called thankfulness, that calls so fast and earnestly upon me, that I must first, though I have already done it by the affiftance of a young gentleman, called Babie Charles, whom you likewise, by your good offices, made my friend, who, without doubt, hath already perfectlier made my thanks, than I shall myself; yes, having the pen in my hand, I mult needs tell you what I observe in your late absent and public favour, but ancient manner of obliging your poor unworthy fervant, whereby I

Give me leave here to use your own proverb; " for this the devil con me thanks." The reason of. my going to Newhall are thefe: first, I find business, and the fight of buly folks does me much harm; and though your extraordinary care and watchful eye over me, would keep them from fpeaking with me, yet, in a court, I must needs look many of them in the face; then Theobald's house is now very hot, and hath but few change of rooms, both inconvenient to a fick body; then my lord of Warwick tells me, that, by experience, he hath found Newhall air as good a one to ride away an ague, as any in England, and that lately he loft one by the benefit of that air; I mean near hand, which I think will be all one. By this time, I fear I have troubled

you, and were it not that I write to you, I am fure I should have wearied myself. I have now only one request to you, as you first placed me in your Babie Charles's good opinion, if you think fit, for your service, in my absence continue me in it; and so give me your blessing.

Your Majesty's

Most humble slave and dog,

STINIE.

Some Account of a very extraordinary Clergyman. From Mr. Morrice's Memoirs of the first Earl of Orrery.

UPON the ruin of the royal family, and the death of the king, his lordship retired to Marston, his feat in England, which his father had bought of Sir John Hippisley, and which was formerly part of Edmund earl of Cornwall's estate.

I have heard him repeat a remarkable incident that happened during his residence there; which, as it will shew the distress of the royal party in those days, may perhaps be acceptable to the curious.

The parish church of Marston is very near to the Mansion-house: lord Orrery never failed to go thither on a Sunday; but one Sunday, having fat there fome time, and being disappointed of the then qualified minister, his lordship was preparing to return home, when his fervants told him a'person in the church offered to preach. His lordship, though he looked upon the proposal only as a piece of enthufialm, gave permission; and was never more surprised or delighted than with the fermon, which was filled with learning, fense, and pie-

ty. His lordship would not suffer the preacher to escape unknown, but invited him to dinner; and enquiring of him his name, life, and fortune, received this answer: "My lord, my name is Afberry; I am a clergyman of the church of England, and a loyal subject to the king: I have lived three years in a poor cottage under your warrenwall, within a few paces of your lordfhip's house. My son lives with me, and we read and dig by turns. I have a little money, and some few books, and I submit chearfully to the will of Providence."

This worthy and learned man (for fuch lord Orrery always called him) died at Marston some years after; but not till his lordship he obtained an allowance of 30 l. per ann. for him, without any obligation of taking the covenant.—Thus see Mr. Morrice.

As a memorial of the above transaction, the poor cottage in which Mr. Afberry lived, with a little garden adjoining to it, is still kept up in its old form by the present earl of Cork and Orrery, being taken into his gardens; and the two rooms of which it confists, viz. a kitchen and a chamber, are furnished as much a possible in the taste of those times, and with all forts of useful furniture, and books, prints, &c. of equal antiquity.

NATURAL HISTORY.

commente callings qua-

If has been often observed by naturalists, that the bellies of salmons are always found empty, and many attempts have been made to assign the cause of it. The following is a letter to a friend on the subject, by a gentleman who resides at Berwick, war the great salmon subbery.

To Mr. Peter Collinson.

DEAR SIR,

garup

rlof

into

s of

and

h 25

nes,

rni-

qual

I Have made what enquiry I could concerning the falmon, but I find that people who have the best opportunities, are not always the most curious in improving them. The fact you mentioned, was confirmed to me; some added, the salmon must live upon water, but I cannot well admit this, because though they are generally caught in long nets, yet they are fometimes caught with a tod, and artificial fly. I cannot fee how falmon should rife at an artificial fly, unless they were accustomed to catch at natural ones. I believe they are sometimes caught with bait also, which if it be so, must, I apprehend, direct to another species of their food; all that I have enquired of, agree, that the stomach of the falmon is remarkably small. I apprehend therefore that they are not voracious, for as all voracious animals are apt at times to gorge themselves to an incredible degree, and, at others, to fuffer abstinence, for a surprising time, it is probable, their flomachs must be proportion-

ably large, and fitted to retain the aliments a confiderable time; on the other hand, creatures who are of a different nature, and have very fmall stomachs, will require frequent supplies of food, as they can receive it but in small quantities, and it will pass quickly through their stomach; now as the stomachs of these animals will be more frequently empty than those of the voracious ones, it will be more difficult to find any thing in them when killed. You fee, that according to my hypothesis, the salmon ought not to be capable of keeping a long fast; yet their stomachs being always found empty, is a furprizing phenomenon. Some queries I think are necessary to be refolved, in order to explain it; as, what quantity of food will the stomach of the falmon receive and retain at a time? what time does this food take in digestion and passing through the Romach? what is the interval between the falmon's being caught either in a net or upon a hook, and its death? Is this interval fufficient for the digestion and passage of such a quantity of food as its stomach is capable of receiving at a time? If this last query could be answered in the affirmative, it would account for the phenomenon, but the interval between their being caught and their death, must vary according to circumstances. The falmon certainly retire to the fea, and return to the fresh waters alternately;

nately; it is also certain, I believe, that they feek the rivers for the fake of spawning. I doubt whether they have any certain fealons of going and returning; I am rather inclined to think, that some may be returning while others are only coming up; however, in general, the summer is the season of their coming up from the fea; of course, the winter must be the season of their return to it : from the 30th of September to November 30, is what we call close time, when fishing is forbidden here, it being supposed the feason of the salmon's spawning, when it is not lawful to difturb them. According to this regulation, it is supposed, that the salmon have done spawning, and are returned to the sea by the end of November. It is allowed, that the falmon are fatter and better at their return from fea, than after they have lain any time in the fresh water; of course, the salmon ought to be caught only in their return from the fea; the falmon caught in winter are far inferior to those caught in summer. I suspect they are caught in their return to fea. By the latter end of April, or beginning of May, they begin to return in confiderable quantities, and keep coming up all the fummer. In great droughts, the falmon are always very scarce, they do not chuse to take river till we have fome land-floods; when the river is a little discoloured with a gentle flood, they come up in surprising quantities. Is not the bait or land flies, which the flood washes into the river on these occasions, what tempts the falmon to take the river at that time ? It cannot be the increased depth of water, for they have plenty of water for many miles above Berwick in the fevereft

droughts, yet they will keep play. ing and hovering just off the moun of the river, till a land-flood hap. pens; in a great flood they do no come up fo fast; on these occasions, when the flood has abated a little. the falmon come up. I apprehend that the stream at such times, is too violent for them during the strength of the flood.

It

Berwick, August 8. Yours, &c. To this letter I shall only add the fol-

lowing remarks. Mects, in general, leave off eat-

ing when near laying their eggs, or changing their form. The moth of the filk-worm engenders and lays eggs, but never eats.

When falmon are near spawning they may perhaps grow fick, and subfift for a time on animalcula, with which all waters abound.

It is highly probable, by their waiting for land-floods, that fome fort of sustenance is brought down, but whatever it is, it's quickly digested, or else it would be found in their stomachs when they are caught.

Some account of the animal fent from the East Indies by general Clive, to his royal highness the duke of Cumberland, which is now in the Tower of London: In a letter from James Parsons, M. D. F. R. S. to the Rev. Tho. Birch, D. D. Secretary to the Royal Society. From the Phil. Trans.

AT the request of the Rev. Dr Littleton, dean of Exeter, went to observe this creature, in or der to find what class of animals h belonged to; and made the draw ing now before the Royal Society for its inspection. I have ender Voure

with the food, the day ; an Dr.

Tho. Hy bon, who

voured to make it as accurate as poffible in all its proportions; yet am afraid I have made the ears a small matter too long. There is a figure of it in the London Magazine for December last, which has no resemblance at all to it, except in the ears, which the engraver, who drew it, has made to turn forwards, contrary to nature. However, the following description will, I believe, be the

proper account of it.

)UIC

It is fomething taller than the largest fized cat, being about 15 inthes high at the shoulders; slender The head and light, tho' ftrong. is small in proportion to the rest, and the neck flender. It has nothing ferce in its aspect, but is mild and very tame. It is exactly of a fawncolour, having its ears black on their outfides, and lined with white hairs, and some white round the root of each ear; it is also white under the throat and belly, and a little fo on the backs of its limbs. Its eyes are small, and its head like that of a cat, but somewhat slenderer; its legs are genteel and strait, with the paws of a cat, having the power of dilating and contracting its toes, which are armed with strong crooked nails, in the fame manner as a cat or tyger does; and its actions are like those of a cat. I fat and watched its motion, and faw it lick its foot, and rub it over its face feveral times, exactly like a cat; and was told by the man who shewed it me, that, if it is offended, it hisles. examined its teeth, and find them in the same number and manner with those of a cat. And as to its food, they give it raw mutton every day; and when it is fick, which it

often is, they give it a live fowl, or rabbit, which it feizes eagerly, and lies upon it without motion, for a confiderable time, to fuck the blood, and this proves a certain cure. The figure shews it to have also a tail like that of a cat.

None of the natural historians have any account of this animal, that I have yet feen, except the learned Dr. Walter Charleton, who has a bad figure of it, engraved at the expence of Dr. John Lawson, his cotemporary, of the college of physicians, as it appears in an inscription at the bottom of the plate, wherein the head is, contrary to truth, very large and ftrong in appearance, the tail like that of a fox, and the whole as strong as a mastiff dog; the name given it in the plate is the fame with this, but differently spelled, thus, Siyahghush.

This author very justly ranks it among the cats, and has given fuch an account of this animal, as well deferves the notice of this learned fociety, of which I have made the

following English extract.

" Among the wild cats, which vary according to the difference of climate, manner of living, and the like, none is more worthy of notice than that which is now kept in the park of our fovereign K. Charles It was fent to the king by an 11. English gentleman, who was governor of our mercantile affairs in the dominion of Surat, and is called, among other names, in the Perfian language, Siyah-ghush, that is, Black-ear, all along the coast of Coromandel, and indeed all over India. It is about the fize of a fox,

Dr. Charleton fays, that he was obliged to his good friend the learned Dr. The Hyde, then principal librarain to the Bodleian Library, for this interpretabut, who was well verted in the oriental languages.

but like a cat in its form ; and has the cunning and cruelty of a leopard, with the limbs of a cat, but longer and ftronger; having fo much strength, that I saw it kill a hound, that came in his way, in a moment. The legs are thick fet with hair, and its nails concealed under them, which are never extended but upon feizing its prey, which is common to lions, panthers, and domestic cats. But what seems peculiar to this animal is, that, having jumped upon his prey, he lies upon it unmoved, holding his bite, as if he was dead, whether for joy, or in order to drink the blood of the creature. The great men in India have them bred up tame; because of their dexterity in catching birds, hares, rabbits, and fuch-like; and fach is their craft and fierceness, that they will feize even a fox; but their keepers will not fuffer them to attack any thing above their strength, and therefore they only fet them at cranes geefe, ducks, pheafants, partridges, peacocks and fuch-like game, which they feize by many kinds of deceit, to the great pleafure of the spectators; and catch those timid animals, the hare, rabbit, fawn, goat, &c. by fwift running, and fometimes by

When they are fick (which, from over-gorging their stomachs, they often are) their keepers steep a piece of tender meat in human urine, and feed them with it, and being bruised or tired by over-hunting, they give them some mummy, wrapped up in their meat, and a warm place to rest in till they recover."

It is faid of this animal, that he follows the hon at a distance, in order to feed on what he leaves of the animals he destroys. To illustrate

this, Dr. Charleton quotes a paffare from the Apolog. of Sheich Saati, which was written five hundred years before, and published in Peric and Latin by Georgius Gentis; which is in English as follows :-This Black-ear is asked, " What makes him keep company with the lion, and feem To officious to please him?" to which he answers, "That I may feed on his leavings, and lead my life fafely under his protection." To which it is replied, "Since you live under the fhadow of his protection, and draw such benefit from him, why do not you approach nearer to him ?" He answers, " If I took your counsel, and came near to him, I should not be safe from his fury a moment."

Now from this particular account by the learned Charleton, and my own observations on him and his actions, I am inclined to rank this animal among the cats; and join with Linnaus, who, in his Ord. fecund, has a fifth species of Felis, which agrees well with the principal characters of the animal before

us: his words are,

Felis cauda elongata, auribus—
—penicilliformibus.'

The following account of a battle between a ferpent and a buffalo, was fent by a letter from a Duth gentleman at Batavia to his friend at Berlin, with the manner in which these serpents attack, conquer, and devour the largest animals.

IN our colonies of the East Indies
there are serpents upwards of 25
feet in length. Though their throat
may seem too narrow to be capable
of swallowing animals of a certain
bigness,

bignels, we have notwithstanding frequent proofs that this indeed happens; and, amongst those I have bought of our hunters, a stag of middle age was found quite intire, with his skin and all his members in the body of one of them. In another was found a wild he-goat, with his great horns, and no part of his body was wanting; and in a third a hedge-hog, armed with all its prickles. In the island of Amboyna a woman with child was thus facked in by one of these serpents: it is so they swallow up whole animals, which they find means to compals in the following manner:

ain

When hunger presses them, they lie in ambush, and endeavour to furprise some animal; and, when they have feized it, they twine about its body so closely, that they break its bones by squeezing it. If the animal is strong, and makes great refistance, and the serpent cannot stifle him in his first position of laying hold of him, he strives to grapple with some trunk of a tree, which he furrounds with his tail, and thereby acquiring an addition of strength, redoubles his efforts, till he suffocates him. At the same time he feizes him by the nostrils with his teeth, and, fo, not only intercepts his respiration, but the deep wounds he gives with his bites occasioning a great effusion of blood, he at last kills by this method the largest animals.

Persons of credit affured me of having feen in the kingdom of Aracan, on the frontiers of that of Bengal, a like combat, near a river, between an enormous serpent of this kind and a buffalo (an animal at least as large as the wild ox) which was killed and devoured by the terpent. His bones made fo great

a noise while the serpent was breaking them, by twining about his body, and preffing it together, that it was heard within cannon-shot by some who were witnesses of this spectacle. It seems astonishing, that those serpents, whose throat is so narrow in proportion to the rest of their body, can swallow so large an animal quite intire, and without tearing it in pieces as dogs and lions; but they succeed effectually,

and the way is thus:

When these serpents, whose throat is indeed narrow, but susceptible of a great dilatation, have killed some animal, and shattered his bones, so as that nothing appears more than a shapeless mass, they begin by ftretching him out with the tongue as much as possible, and, by licking, to fmooth and polish him, as well as they can, down the hair: they afterwards besmear the whole skin with a glutinous mucofity, then lay hold of him by the head, and at faft fwallow him quite intire by strong reiterated fuctions; but they sometimes take up two days, and even more, in going through this work, according to the bigness of the animal: after this, the ferpent, gorged with fo great a quantity of food, becomes incapable of attacking or defending himself; and the country people and hunters, without incurring any danger, throw a rope about his neck, and frangle him with it, or sometimes even strike him dead with clubs and sticks. Having afterwards cut him up in pieces, they fell his flesh, which is reckoned very delicious food; but they separate the head, being persuaded, that the teeth of the upper jaw are furrounded with little bladders, filled with a venomous liquor, which, burfting at

the time of biting, infuse their poifon into the wound; and this poifon, soon mixing with the mass of blood, occasions certain death in all kinds of animals, when it reaches the heart.

Being defirous to have the skeleton of one of these serpents which I had bought, and my servants having boiled it in a great copper with water and quick lime, one of them took the head for cleaning it, the sless being already separated; and, in turning it about, one of the great fore teeth, which are extremely sharp, wounded him in the singer, which was immediately followed by a prodigious inslammatory swelling in the hand, and a continued sever and delirium.

These symptoms did not cease, till the serpent-stone, prepared here by the Jesuits, and applied to the wound, had attracted all the venom.

History of Jeffery Hudson the Dwarf, from Mr. Walpole's Anecdotes of Painting in England.

A T St. James's (fays he, in the life of Daniel Mytens) is Jeffery Hudfon, the dwarf, holding a dog by a ftring, in a landscape, coloured warmly and freely, like Snyder of Rubens. Mytens drew the same figure in a very large picture of Charles I. and his queen, which was in the possession of the late earl of Dunmore; but the single figure is much better painted. The history

of this diminutive personage was so remarkable, that the reader will perhaps not dislike the digression.

+

+ He was born at Oakham in Rutlandshire in 1619; and about the age of feven or eight, being then but eighteen inches high, was retained in the fervice of the duke of Buckingham, who refided at Burleigh on the Hill. Soon after the marriage of Charles I. the king and queen being entertained at Burleigh, little Jeffery was served up to table in a cold pye, and prefented by the duchefs to the queen, who kept him as her dwarf. From feven years of age 'till thirty, he never grew taller; but after thirty he shot up to three feet nine inches, and there fixed. Jeffery became a confiderable part of the entertainment of the court, Sir William Davenant wrote a poem called Jeffreidos, on a battle between him and a † Turkey-cock; and in 1838 was published a very small book, called the New Year's Gift, prefented at court from the lady Parvula to the lord Minimus (commonly called little Jeffery) her majesty's servant, &c. written by Microphilus, with a little print of Jeffery prefixed. Before this period Jeffery was employed on a negociation of great importance: he was fent to France to fetch a midwife for the queen; and on his return with this gentlewoman, and her majesty's dancing-master, and many rich presents to the queen from her mother Mary de Medicis, he was taken by the Dunkirkers ¶. Jeffery,

¶ It was in 1630. Besides the present he was bringing for the queen, he lost

The picture of the queen of Scots at St. James's is a copy by Mytens.

[†] See Fuller and Wright's Rutlandshire.

† The scene is laid at Dunkirk, and the midwise rescues him from the swy of his antagonist.

fery, thus made of consequence, grew to think himself really fo. He had borne with little temper the teazing of the courtiers and domeltics, and had many fquabbles with the king's gigantic porter +: at last, being provoked by Mr. Crofts, a young gentleman of family, a challenge enfued; and Mr. Crofts coming to the rendezvous armed only with a fquirt, the little creature was so enraged, that a real duel enfued; and the appointment being on horseback with pistols, to put them more on a level, Jeffery with the first fire shot his antagonist dead. This happened in France, whither he had attended his mistress in the troubles. He was again taken prisoner by a Turkish rover, and fold into Barbary. He probably did not long remain in flavery; for at the beginning of the civil war he was made a captain in the royal army, and in 1644 attended the queen to France, where he remained till the restoration. At last, upon suspicion of his being privy to the popish plot, he was taken up in 1682, and confined in the Gatehouse, Westminster, where he ended his life, in the fixty-third year of his age.

On the existence of Giants in South-America.

THE inflability of philosophic systems has long been a subject of ridicule or complaint; innovations in the subjects of taste or religion are more permanent: but almost every age produces new attempts to explain the fecrets of nature, as some latent property happens to be known; so that the old man finds the system of his youth

exploded or forgotten.

Among other disquisitions in phyfic or natural history, that of the fize of men, in different countries or different ages, has not a little employed speculation, and produced disputes. On one fide, the testimony of all antiquity, which mentions giants as familiarly known; the skeletons dug up of a monstrous fize, and some more modern discoveries in the fouthern parts of America, are brought to confirm their existence. On the other side, when these proofs come to be examined, the ancients will appear frequently to have been deceived themselves. or to have attempted to deceive others: the skeletons will appear to have belonged to other animals, never to men; and the existence of the tall Patagons in South America, has been called into question by Sir Hans Sloane, Frazer, and others. In this manner the controversy feemed almost at an end; but there has been lately published at Madrid a work, entitled Giganthologia, by P. Joseph Tarrubia, proving the exittence of this species of men, not, only from the concurrent teftimony of all antiquity in this our old world, but from several Indian

to the value of 2500 1. that he had received in France on his own account from the queen-mother and ladies of that court.

† A bastrelief of this dwarf and giant is to be seen fixed in the front of a house near the end of Bag io court, on the east side of Newgate-street. Probably it fandard is recorded by a large O on the back of the terrace at Windfor, almost under the window of the gallery. This man went mad, and prophened. In Whitechapel there was a fign of him, taken from a print of St. Peter.

anti-

antiquities discoverable in the new. The monstrous statues of several of their idols, which are affirmed to have been no bigger than the life, and feveral utenfils, that, from their fize, could have been made use of only by giants, are confirmations of this; but what is a more irrefragable proof than either, the author infifts upon having feen feveral Spaniards, who have feen those monftrous men as they happened to ftray from their wild retreats, verging towards the firaits of Magellan. They are described as being nine or ten feet high; firong in proportion to their fize; and active to a furprifing degree : but instead of dipping into a controverly, that time, and not disputations, will one day determine, we will only transcribe a ftory told us of one of those extraordinary species of beings.

Madalena de Niqueza was one of those unhappy women, who leaving Europe, expected to find affluence and fortune in some of the extensive provinces, subject to the Spanish monarchy in Southern America. Those who are friendless at home are generally friendless among strangers. She wandered for some time in the ffreets of Carthagena, feeling all the miferies of houseless indigence, and an unfavourable fky. In this forlorn state, an Indian thepherd faw her, married her, and brought her with him to his native village, which bordered on the favage countries of the Guanoas and

the rell Those barbarous nations, which could never be reduced to the fubjection of the Spaniards, make continual excursions upon the countries. that have been reduced, and kill or carry away the inhabitants who happen to fall into their power.

Chiquitos,

In one of these incursions, Mada lena and her hufband were take prisoners, and carried some hus. dred leagues to the fouth, where they were several times exchanged for other commodities in the ujual course of traffic, till at length they arrived among a people fill, possible, more rude than their former mafters; and here they were put to the usual employment of

keeping cattle.

In this fituation, however, they had not long continued, when a general alarm was spread through the Indian town where they were stationed, for an army of giants were marching forward, and laying all things wafte with fire and fword before them. Madalena could perceive, that the Indians, instead of attempting to fly, rather endeavoured to conceal themselves, as they despaired of finding safety by fwiftness, in which the giants fo much excelled them. The formidable army at length appeared, but instead of spreading that terror which was expected, she was surprised to see the humanity with which they treated their prisoners. This body of giants confifted of about four hundred, the lowest foldier in the whole army was not under nine feet high, and the tallest was about eleven. Their features were regular, their limbs exactly proportioned; they had a sweetness and affability in their looks, and their speech was deep, clear, and fonorous. Madalena and her hufband were now made prisoners once more, but treated with infinitely more compassion and tenderness than by their former mafters. The giant to whose lot the fell, used to hearken to the account of her adventures with pleasure, and feemed to regard

Account of a Girl who subsisted near four years on Water alone.

From the Memoirs of the Academy of Sciences, at Paris, for the year 1756.

November 9, 1751, Christina Michelot, aged ten years and a half, the daughter of a vine-dreffer at Pomard, half a league from Beaune, was feized with a fever, which was looked upon as the beginning of the measles. She took a light ptisan : but absolutely refuled every other medicine, and would fwallow nothing but water. The measles did not appear, and he had no other symptom but such a violent head-ach, that she got out of bed to roll on the floor; and one day her father going haffily to take her up, she fell into a swoon, which continued fo long, that the was fuppoled to be dead : the recovered,

however, but some days after lost the use of all her limbs, which retained only the flexibility of those

of a person newly dead.

This went off; she recovered her appetite and her speech, but the head-ach continued; and foon after fhe fell into a delirium, accompanied with convultions, startlings, and a trembling of the arms and legs, and fometimes the could not

be kept in bed.

To remove this, she was bled in the foot, and blifters were applied to her legs. This threw her into a total languor, and she lost the use of all her limbs, and the power of eating and speaking, retaining only her hearing, feeing, and feeling, and a little respiration. cept in the delirium mentioned above, which did not continue long, the still preferred the use of her reason, which she employed to intimate, by inarticulate founds, what she liked or disliked. founds were at first only two: she multiplied them afterwards, and began to add to them a little motion of her hands, which increased as the founds became more varied: still she took nothing but water, and that in a very fmall quantity: hence her belly shrunk so much, that one imagined they could feel the vertebræ through it, and could diftinguish none of the intestines. All that part, and the lower extremities, which had loft all feeling, feemed to be feized with a partial palfy. As to the rest, the body still kept its colour, her eye was brifk, her lips of a good red, and her complexion very fresh : her pulle was regular, and even firong.

She fill continued the fame regimen, except that the swallowed the water with much more ease, and

of Beaune, who faw her in this condition, could not believe her fole nourishment was water, till a lady, at his defire, took her into her house, and kept her long enough he then to fatisfy him of it: thought to deceive her, by giving her, instead of water, veal broth highly clarified. He indeed deceived her senses, but not her stomach, which immediately threw up the broth with nauseas and violent convulsions, which were followed by a fever.

On her leaving this lady's house, her father carried her with him on a

pilgrimage.

On her return, she was so distresfed with thirst, that she made a violent effort, and her speech returned, to ask for water: from this time fhe retained the use of her speech, which became more and more familiar to her. She also increased the quantity of her drink, which the discharged plentifully by urine, It will be easily imagined, from the regimen the had to long observed, that the had no discharge by stool.

She now recovered the use of her arms fo far as to be able to fpin, to drefs herfelf, and to make use of two short crutches, by the help of which the dragged herfelf on her knees, not being able yet to ale her legs: by this means fhe could go to the jar which contained all her provisions, and even to the houses of fome neighbours: fhe was in this condition when M. Lardillon faw her on the oth of December, 1754. above three years after the beginning of her diforder. He obferved that the began at that time to raife her right knee; that neither the flesh of her thigh, nor that of her leg, on that fide, was fallen

in greater quantity. A physician away, nor those of her arms and hands; that her fkin was foft, her face plump, with an air of ferenity that discovered no bad habit of body: he ventured to foretel that she would get quite well, and perhaps fooner than was generally imagined. His prediction was fully verified: as foon as fhe arrived at the age of puberty, her appetite returned, she began by little and little to eat; and, with the affiltance of fome light medicines, all the symptoms of her disorder succesfively disappeared: so that, in the month of July, 1755, she eat as usual, and began to walk without crutches, having been near four years without taking any nourishment. However high we may have carried our knowledge of the human body, and the animal economy, we are very far from being able to account for such phenomena.

An account of a periodical Dumbnss. From the Ephemerides of the Curious.

THE fon of an inn-keeper at Jefing, in the duchy of Wirtemberg, of s. choleric constitution, and about 25 years of age, was taken so ill after supper on St. Stephen's day, now upwards of 15 years ago, that he could neither stand nor fit. He was also so fick at heart, that, had he not been relieved by copious vomiting, he was often apprehenfive of being fuffocated. About an hour after, he was better; but, during three whole months, he became much dejected and melancholy, and fometimes as if feized with fear. After the expiration of this term, he was fuddenly struck dumb, without being

ble to pronounce the least word, or form the least found, though he could speak very articulately before. At first, the loss of his speech and voice was instantaneous, but began to continue longer every day; fo that, from the duration of some minutes, it amounted to half an hour, two hours, three hours, and lastly to twenty-three hours, yet without order. Such was his condition upwards of half a year. At last, the return of his speech kept so constant and regular an order, that now, for 14 years together, he cannot speak but from noon, during the space of an intire hour, to the precise moment of one o'clock. Every time he loses his speech, he feels something rise from his stomach to his throat. He cannot be deceived by the transposition of hours, because he observes always and very exactly the term, from twelve to one, though no bell rings nor clock strikes. Excepting this loss of speech, he makes no complaint of the disorder of any animal function. Both his internal and external senses are sound: he hears always very exactly, and anfwers by gestures or writing to the questions proposed to him. He eats and drinks heartily, and is very handy and active in doing the bufinels of the family. At his time of speaking, his discourse is discreet and fenfible, for a person of his education; and, if defired to read, which he fometimes does of himfelf, he is fure to stop short always in filence the moment that one o'clock in the afternoon locks up the powers of his tongue.

There cannot be a more extraorduary case than this, nor one so

much deserving of the attention of the curious. How to account for it, must be extremely difficult. Perhaps something he eat at supper, when he was first taken ill, has ever since remained undigested in his stomach or intestines; and, as he used to feel something rising from thence towards his throat, it probably caused the extinction of his voice, which he did not recover till it again subsided.

An account of a French lady, blind from her infancy, who can read, write, and play at cards, &c.

A Young gentlewoman of a good family in France, now in her 18th year, lost her fight when only two years old, her mother having been advised to lay some pigeon's blood on her eyes, to preserve them in the small-pox; whereas, so far from answering the end, it eat into them: nature, however, may be said to have compensated for the unhappy mistake, by beauty of perfon, sweetness of temper, vivacity of genius, quickness of conception, and many talents which certainly much alleviate her missortune.

She plays at cards with the same readiness as others of the party; she first prepares the packs allotted to her, by pricking them in several parts, yet so imperceptibly that the closest inspection can scarce discern her indexes. She forts the suits, and arranges the cards in their proper sequence, with the same precision, and nearly the same facility, as they who have their sight. All she requires of those who play with her, is to name every card as it is

^{*} Madamoiselle de Salignac, born in Xaintonge.

played; and these she retains so exactly, that she frequently performs some notable strokes, such as shew a great combination and strong me-

mory.*

The most wonderful circumstance is, that the should have learnt to read and write; but even this is readily believed on knowing her method. In writing to her, no ink is used, but the letters are pricked down on the paper; and by the delicacy of her touch, feeling each letter, she follows them successively, and reads every word with her fingers ends. She herfelf in writing makes use of a pencil, as the could not know when her pen was dry; her guide on the paper is a small thin ruler, and of the breadth of her writing. On finishing a letter, she wets it, fo as to fix the traces of her pencil, that they are not obscured or effaced ; then proceeds to fold and feal it, and write the direction; all by her own address, and without the affiftance of any other person. Her writing is very strait, well cut, and the spelling no less correct. To reach this fingular mechanism, the indefatigable cares of her affectionate mother were long employed, who accustoming her daughter to feel letters cut in

cards or pasteboard, brought her to distinguish an A from a B, and thus the whole alphabet, and afterwards to spell words; then by the remembrance of the shape of the letters to delineate them on paper, and lastly, to arrange them so as to form words and sentences.

She has learnt to play on the guittar, and has even contrived a way of pricking down the tunes as an affiftance to her memory. So delicate are her organs, that in finging a tune, tho' new to her, she is able to

name the notes.

In figured dances she acquits herfelf extremely well, and in a minuet, with inimitable ease and gracefulness. As for the works of her sex, she has a masterly hand, she sews and hems perfectly well; and in all her works she threads the needles for herself, however small.

By the watch, her touch never fails telling her exactly the hour

and minute +.

As a supplement to this letter we shall give a postscript of the late bishop (then Dr.) Burnet to the second letter of his travels.

" In the account that I give you,

In this respect she is equalled, if not excelled, by Mr. Stanley, organist of St. Andrew's, who, though blind almost from his birth, plays at whist as well as most men.

† The reader may observe from this account, that the French lady has nothing to boast of in which the is not excelled by the gentleman already mentioned, except reading and writing. The works peculiar to her sex are gained mechanically; but the distinguishing colours, telling the precise time by a watch, naming the notes in music, and many other things depending upon the ear and touch, are so familiar to Mr. Stanley, that his friends cease to think them extraordinary in him: his naming the number of persons in a room on entering it; his directing his voice to each person in particular, even to strangers when they have once spoken; his missing any person absent; his telling who that person is; his conceptions of youth, beauty, symmetry, and shape, are such wonderful attainments as are, perhaps, all peculiar to himself; with which nothing that is reported of the French lady can be brought in competition.

of Geneva, I forgot to mention a very extraordinary person that is there, Mrs. Walkier; her father is of Staff-house, the loft her fight when the was but a year old, by being too near a stove that was very hot: there refts in the upper part of her eye fo much fight, that the diffinguishes day from night: and when any person stands between her and the light, she will distinguish by the head and its dress a man from awoman, but when the turns down her eyes she fees nothing: she hath a vast memory : besides the French, that is her natural language, she fpeaks both High-Dutch, Italian and Latin, the hath also the pfalms by heart in French, and many of them in Dutch and Italian : the understands the old philosophy well, and is now studying the new: she hath studied the body of Divinity well, and hath the text of the fcriptures very ready: on all which matters I had long conversations with her. She not only fings well, but the plays rarely on the organ; and I was told she played on the violin, but her violin was out of order. But that which is most of all, is, she writes legibly: in order to her learning to write, her father, who is a worthy man, and hath fuch tendernels for her, that he furnisheth her with malters of all forts, ordered letters to be carved in wood, and she by feeling the characters formed such an idea of them, that she writes with a crayon fo distinctly, that her writings can be well read, of which I have several essays. I saw her write, she doth it more nimbly than can be imagined; she hath a mathine that holds the paper, and keeps her always in line. But that which is above all the rest, she is a person of extraordinary devotion, VOL. V.

great refignation to the will of God, and a profound humility. The preceptor that the father kept in the house with her, hath likewise a wonderful faculty of acquiring tongues. When he came first to Geneva (for he is of Zurich) he spoke not a word of French, and within thirteen months he preached in French correctly, and with a good accent: He also began to study Italian in the month of November, and before the end of the following February he preached in Italian; his accent was good, and his stile florid, which was very extraordinary, for the Italian language is not spoken in Geneva. tho' the race of the Italians do keep up still an Italian church there."

An account of the imposture of the boy of Bilson.

THE boy of Billon, who was only thirteen years old, by instruction, could so conduct himself before the public, that the spectators were induced, by the extraordinary fits, agitations, and the surprizing distempers wherewith he seemed to be affected, to believe him to be possessed of a devil and bewitched. In his fits, he feemed to be both deaf and blind, writhing his mouth, continually groaning and panting, and although often pinched with men's fingers, pricked with needles, tickled. on his fides, whipped severely with rods, and treated with other corrections, he was never known to difcover the least fense of what was done unto him. When he was thought to be out of his fits, he digefted nothing given him for nourishment, but would often surprize the company with voiding and cafting rags, thread, firaw, crooked pins,

pins, needles, &c. out of his mouth. By such means his belly grew almost as slat as his back; his throat swelled and grew hard; his tongue feemed to be stiff and rolled up towards the roof of his mouth; so that he seemed always dumb; had he not vouchfased to speak a few words once a fortnight or three weeks.

This impostor proceeded so far, as to accuse a poor honest, industrious old woman, named Joan Cock, of witchcraft, and of bewitching him in particular. And by his artful behaviour, when she was brought ever so secretly into the room where he was, raised a strong presumption of the truth of his accusation; for which crime of witchcraft the poor woman was apprehended, and obliged to take her tryal at Stafford affizes in 162c, to the manifest danger of her life, but acquitted by

the jury. The judges then committed the care of the boy to the bishop of Litchfield and Coventry, then present in court, who carried him to his palace at Eccleshal; and there having first taken the advice of well-approved phyficians, concerning the state of his body, his lordship did intend to proceed with him by feverities; but being informed, in the mean time, that the boy always fell into agitations and violent fits, upon hearing these words of St., John's gospel, In the beginning was the Word, &cc. he refolved to begin with this experiment: " Boy, faid the bishop, it is either thou thyfelf, or the devil, that abhorrest those words of the gospel; and if it be the devil, there's no doubt of his understanding all languages; fo that he cannot but know, and shew his abhorrence, when I recite the same sentence in

the gospel out of the Greek text: But if it be thyfelf, then thou art a execrable wretch, who playest the devil's part, in loathing that part of the gospel of Christ, which above all other fcriptures, doth express the admirable union of the Godhead, and manhood, in one Christ and Sa. viour, which union is the arch-pillar of man's falvation : Wherefore, look to thyfelf, for now thou art to be put upon trial, and mark diligently whether it be the same scripture which shall be read unto thee out of the Greek Testament, at the reading whereof in the English tongue thou dost feem to be so much troubled and tormented."

Then the bishop read to him the 12th instead of the 1st verse of the 1st chapter of St. John, which the pretended demoniac, supposing to be the first verse, he, as usual, sell into a fit, which being soon over, the bishop then read to him the real first verse in Greek; but he supposing this was some other text, shewed no fort of emotion at this reading.

Here the bishop would have rested the detection of the imposture, and the youngster seemed greatly confounded at his own mistake; but recovering himself, and resuming various emotions and postures, he excused himself to the company by pretending he was disturbed at the fight of two mice; complained of great fickness; and in order to get home to his fathor's house, he would answer no more questions; but by writing, as well as he could, fignified that he was troubled with a violent pain in his belly. To confirm his complaint, he next day contrived to make water as black as ink, and continued fo to do for two days, with tokens of great pain. A cir-

haccount of the family at Wattisham, which has lately been afflicted with the loss of their limbs; published by Dr. Wollaston, of Bury, in Suffolk.

OHN DOWNING, a poor labouring man, living at Wattiam, in January last, had a wife nd fix children; the eldeft, girl 15 years of age, the ungest about four months .- They ere all at that time very healthy, d had not any of them been ill for me time before,—On Sunday, the oth of January 1762, the eldest girl mplained, in the morning, of a ain in her left leg, particularly in healf of the leg. Towards eveng the pain grew exceedingly vioent.—The same evening another in complained of the fame violent an in the same leg. -On the Monay, the mother, and another child; nd on Tuesday all the rest of the mily were affected in the fame namer; fome in one leg, fome in th legs .-- The little infant was aken from the mother's breaft: t feemed to be in pain, but the abs did not mortify; it lived a wweeks. The mother, and the

other five children, continued in violent pain a confiderable time: In about four, five, or fix days, the diseased leg began to turn black gradually, appearing at first covered with blue spots, as if it had been bruised .- The other leg of those who were affected at first only in one leg, about that time also began to be affected with the same excruciating pain, and in a few days that leg also began to mortify.—The mortified parts separated gradually from the found parts; and the furgeon had, in most of the cases, no other trouble than to cut through the bone, which was black, and almost dry .- The state of their limbs at present is this:

Mary, the mother, aged 40, has lost the right foot at the ancle; the left foot also is off, and the two bones of the leg remain, almost dry, with only some little putrid sless adhering in the same places.—The sless to sound to about two inches below the knee.—The bones would have been sawn through that place, if she would have confented to it.

Mary, aged 15, both legs off below the knees.

Elizabeth, aged 13, both legs off below the knees.

Sarah, aged 10, one foot off at the ancle.—The other foot was affected, but not in so great a degree, and is now sound again.

Robert, aged 8, both legs off below the knees.

Edward, aged 4, both feet off. An infant, four months old, dead.

The father was attacked about a fortnight after the rest of the samily, and in a slight degree; the pain being confined to his singers.—
Two singers of the right hand continued for a long time discoloured,

2 80

and partly shrunk and contracted; but he begins now to have some use of them.—The nails of the other hand were also discoloured.—He

lost two of them.

It is remarkable, that during all the time of this misfortune, the whole family are faid to have appeared, in other respects, well, eat heartily, and slept well, when the violence of the pain began to abate.

The mother is now emaciated, and has very little use of her hands.

The eldest girl has a superficial ulcer in one thigh, and seems also ill. The rest of the family are pretty well.—The stumps of some of them perfectly healed.

An account of an Amputation of a leg, without any subsequent Hamor-rhage. By Thomas Antrobus, surgeon in Liverpool. Extracted from the second wolume of Medical Obfervations and Inquiries.

WILLIAM JAMES, of Briftol, aged thirty years, was admitted Feb. 1758, into the infirmary at Liverpool, for a spitting of blood; and foon afterwards, was feized with an epidemic malignant fever; which brought on a mortification of the left foot. On this occasion, warm spirituous fomentations were used; cataplasms, made of the Spec. e Cymino, with the grounds of strong beer, were applied; and the Peruvian bark administered in a warm cordial julep. By this method, the progress of the mortification was stopped, about two inches above the ancle: and, in a little time, a feparation, with a good digeftion of the This favourfound part, enfued. able appearance, though fome fymptoms of a fever still remained, determined me, with the approbation of the other surgeons, Mr. Bromfield, and Mr. Pickering, to take of

the leg.

The amputation was accordingly performed, in the usual place below the knee ; but when the togr. nequet was flackened, there was no efflux of blood, from the divided arteries, nor the least pulsation to be perceived, at any of their extremities. By what the patient feemed to fuffer in the operation, there was no apparent diminution of fensibi-Kty. The effusion of blood, which followed the incision through the fkin and flesh, was very small, and feemed to be no other than the recurrent blood, from the crural and other veins. It appeared blackish, as if it had stagnated som time; and much refembled that which is found in the veins of dead body. Sponges, dipt in warm water, were applied to the flump for the space of ten or fifteen mi nutes, the tournequet being fil loose; whilst those who were prefent at the operation, were aftonish ed that no hæmorrhage followed After attending fo long, and n fign of bleeding being observed, the stump was dreffed, without any li gatures made on the arteries, wit compresses dipt in warm oil of tur pentine, and laid on the extremite of the arteries. Thefe, with the other dreffings, were fecured by at easy bandage; and the tourneque remained loose, lest, a new accelfion of fever should bring on the apprehended hæmorrhage. integuments, muscles, and bones of this part, appeared to be in a natu ral and vivid state; but the arm, of the same fide, had fuch an uncommon blackish hue, as feemed to threaten a total gangrene, though the radial artery enjoyed a good pullation.

good d

and the

limb,

knee,

IN the unman at Lille fixed pa

In the evening, I visited my patient, found the pulse much raised, and no appearance of the livid colour on the arm remaining; nor were the dreffings discoloured with any blood. I ordered the tournequet to be kept loofe on the thigh, an opiate to be given, and the bark to be prepared again for him. the fourth day after the operation, I renewed the dreffings, and perceived not the least appearance of blood: and instead of seeing a gangrened fump, unexpectedly a good digeftion presented itself round the edges thereof, without much inflammation, hardness, or other bad symptom. He was dreffed every day after; the digestion increased; and the delirium of the fever, which had fill remained, foon went off. Thus, in the ordinary time, the part was healed, and the health of the patient perfectly recovered. this account, truly stated, we find there was a separation of the mortification above the ancle, and a good digestion upon the live part; and though, upon amputating the limb, at the usual place below the knee, there was not the least appearance of blood, or pulsation, at the divided arteries; yet a digestion appeared upon the stump, on the fourth day after the operation.

Her body being opened by M. Varocquier, professor of anatomy at that place, in the presence of two furgeons, the left ovarium was obferved to be as big as a hen's egg; and being opened there flowed from it about an ounce of a lymphatic liquor like whey, and there was found in it a fœtus a little decayed. It was of the length of two inches from the crown of the head to the The uterus and the oppofite ovarium were in their natural state: but what is extraordinary in this subject, in which M. Varocquier found a fœtus, the hymen That which is was quite entire. reckoned an infallible proof of virginity is therefore but an equivocal mark.

An account of a remarkable Mummy. From the Memoirs of the Royal Academy of Sciences at Paris, for the year 1756.

COME peafants being at workin a field belonging to the village of Matres-d'Artieres, near Riom in Auvergne, found a kind of trough, feven feet long, three broad, and eight inches in depth, cut out of a stone which seemed to be a granite, and covered with another stone of the fame kind. In this trough was a leaden coffin, which contained the body of a lad about twelve or thirteen, so well embalmed, that the flesh was still flexible and supple. The arms were covered with bands twifted round them from the wrist to the top of the shoulders, and the legs in the same manner from the ancles to the top of the thighs: a kind of shirt covered the breast and belly, and over all was a winding-

An account of a Conception without rupture of the Hymen. From the Memoirs of the Royal Academy of Sciences at Paris, for the year 1756.

IN the month of March 1756, an unmarried woman, aged 30, died at Lille, of the consequences of a fixed pain in the lest iliac region.

fheet. All these linens were imbibed with a balm of fuch a strong fmell, that the stone trough retained it, and communicated it to those who came near it, long after the posited in this place: and the pa coffin was taken out of it. This mummy was carried first to the curate's of the parish : it had at that time on its head a wooden cap, lined with an aromatic paste, which had the same smell as the balm in which the linen had been dipped. It had also in its hands balls of the fame paste, which were kept on by little bags, which covered the hands and were tied at the wrifts; and the arms, thighs, and legs were covered with some of the same paste. But being removed foon after to Riom, by order of the intendant of that place, all the coverings were taken away; and the colour of the fkin, which was at first very clear, changed to a dark-brown. The drug employed in embalming had very much diminished the bulk of the fleshy parts; but had preserved their suppleness so well, that a surgeon making an incision in the stomach, one of the by-standers put in his finger, and could feel the diaphragm, the great lobe of the spleen, and the liver; but these two last had lost much of their bulk. A part of the epiploon, about three inches in length, being extracted at this opening, was found to be quite found, and as flexible as in its natural state. About twelve inches of the jejunum being likewise extracted, and tied at one end, it was inflated by blowing in it, as readily as if it had been that of an animal just killed. In short, the body feemed to be embalmed in a quite different manner from that of the Egyptians, whose mummies are dry and brittle.

No inscription on the coffit of linen, no medal, nor any fymhi whatever, was found, that min discover the time when it was de fants affirmed, with oaths, that the had not removed or embezzled an thing.

An account of a Body, which had be found intirely converted into Hair a considerable time after it an buried ._ From the Acts Leipfic.

BOUT forty-three years ago, woman was interred at Nuren berg, in a wooden coffin painted black, according to the custom of the country. The earth, where her body was deposited, was dry an yellow, as it is for the most part in the environs of that city. Of three bodies, buried in the same grave this woman's was laid the deeper in the ground; and, there being t occasion to make room for a four body, the grave was dug up anew but, to the great surprise of the dig ger, when he had removed the two uppermost coffins, he perceived confiderable quantity of hair that had made its way through the flit and crevices of the coffin. The lid being taken off, there appeared perfect resemblance of a human h gure, the eyes, nofe, mouth, ears, and all other parts, being very diftinet; but from the crown of the head to the foles of the feet, it was covered with very long, thick, and The grave-digger, frizzled hair. after examining it for fome time, happened to touch the upper part of the head; but was more furpri ed than before, on feeing the intit body shrink, and nothing at last remain in his hand, but a bundle of rough hair, which infenfibly affumed a brownish-red colour.

The learned Honoratus Fabria Lib. 3. de Plantis, and feveral other authors, are of opinion, that hair, wool, feathers, nails, horns, teeth, &c. are nothing but vegetables. be fo, we need not be furprifed to fee them grow on the bodies of animals, even after their death, as has been frequently observed. Petrus Borellus, Hift. & Obf. Med. Cent. I. Obf. 10, pretends, that these productions may be transplanted as vegetables, and may grow in a different place from that where they first germinated. He also relates, in some of his observations on this subject, among others, that of a tooth drawn out and transplanted, which may appear pretty fingular.

Though the external furface of bodies is the usual place for the growth of hair, it has, notwithflanding, been sometimes found on the tongue, in the interior of the heart, and on its surface; in the breafts and kidnies; and in other glandular and muscular parts: but there is no internal part where it is oftener found than in the ovarium of females. This has been observed in three different subjects by Dr. Tylon, as we find it related in the Philosophical Collections of Mr. Hooke; who also tells us, on the testimony of Mr. Arnold, that a man, hanged at Tyburn for theft, was found, in a very short time after he was taken away from the gallows, covered over in a very extraordinary manner with hair.

Observations on the Hair of dead Persons; being an Extract of a Litter from Bartholine to Sachs, inserted in the Acts of Copen-

I Do not know, whether you ever observed, that the hair which, in people when living, was black or grey, often after their death, in digging up their graves, or opening the vaults where they lie, is found changed into a fair or flaxen colour; fo that their relations can scarce know them again by such a mark. This change is produced, undoubtedly, by the hot and concentered vapours which are exhaled from the dead bodies.

Thoughts on the poisonous effects of Muscles.

THE poisonous effect, consequent on eating muscles, does not proceed, as I apprehend, from any ill principle in the muscle itself, nor from any noxious quality in those little crabs frequently found in them: neither does it proceed from any property derived from the copperas beds, near which muscles are sometimes found; nor from the malignity of any corrosive mineral whatever, nor from any heterogeneous mixture of animal salts that muscles may meet with in the stomach of the eater, for the following reasons:

1. That no poisonous quality is inherent in the substance of the muscle, is evident from this: that multitudes have made the muscle a part of their food, for many years, without finding the least inconvenience; on the contrary, have found them a wholesome, nourishing, and even a delicious food.

2. That the poison which produces the effect, if any such there be, does not reside in the crab, is

F 4 equally

equally demonstrable; for some will swallow as many as can be brought them, without the least scruple; and, indeed, there is but little reason to suppose that a quantity of poison, sufficient to produce such sudden and apparent ill effects, can be contained in so small a crab, when those of much larger dimensions are daily eaten with safety by all sorts of people, on those coasts, where they are sound in plenty.

3. That it cannot be owing to any vicious quality imbibed from the copperas-beds near which they are found, because the same effect is frequently produced by eating muscles gathered many hundred miles from any copperas-beds; and by those of the whitest and most inviting kind; nor can a quantity of vitriolic or mineral pungent salts, sufficient to posson a person, exist in dressed muscles, without discovering itself either in the liquor, or upon the palate when the muscles are eating.

And, 4. It cannot proceed from any heterogeneous mixture of animal falts in the stomach of the eater, because the sudden swelling of the person affected is a symptom that never follows from such a

cause.

It is further observable, that particular people only are affected by the eating of muscles, and those differently at different times. I am myself acquainted with some perfons who never could eat muscles without being ill; but who can now eat them boldly, and without the least apprehension of any bad confequences; and I have myself eaten them from my infancy, and yet they have never once disagreed with me, nor with any of my samily, save one.

I am therefore of opinion, from all the observations I have been able to make, that the disorders proceeding from the eating of muscles, happens from the ready disposition of fome glutinous particles on the furface of the muscle to adhere to what it touches of the flomach; and that the real cause, of what is generally thought the poisonous effect, is only the cohesion of the membrane of the muscle, like a piece of leaf gold, to the inner coat or lining of the stomach, which, when once dislodged, the patient almost instantly recovers.

The reason why some may be more liable than others to be affected in this manner, may be owing to the disposition of the stomach itself, the viscosity of whose contents may be a concurrent cause of

the disorder.

The usual symptoms that follow fuch an adhesion, are great oppresfion of the pracordia, strangulation, anhelation, thort cough, tingling ears, watery eyes, swelled face and hands, with efflorescence and itchings in the fkin; most of which fymptoms I have known to follow the eating of raw hot bread, swallowing the skins of grapes, and even from eating French beans. these cases, gentle emetics seldom fail to relieve the patient; but as fudden disorders of this kind sometimes prove fatal before help can be called in, oils of any kind, mixed with warm water, taken into the stomach, may, in some cases, have a good effect: for, as in loofening a plaister from the skin, oil is often the easiest way of removing it, so, in cases of an adhesion to the internal coat of the stomach, oil may have the like effect.

inclined to make the muscle a part of their necessary food, as in some places they are plenty, and are certainly nourishing. I would advise them, by way of prevention, first to prepare their stomachs by gentle emetics, and then to eat of them sparingly, with much bread and butter; and, by frequently eating them in this manner, those people, with whom such wholesome shell-sish have disagreed, have been brought to eat them without danger.

On the property of the Box-Tree to make the Hair grow.—From the Ephemerides of the Curious.

Effex, March 20.

A Young woman, of Grunberg in the Lower Silefia, having had a malignant dysentery, which occafioned the falling-off of all her hair, was advised by a person, some time after her recovery (as her hair was not likely to grow again of itself, her head being then as bare as the hand) to wash it all over with a decoction of box-wood, which she readily did, without the addition of any other drug. Using no precaution to secure her neck and face, hair of a chefnut colour grew in effect on her head, as she was told it would; but her whole neck and face were also soon covered with red hairs, which made her fo deformed, that she appeared little different from an ape or monkey. A physician advised her to apply to her face and neck, a depilatory of the relin of the larch-tree, mixed up with that of mastich: but we have not yet learned what effect this remedy has produced on her.

Of a Stone, that, like the Chameleon, bas the property of changing its colour, in certain circumstances.—
From the Ephemerides of the Curious.

M. Andrew Chons of the court of the physicians of the court of having been Poland, relates, that, having been at Thorn, a famous lapidary there shewed him, among other curiofities, a stone, called by some the mineral polypus, about the fize of a large pea, and of an ash colour. What was wonderful in this stone is, that, though opaque, and having no transparent part, after being laid in water, it began, in less than fix minutes, to appear shining at the edges, and to communicate to the water a fort of luminous shadow, of the colour of yellow amber: it afterwards passed from yellow to the colour of an amethyft, and from thence successively to black, white, and a cloudy colour, and, as it were, furrounded with smoke. At last it appeared quite brilliant, intirely transparent, and of a very beautiful yellow-amber colour. Taken out of the water, it returned to its former opaque state, after being coloured fuccessively, and in a retrograde order, with the same dyes it had before assumed in the water.

The doctor adds, that this stone is natural, and not a production of art; and that it also may be regarded as a proof of the existence of a formal light in nature.

Description of a new mineral.

IT may be reasonably doubted, whether mankind will ever know all the riches of nature. Every cen-

tury,

sury, every age, every country is diftinguished by new discoveries, and the time present in this article always adds to the time paft. The mineral lately found in the neighbourhood of Gera in Voigtland, a province of Saxony, is an incontestible proof of this affertion. appears in form of a pretty ftrong vem, leaning against a mountain. No person hath as yet presumed to define or impose a name upon it, either old or new; because its properties are fo peculiar, that when fome people find an analogy between it and certain minerals, others perceive very confiderable differences between them. It is a very dufty fubstance, extremely white, refembling chalk, or the whitest terrestrial marrow, a quality without which it would be taken for the tale of filver (lapis talci argenteus) for it feels fat to the touch. It is wied as paint by the ladies, and can meither be altered or impaired by fire : but the tale of filver is ufually greenish, and that of gold yellow: befides, tale is flinty, and All thefe found in large pieces. qualities do not center in this new mineral, while it hath others which we don't find in talc. A learned and indefatigable mineralist and chemist has endeavoured, by all possible experiments, to discover the properties, and determine the true use of this substance : and these are what he has already ascertained: 1. The mineral is very proper for polifhing gold and filver : it leaves not one scratch, and takes away every thing that can stain these metals. 2. It fuffers no change in the fire, and cannot be brought to fusion. 3. In consequence of this last quality, it may be used for the fmelting and separation of metals. 4. It makes an excellent wash for the fkin, which it won. derfully cleans and foftens, having nothing correlive in its composition 5. Being put in water, it inflands diffolves. 6. Being diluted with 1 great quantity of water, it may be used as varnish to figures of plaister, which afterwards appear as if the were filvered. 7. It may be used for drawing on paper like lead ore: the strokes of it are foft, substantial, and shining, and extremely proper for drawing flowers to be coloured and painted. 8. It yields a very fine magisterium, infinitely fuperior to that which is prepared from marcasite, and affords an incomparable white for the ladies, 9. It may be used by organ makers, to fmear the fustian of their moulds, which, by that means, will be preferved in the furnace, without being burnt fo foon as it commonly is. 10. It gives a polish to the or-gan pipes, like that of filver. A person of learning, to whom we communicated this paper, being justly struck with the qualities of fuch a mineral which melts in water, and refifts fire, thinks he percerves in it fome refemblance to a mineral mentioned by Samuel Northon, who calls it Electra.

Th

Strange effects of Sea-water on Cast Iron .- From the Memoirs of the Royal Academy of Sciences at Paris, for the year 1756.

IN the month of July 1756, there were fished up, in the road of La Hogue, within musquet shot of Fort Lillet, four iron guns, one of which was a fixteen-pounder, part of the wreck of M. de Tourville's fquadron, to which that general fet fire

on the 29th of July, 1692; and which, confequently, had lain in the water fixty-four years. M. Morand, jun. had the curiofity to examine them; and fent the following account to the Royal Academy of Sciences at Paris.

t fire

The guns were covered, both without and within, with a crust of mud mixed with sand, &c. This crust being taken off, the cannon were found to be as soft as tin: but after being exposed to the air for twenty-four hours, they resumed their former degree of hardness, and bore the largest charges three times successively, without being suffered to cool, tho' besides the balls, they were loaded with a number of slints on purpose to try them.

Becher, and some other authors, have given some interesting hints on the properties of marine salt; which may serve to explain this phænomenon: but as this is only a single sact, Mr. Morand doth not pretend to account for it, contenting himself with relating the cir-

cumftances.

Observations on the Salamander, by Matthias Tilingius, a member of the Academy of the Curious in Germany.

SOME years ago, when I was a fludent in physic at Rostock, being out herborising in a wood in the neighbourhood of that town, I found a land salamander, which was black, and spotted with yellow, like a lizard. I was pleased to have an opportunity of trying whether this insect could effectually resist the heat of fire; and, as soon as I same home, I threw it accordingly

into the fire, but it was in a short time burnt, and reduced to ashes.

The ancients have told us a great number of fables concerning the falamander, and, among others, that it remains unhart by the activity of fire. Some authors have indeed afferted, that the falamander refifts not only the heat of fire, but that it lives in it as its own element, and feeds and thrives upon its fubitance. Some others have thought it enough to fay, that the falamander can live for some time in fire, without being burnt, because, at first, the aqueous exudation, caused by heat, from its body, extinguishes the fire; but if the fire should be rekindled, or its heat increased, it would be burnt and confumed. Others, in fine, have maintained with more reason, that nothing is more contrary to falamanders than fire, being confumed and reduced to ashes, foon after they are thrown into it. is verified not only by the following observations, but by those of feveral modern authors.

For my part, I am persuaded, that what has given room to fo erroneous an opinion, which paffed from ancient authors, who copied one another, to the moderns, is, that formerly this infect was known no otherwise than by its name: hence, we may account for the monftrous paintings and descriptions that have been made of it, sometimes representing it with the head of a sheep, and sometimes with the head of a ferpent; fometimes cloathed with a lanuginous skin, and fometimes with a fealy fkin, rough, oily, &c. One author puts it in the class of worms; another in that of spiders; so that those descriptions and paintings no more

4

resemble the salamander, than the ass does the horse, or the owl the parrot.

I should be inclined to embrace the second opinion, if the observations I made did not feem very contrary to it. I cannot indeed aver it for matter of fact, that the falamander that I threw into the fire, lived therein one moment: for, having repeated feveral times the experiment, in presence of some learned men, I observed, that so foon as I laid them on the coals, after struggling a little to fave themfelves, they gaped and expired; fo that it always appeared to me that they could not bear the heat of fire, during the shortest interval of time. It is true, they remained afterwards pretty long before they were confomed, because a plentiful exudation of milky liquor oozed from all the pores of their skin, as others have already observed, which diminished the activity of the fire for fome moments; but, as this moifture acquired a thicker confiftence, the falamander became less, and, wasting away by degrees, was at last reduced to ashes.

Now, what is there in this extraordinary, or particular to falamanders? Does not the same thing happen whenever a bit of raw flesh is put into the fire, or even wood, which are not inflammable till the humidity contained in them is evaporated? Without paying therefore any regard to the authority and superstitious stories of the ancients concerning salamanders, it may be confidently afferted, pursuant to experience, that falamanders, instead of living in fire as in their own element, inflead of being nourished with fire, and extinguishing it by a property peculiar to them, furely die in it, and are confumed in a short a time as all other animals.

If any, still prepossessed in favour of the ancients, cannot persuade themselves that their opinion can be thus destitute of all foundation, it must be supposed, that in such case, they had in view the metaphorical salamander of the chymists, or the amianthus, which some have called by the name of salamander.

An Account of a Treatise in Latin, presented to the Royal Society, intituled, A Dissertation on the surprising degree of artificial cold, by which Mercury was frozen, By J. Braun, of the Academy of Sciences, &c. Read at a meeting of the Royal Society in the month of May, 1761, and extracted from vol. lii. part i. of the Philosophiphical Transactions for the same year.

To the Royal Society.

Gentlemen,

TERY early last year, we were informed, that at Peterssburg, by the means of artificial cold, the mercury in thermometers had been condensed to so great a degree, as to become perfectly fixed and folid: but as this information was received only in a loose way, from the public gazettes, the opinions of philofophers here were suspended, in relation to their giving credit to this very extraordinary phænomenon, until the truth of it could be fuffi-This has ciently authenticated. very lately been done by Professor Braun, who first made the experiments, and who presented an account of them to the Royal Academy at Petersburg, a printed copy of which has been communicated by him to the Royal Society.

Professor Braun observes, that every age has its inventions, and that the discovery of some things feem to be referved for particular persons. To this, the history of fciences in all ages, more particularly of the late and the present, bears witness sufficiently, by the invention of the air-pump, barometers, thermometers, optical inftruments, electricity, more particularly the natural, artificial magnets, phosphorus, the discovery of the aberration of light, and of many other things in natural philosophy. He does not know, whether the congelation of mercury, which it was his good fortune to discover, may not be ranged among these: for who did not confider quickfilver, as a body, which would preferve its fluidity in every degree of cold? Neither was the fact otherwife, if this is understood of natural cold, fuch as it has been found in any part of the globe, hitherto discovered. But if it should happen, that the natural cold should ever be so intense as artificial cold has been found to be, the whole globe would have a different face, as men, animals, and plants, would certainly be destroyed. He did hint some time fince, in a differtation upon the degrees of heat, which certain liquors and certain fluids would bear before they boiled, and the degrees of cold they respectively bore before they were converted into ice, that there was a suspicion, that the mercury in some of the barometers and thermometers made use of for experiments in Siberia had been frozen: but fince that in greater degrees of cold, the

mercury continued fluid in other barometers and thermometers, the immobility and hardness observed in fome of these instruments was attributed more probably to the lead or the bifmuth, with which the mercury had been adultered. and was not confidered as a real freezing of the mercury: but this has been fince put out of all doubt; fince it is certain, that pure mercury would not freeze under fuch fmall degrees of cold, great as they were for natural cold. The experiments, which the professor made, in order to congeal mercury, demonstrate this most evidently; besides which, they exhibit new phænomena.

There happened at Petersburg, on the 14th of December, 1759, a very great frost, equal, if not more intense, than any which had been observed there: for, between nine and ten o'clock in the morning, Delisse's thermometer stood at 205; at feven o'clock, at 201; which last was the greatest degree of cold, that had been observed at Peterfburg, either by himself or others. At one o'clock at noon, the thermometer flood at 197. Mr. Braun had been employed, feveral days before this, in observing the feveral decrees of cold, which different fluids would bear, before they were converted into ice; partly to confirm those things which he had already laid before the academy; and partly to make experiments upon liquors, which had not yet been examined; as on the days between the 7th and 14th the cold was intense enough to be between the degrees of 181 and 191.

When the natural cold was for intense as to be at 205, Professor Braun conjectured, that it was of all others the most proper occasion

to try the effects of artificial cold; not doubting, but that artificial cold would be increased in proportion as the natural was more intenfe: Aquafortis, which was found by the thermometer to be 204 degrees cold, was the greatest part of it frozen, the ice having the apcearance of crystals of nitre; which, however, immediately diffolved in a fmall degree of heat. This aquaforeis, which though frozen at the fides, was liquid in the middle, was poured upon pounded ice, in that proportion which was directed by Fahrenheit, the first person who made artificial cold with spirit of nitre. Bue before the professor made this experiment, he, by examination, found, that both the ice and aquafortis were of the temperature with the air, which was then 204. Upon the first pouring, the mercury fell 20 degrees; this spirit was poured off, and fresh put on, feveral times; but it was poffible, by these means, to introduce no more than 30 decrees of cold; so that the mercury in the thermometer fell no lower than 234. Since therefore Fahrenheit could not produce cold greater than that of 40 below the cypher of his thermometer, which corresponds with 210 of that employed by Professor Braun; nor Reaumur, nor Muschenbroek, who often repeated the fame experiment, our author was upon the point of giving up this pursuit; as considering this as the greatest degree to which artificial cold could be carried; thinking it fufficient bonour to himself, to have added 20 degrees to the cold formerly known.

But reflecting, that this was not all the fruit he expected from these experiments, he determined to pur-

fue them; but at the fame time however, to vary the manner of them. By good fortune, his ice was all gone, and he was compelled to use snow in its stead, at ter having first tried, and found the fnow of the same degree of cold with the air, at this time 201. The fnow, the thermometer, and the aquafortis, being of the fame temperature, he immersed the ther. mometer in fnow, contained in a glass; and, at first, only poured a few drops of the aquafortis upon that part of the fnow, in which the thermometer was immerfed; upon which he observed the mercury to fubfide to 260. Elated by this remarkable fuccess, he immediately conceived hopes, that their experiments might be carried further: nor was he deceived in his expectations; for repeating the experiment in the fame fimple manner, he poured on only some more aquafortis, and immediately the mercury fell to 380. Upon which he immersed the thermometer in another glass filled with snow, before it had loft any of this acquired cold; and at length, by this third experiment, the mercury subfided to 470 degrees. When he observed this enormous degree of cold, he could scarce give credit to his eyes, and believed his thermometer broke But, to his infinite fatisfaction, upon taking out his thermometer, he found it whole; though the mercury was immoveable, and continued fo in the open air twelve minutes. He carried his thermometer into a chamber, where the temperature of the air was 125 degrees; and, after some minutes, the mercury being restored to its suidity, began to rife. But to be certain, whether this thermometer had received

The thermometers, which our thor usually employs, have a herical bulb, and their scale is dided into 1200 parts, of which o are above the cypher, which notes the heat of boiling water, d 600 below that heat. A therometer of this conftruction was ed in investigating the heat of iling mercury and oils. He had other thermometer, of which the le went no lower than 360 dees below the cypher, denoting e heat of boiling water. He reated the former experiment with is, and the mercury very foon deended fo, that the whole was conined in the bulb, which, however, did not quite fill. The mercury this bulb was immoveable, even ough he shook the thermometer; til about a quarter of an hour, it gan to ascend in the open air; dit continued to afcend, till it came higher than the circumament air seemed to indicate. as firuck with this extraordinary znomenon, and very attentively oked at the mercury in this therometer, and found certain air bbles interspersed with the merry, which were not in that of the er thermometer. From thefe, d other experiments (it would be necessary to recite them all) he is fatisfied, that the mercury in the thermometers had been fixed d congealed by the cold.

Hitherto our professor had only en the mercury fixed within the all of his thermometers. These he was unwilling to break. He was, however, defirous of examining the mercury in its fixed flate, and therefore determined to break his thermometers in the next experiments. It was feveral days before he got other thermometers, which exactly corresponded with those he had already employed.

When these were procured, the natural cold had fomewhat relented. In the former experiment, the thermometer stood at 204; it was now at 199. In making the experiment, he varied the manner a little. He first put the bulb of the thermometer into a glass of fnow. gently pressed down, before he poured on the aquafortis; he then. in another glass, poured the aquafortis upon the fnow, before he immerfed his thermometer therein; he then, in like manner, put the fnow to the aquafortis, before he put his thermometer therein. Which ever of these ways he proceeded, he found the event exactly the fame; as the whole depended upon the aquafortis dissolving the snow. When he had proceeded fo far, as to find the mercury immoveable, he broke the bulb of the thermometer, which had already been cracked in the experiment, but the parts were not feparated. He found the mercury folid, but not wholly fo, as the middle part of the fphere was not The external convex yet fixed. furface of the mercury was perfectly fmooth; but the internal concave one, after the small portion of mercury, which remained fluid, was poured out, appeared rough and uneven, as though composed of small globules. He gave the mercury several strokes with the pestle of a mortar, which stood near him. It had folidity enough to bear ex-

tenfion

tension with these strokes; its hardness was like that of lead, though somewhat softer; and, upon striking, it sounded like lead. When the mercury was extended by these strokes, he cut it easily with a penknise. The mercury then becoming softer by degrees, in about twelve minutes it recovered its former shuidity, the air being then 197. The colour of the congealed mercury did scarce differ from that of the shuid: it looked like the most polished silver, as well in its convex part, as where it was cut.

The next day, the cold had increased to 212 dagrees, which was degrees beyond what it had ever before been observed at Petersburg. The feafon so much favouring, he thought it right to continue his purfuit, not only in further confirmation of what he had already obferved, but to investigate new phanomena. In two thermometers, he observed the same facts in relation to the congealing of mercury, as he did the preceding day. In the bulbs which he broke, the whole of the mercury was not fixed, as a very small portion, much less than that of the preceding day, con-tinued fluid. He treated this mercury as he did the former; he beat it with a peftle; he cut it, and every thing was thus far the fame. But he saw a very great difference in relation to the descending of the mercury in the thermometer, the like of which did not occur to him, neither in the former, nor any of the subsequent experiments. From the former ones it appeared, that the mercury in the first experiment had only descended to 470, when it became immoveable, though the glass bulb was not cracked. In the experiment of the 25th, it de-

feended to 530; and in two then mometers on the 26th, to 650. B as well in the thermometer, which he used on the 25th, as in two the 26th, the bulbs were cracke in the experiment: they cohere however; nor was the least part of the bulb separated, but the congealed mercury seemed to adhere a all parts of the bulb. In the fo lowing experiments, he invariable found, that the mercury funk lower if the whole of it was congealed than if any part of it remains fluid. It then generally descende to 680 and 700, but the bulbs wer never without cracks; moreover, descended to 800, and beyond en to 1500; but in this last expen ment, the bulb was quite broke, that the globe of mercury, the roughly frozen, fell out, and by fall, of about 3 feet, the globe mercury became a little compressed but in the former, only some part of the bulb fell off.

Vor. V

Mr. Braun always found, that cæteris paribus, the more intentate the natural cold was, the more eaf and more expeditiously these experiments did succeed.

In continuing these experimen he observed, that double aquafort was more effectual than fimple if rit of nitre; but that if both the aquafortis and Glauber's spirit nitre, which he fometimes also use were well prepared, the different was not very confiderable. Whe his aquafortis was frozen, which often happened, he found the fan effects from the frozen parts, who thawed, as from that part of which remained fluid in the midd of the bottle. Simple spirit of n tre, though it feldom brought the mercury lower than 300 degree by the following method he et

froze mercury with it. He filled ix glaffes with fnow, as usual, and out the thermometer in one of hem, pouring thereupon the fpirit faitre. When the mercury would all no lower in this, he, in the ime manner, put it in a second, hen in a third, and fo in a fourth; which fourth immersion, the

ercury was congealed.

Another very confiderable differce presented itself in pursuing ele inquiries, with regard to the node of descent of the mercury. He constantly and invariably observd, that the mercury descended at in gently, but afterwards very ra-idly. But the point, at which is impetus begins, is not easy to kertain; as in different experiunts it begins very differently, and metimes at about 300, at other es about 350, and even further. the experiment before-mentiond, in which the mercury fell to 00, it proceeded very regularly to 00; about which point it began descend, with very great swifter wes broke. The mercury, vever, was perfectly congealed. He frequently observed another narkable phænomenon; which that although the spirit of tre, the fnow, and the mercury the thermometer, were previously duced to the same temperature, on pouring the spirit of nitre on the fnow, the mercury in the mometer rose. But as this did talways happen, he carefully ated to every circumstance; from hich it appeared, that this effect he from his pouring the aquaforimmediately upon the bulb of thermometer, not previously immersed in the snow. He wife observed another effect, Vol. V.

twice only; and this was, that, after the thermometer had been taken out of the fnow and aquafortis, the mercury continued to subside, in the open air, down as low as the

congealation of mercury.

In the course of these inquiries. our professor found no difference, whether he made use of long or short thermometers; whether the tubes were made of the Bohemian. or the glass of Petersburg. the fame circumstances, the same effects were also produced, making an allowance for the different contraction of the different glasses, under so severe a degree of cold. But if these tubes were filled with different mercury, there was then a fenfible difference; inafmuch as mercury revived from sublimate did not subfide so fast in the thermometer, as that did, which was less pure. He has even found, that he has been able to congeal the less pure mercury, at a time when he could not bring the revived mercury lower than 300 degrees: but this he would, till farther trials have been made, not have confidered as a general axiom.

From these experiments, our author conceives it demonstrated, that heat alone is the cause of the fluidity of mercury, as it is that of water and other fluids. If, therefore, any part of the world does exist, in which fo great a degree of cold prevails, as to make mercury folid, there is no doubt, but that mercury ought to appear there as a body equally firm and confiftent, as the rest of the metals do here: that mercury, upon congealing, becomes its own ice, however different the mercurial ice may be from that of water, or other liquids. The idea of freezing does or can comprehend nothing

nothing more than a transition of bodies from a state of shaidity to that of firmness by the sole interposition of cold.

The ice of oily and faline bodies differs greatly from that of water, which is friable and eafily broke, whereas that of mercury is duclile. And M. Braun proceeds to confider all bodies, which liquify by heat, as so many species of ice; so that every metal, wax, tallow, and glass, comes within his view in this respect.

Mercury then is, in its natural state, a folid metal; but is fusible in a very fmall degree of heat. Every metal begins to flow in a certain degree of heat; but this degree is different in different metals. Pure tin begins to run at 420; lead, at 530; and bifmuth, at 470, in Fahrenheit's thermometer : or, according to our author, lead liquifies at 320 above the cypher in his scale, which corresponds with 596 in Fahrenheit; lead at 170=416 of Fahrenheit ; bifmuth at 235=494; zinc requires a greater heat to melt it than will make mercury boil. Now, if it could be fettled, at what point mercury would begin to be congealed, we should know the point at which it began to flow; as it has been long known, that water is either fluid or folid, as the heat of it is a very few degrees above or under 32 in Fahrenheit's thermometer. Just so metals become solid, at almost the same degree of heat in which they become fluid. But in mercury, the congealing point is at too great a latitude to be exactly determined; but our author estimates it to be about 469 degrees in his thermometer; at a less degree than which, he has not been able to observe the slightest congealation. Hence it follows, that the

condensation or contraction, and confequently the diminution of the volume of mercury must be very great indeed. This is demonstrated by the great descent of the mercury in the thermometer, while it is freezing. But how great this diminution of the volume of the mercury is, cannot exactly be determined; and hence arises no small difficulty in determining its specific gravity, as this last must increase, as the bulk of the mercury leffens. Hence as mercury, even in in fluid state, comes of all bodies, platina excepted, the nearest to gold; in its folid ftate, it muft ftill ap proach much nearer.

Our author had three thermome ters filled with the most highly to tified spirit of wine. These no only corresponded exactly with on another, but, in less severe trials corresponded reasonably well with those fitled with mercury. But b the mixture of fnow and spirit nitre, which froze the mercury, h never was able to bring the ipin thermometers lower than 300 From hence it appears, that the cold, which will freeze mercun will not freeze spirit of wine; an and that therefore spirit thermom ters are the most fit to determin the degree of coldness in frigori mixtures, until we are in a fituation to construct folid metallic therm meters with fufficient accuracy.

Our author made many experiments, to try the effects of different fluids, in his frigorific mitures. He invariably found, the Glauber's spirit of nitre and doub aquafortis were the most powers With oil of vitriol, the most ponerous of all acids, he was never at to congeal mercury. He likewit tried a great number of other fluid.

both acid and spirituous, which though, when mixed with fnow, produced cold, it was in very different degrees. He tried a feries of experiments to this purpose; but it was in weather far less cold than the preceding experiments were tried in, viz. between 159 and 153, by his thermometer. By these it appears, that spirit of falt pounded upon fnow, increased the natural cold 30 degrees; spirit of sal ammoniac, 10; oil of vitriol, 35; Glauber's spirit of nitre, 58; aquahnis, 40; fimple spirit of nitre, 30; fpirit of vinegar, and lemon juice, made no remarkable difference; dulcified spirit of vitriol, 20; Hoffman's liquor anodynus, 32; spirit of hartshorn, 10; spirit of sulphur, 10; spirit of wine rectified, 20; amphorated spirit, 15; French andy, 12; and even feveral kinds wine, increased the natural cold 6, 7, or 8 degrees. That inammable spirits should produce bld, feems very extraordinary, as edified spirit seems to be liquid re itself; and what still appears ore paradoxical is, that inflammale spirits poured into water, cause eat; upon fnow, cold: and what swater, but melted fnow?

Though not immediately relating the principal purpose of this ratife, our author measured by in thermometer, when it stood in its study at 128 degrees, the heat casened by pouring different flushinto water. He sound, that oil si without produced 35 degrees; int of sea salt, 10; Hossman's todyne liquor rectified, 5; spirit swine, 10. On the contrary, spinos salt ammoniac mixed with lim, spirit of sulphur, and spirit sharshorn, mixed likewise with lim, made no perceptible diffe-

rence. Highly reclified chymical oils, mixed with water, produced no heat; nor with snow, no cold; as was tried in the oils of turpentine, amber, mint, and mother of thyme. And here it is to be remarked, notwithstanding the contrary has been given out by some, that these chymical oils mixed with the most highly rectified spirit of wine, do produce no cold, either upon their mixture, or half an hour after.

It refults from these experiments, that although there are many liquids, which can produce artificial cold, the nitrous acid is the most powerful; and mercury may be congealed by it, without any difficult process, at any time, when the heat of the atmosphere is not greater than 175 by the thermometer before-mentioned. And these experiments have not only fucceeded with our author, but with many others; among whom, it may be fufficient to mention Meffieurs Lomonosow, Zeiher, Aepinus, and Model, as these gentlemen have made themselves well known in the philosophical world. The nitrous acid was poured upon the fnow, in no determinate quantity; fometimes a few drops were fufficient, sometimes it required a larger quantity. Snow feems to be more fit for those experiments, than pounded ice; as the former, from its loofe texture, is of more apt and eafy folution.

Hence it appears, that mercury is no longer to be ranked with the femi-metals, but as a perfect one, fufible, though with a much less degree of heat than any of the others. It agrees likewise with other metals; as their parts like it, when in fusion, attract one another, and run into globules, and, from a state

G 2

of fluidity, pass into a solid state, not all at once, but successively, and vice verfa. But it is not worth inquiring, whether this metal, which agrees with all others, both in a folid and fluid state, has not the particular property of boiling at a certain degree of heat, which is by no means to be observed in other metals. The degree of heat, in which mercary begins to boil, is not at 600 of Fahrenheit's scale, as is generally imagined; but at least at 700 of the same scale, which corresponds with 414 of our author's, whole cypher is at the heat of boiling water.

Both the boiling and freezing of mercury have this in common; that when it begins to boil, it rifes with rapidity; and descends rapidly, If, when it begins to freeze. therefore, the mean term of the congealation of mercury is fixed at 650 below the cypher, and the term of its boiling at 414 above the cypher; its greatest contraction to its greatest dilatation, will be 1004 degrees of our author's thermometer. and 1217 of Fahrenheit's; as 212 is the point of boiling water in this laft, and 32 the freezing one; which corresponds with 150, under the term of boiling water, in our author's. Hence every one will fee the great alteration of specific gravity in frozen and boiling mercury, as, between one and the other; the tenth part of the volume is lessened.

It may be aked, why the mixture of fnow and nitrous acid does not run into a folid male, and form itself into ice, but remain of a foft confidence, although actually much colder, than what is required to freeze aquafortis? We have already mentioned, that aquafortis freezes at 204 of our author's thermometer, which corresponds with 34 be-

2216W

low the cypher of Fahrenheits. The frigorific mass, in a degree of cold far below this, remained soft like a pultice. The cause of this extraordinary phanomenon seem to be no other than a continuation of the solution of the snow, and is mixing with the nitrous acid. For as the production of cold depend solely upon the solution and mixture, it cannot happen, that the mass, which constitutes a sluid of a hard kind, should run into a solid consistence, so long as the solution and mixture cotinnue.

ATSON.

CT

Eing informed that Mr. Collinfon's garden on Mill-hill, near lendon, in Middlesex, was celebrafor a collection of foreign trees, abs, and flowers; and having acred fome knowledge in thefe logs by my travelling about, I demined to take it in course, and, I ficonfess, I was highly entertained th feeing fo many new and rare tes and plants. Among others, was shewn a China mulberry tree, th had been raifed by him from ed: it is called in Japan the pamulberry tree, because from tree is made the greatest quanof the paper that they use. I fantly thought, why not make per of it here as well as there? rags may grow scarce and dear, tree may supply that defect, for is very flourishing, and easily in-

I took a branch of the tree to pare it with the Japan mulberry, duibed and figured by Dr. Kemp-

fer's Amanitatum exoticarum, fol. 473, and found it agreed exactly in every respect.

apedity c and descends rapidly,

the all at once, but successively, and

We are much beholden to that eminent traveller, for giving us a description of the Japanele art of paper-making, which is here inferted, in hopes it may affift the ingenious artiff to make the experiment, to whom I heartily wish fuccefs. Yours, &c.

AMES WRIGHT.

A description of the manner in which the Japanese make Paper of the bark of a tree.

PAPER is made in Japan of the bark of the Morus Papyrifera Sativa, or True paper tree, after the following manner: Every year when the deaves are fallen off, or in the tenth Japanele month, which commonly answers to our December, the young shoots, which are very fucculent, are cut off into flicks about three feet long, or lomething lefs, and put together in bundles to be afterwards boiled with

G 3

water and afhes. If they fhould grow dry before they can be boiled, they must be first soaked in common water for about 24 hours, and then boiled. These bundles, or faggots, are tied close together, and put upright into a large kettle, which must be very well covered, then they are boiled till the bark thrinks fo far as to let about half an inch of the wood appear naked at the top. When the flicks have all been fufficiently boiled, they are taken out of the water, and ex-posed to the air till they grow cold, then they are flit open lengthways for the bark to be taken off, which being done, the wood is thrown away as plelefs, but the bark dried and carefully preserved, as being the substance out of which they are in time to make their paper, by letting it undergo a further preparation, confilling in cleanfing a new, and afterwards picking out the better from the worle. In order to this, it is foaked in water three or four hours, and being grown fost, the blackish skin which covers it is scraped off, together with the green furface, of what remains, which is done with a knife, which they call Kaadh Kufaggi, that is, a Kaadsi razor; at the same time also the stronger bark, which is a full year's growth, is separated from the thinner, which covered the younger branches, the former yielding the best and whitest paper, the latter only a dark and indifferent fort. If there is any bark of more than a year's growth, mixed with the reft, it is likewise picked out and laid afide, as yielding a coarfer and worse fort of paper; all gross knotty particles, and whatever elfe looks in the least faulty and discoloured, is picked out at the fame

time, to be kept with the last coarse

thing I

After the bark has been fuffel. ently cleanfed, and prepared and forted according to its differing de grees of goodness, it must be boiled in clear lye. From the time it be gins to boil, they keep perpetually flirring it with a strong reed, pour ing from time to time fo much free lve in as is necessary to dense the evaporation, and to supply whath been already lost by it; boiling must be continued till a matter is grown so tender, the being but slightly touched with a finger, it will diffolve and fepara into flocks and fibres. Their is made of any fort of ashes, in following manner: two pieces wood are laid across over a tub a covered with ffraw, on which the lay wet aines, and then pour be ing hot water upon it, which, it runs through the firaw into tub underneath, is embued with the faline particles of the ashes, a makes what they call lye.

After boiling the bark as abo described, follows the washing it, which is of no small consequen in paper-making, and must be a naged with great judgment and tention; if it hath not been wall long enough, the paper will ftrong, indeed, and of a good boo but coarfe, and of little value; if, on the contrary, the washing been too long continued, it afford a whiter paper, but foch will not bear ink. This part paper-making, therefore, mult managed with the greatest care judgment, fo as to keep to am dle degree, and avoid either They wash it in a m treme. putting the bark into a fort of fe which will let the water run the

nd firring it continually with the ands and arms, till it comes to be filuted into a delicate foft pulp, or nucilage. For the finer fort of paer the washing must be repeated; nt the bark must be put into a piece of linen, instead of a fieve, pecause the longer the washing is matinued, the more the bark is fivided, and would come at last to e fo thin and minute, that it would un out at the holes of the fieve and loft, and at the same time also, hat hard knots or flocks, ther heterogeneous useless partides remain, must be carefully picked out, and put up with a coarier fort of bark for worse paper. The bark having been sufficiently washed, is out upon a thick, fmooth, wooden able, in order to its being beaten with sticks of the hard Kusniki good, which is commonly done by two or three people, until it is wrought fine enough, and becomes withal to thin, as to refemble a pulp of soaked paper, which being put into water, will dissolve and disperse like meal. The bark be-ing thus prepared, is put into a parrow tab, with the fat flimy infufon of rice, and the infusion of the may root, which likewife is very may and mucilaginous. These Thele three things being put together must be stirred with a thin clean reed, till they are thoroughly mixed and wrought into a uniform liquid fabiliance, of a good confiftence; this succeeds best in a narrow tub, but afterwards the mixture is put into a larger one, which is not unlike those made use of in our papermills; out of this tub the leaves are taken off one by one, on proper patterns made of bulrushes, inhead of brass wire, called Mys. Nothing remains now but a proper

management in drying of them; in order to this they are laid up in heaps, upon a table covered with a double matt, and a fmall piece of reed is put between every leaf, which standing out a little way, ferves, in time, to lift them up conveniently, and take them off fingly. Every heap is covered with a fmall plank or board, of the fame shape and fize with the paper, on which are laid weights, first, indeed small ones, left the leaves, being then wet and tender, should be pressed together into one lump, but, by degrees, more and heavier. to press and squeeze out all the water. The next day the weights are taken off, the leaves are lifted up one by one, by the help of the fmall flick above-mentioned, and with the palm of the hand, clapped to long rough planks made for this purpose, which they will easily stick to, because of the little humidity still remaining. After this manner they are exposed to the fun, and when quite dry, taken off, laid up in heaps, pared round, and so kept for use or fale.

I took notice that the infusion of rice, with a gentle friction, is neceffary for this operation, because of its white colour, and a certain clammy fattels, which at once gives the paper a good confistence, and pleafing whiteness. The fimple infufion of rice-flour will not do it, because it wants that clamminess, which however, is a very necessary quality. The infusion I speak of is made in an unglazed earthen pot, wherein the rice grains are foaked in water, and the pot afterwards shaken, gently at first, but stronger by degrees; at last, fresh cold water is poured upon it, and the whole percolated through a piece of

G4 Do Donald M

limin and The remainder must go under the faine operation again, fresh water being put to it, and this in repeated follong as there is any clamminess remaining in the rice. The Japanese rice is by much the hest for this purpose, as being the whitest and fattest fort growing in Asia.

The infusion of the oreni root is made after the following manner; the root pounded, or cut small, is pat into fresh water, which in one night's time turns mucilaginous, and becomes he for ufe, after it has been strained through a piece of linen. The different featons of the year sequire a different quantity of water to be mixed with the root. They fay the whole are depends entirely upon this In the fummer, when the sof the air diffolyes the jelly, and makes it more fleidia greater quantity de required, and lefe in propote tion in the winter, and in cold weaer acomuch of this infulion mixed with the dotter ingredients, will make the paper thinner in proportion anton dittle, on the contrary, will make it too thick, therefore a middle quantity is required to make a good paper; and of an equal thicknels is however, upon taking out a few leaves, they can eafily fee whether they have put too much or too little of its Instead of the ereni root, which fometimes, at the begipping of the fummer, grows very caree, the paper-makers use of a creeping thrub called fane kadfura, the leaves whereof yield a mucilage in great plenty, though not altogether fo good for this purpole, as the mucilage of the above mentioned areni root I have also mentioned the juneus fativum which is cultivated in Japan with great care and andustry dit grows itall, thin, and

It hath been observed above, hat when the leaves are fresh taken of from their patterns, they are laid us in heaps, on a table covered win two matts. These two matts must be of a different fabric, one which lies lowermost is coarser, but the other, which lies uppermost, is this ner, made of thin, slender, bull rushes, which must not be twisted too close one to another, but so at to let the water run through with ease, and very thin, not to leave any impressions upon the paper.

A coarier fort of paper, proper to wrap up goods, and for fevera other uses, is made of the bark of the kadse kadsura shrub, after the method above described. panele paper is very tight and firong, and will bear being twifted into ropes. A thick firong fort of paper is fold at Siriga (one of the greatest towns in Japan, and the capital of the province of that name) which is very neatly painted and folded up, so much in a piece as il wanted for a fait si it looks to like filken or woollen fuff, that it might be mistaken easily for them. A thin neat fort of paper, which had a yellowish cast, is made in Chint and Tonquin, of cotton and bam bons : at Siam, the Samnites make their paper of the bark of the Pline kloi tree, of which they have two forts, one black and the other white, both very coarfe, rude, and simple, as they themselves are. They fold it up into books, much after the fame manner fans are folded, and write on both fides, not, indeed with a pencil, in imitation of those more polite nations who live farthe cast, but with a rude stylus, mide

France:

of day. Thus far the description of the way of making paper in the east, which the late learned Becmanus was fo defirous to know, and to earnestly entreated travellers to enquire into, being, however, miffaken in supposing that it was made of cotton, whereas it evidently appears by this account, that all he nations beyond the Ganges make it of the bark of trees and hrobs. The other Afiatic nations on this fide the Ganges, the black inhabitants of the most fouthermost parts excepted, make their paper of old rags of coston fluff, and their method differs nothing from ours in Burope, except that it is more fimple, and the infruments they make other thes, is maderallorg sale rento

An Account of an Experiment lately made in France, to know if filk-worms would live there and work to advantage, in the open air. From the Memoirs de Trevoux for September, 1762.

the kedje kedjara ihrub, after the

method above deletibed. - Intel

TO know if filk-worms were as fenfible of the injuries of the weather, as the author of the Spectucle of Nature, or Nature Displayed, nagines they are (rom i.), about we've hundred of their inlects, all past their first moulting, were placed, the afteenth of April, 1761, on some espalier mulberry-trees, break high. di Here they remained, exposed to all the rigiour of the alon, which having been cold in the beginning, and afterwards very formy, left scarce any hopes of their doing well. 30 Neither wind or min, however, obliged them to take helter under the rails of the espaer, or the leaves of the tree. They endured every fourt of all

this bad weather on the fame foot where it furprised them, just remaining motionless as long as it lasted : the storm past, they began to move again very brifkly, devouring the leaves, though wet with the rain, without any feeming concern. Neither cold, moisture, heat, or thunder, made that impression upon them which there was reason to expect they would. Not one of them was attacked by any of these diforders, during which they are called fat worms, lean worms, yellow worms, &c. They always continued exceedingly white. Their moulting, indeed, was later and longer than it generally is, when they are kept within doors, but free from any bad confequences.

The greatest part of them perished for want of food, or rather for want of inftinct to go in quest of its Several died at the foot of the espalier, where the wind and hail had beat them from off the leaves. But it would be an easy matter to provide against the first of these inconveniences; by removing them from one part of the tree to another; an affiftance which few would require above thrice, during their whole lives," The fecond inconveniency would, indeed, require more attendance, which, after all, might be of no ale, as probably they receive fome hurt in their fall. It did not appear that the birds, though very numerous in the place where this experiment was tried, destroyed many of them.

These twelve handred worms yielded five handred and fifty cocoons, weighing two pounds and a half, Lyons weight, of fourteen ounces to the pound; and these cocoons produced above three ounces of the finest filk ever obtained in

France:

France: but one of the cocoons was faulty, and not one of them double; so that the operations requisite to get the filk from them was not attended with any waste. This method therefore, notwithstanding the loss of worms with which it was attended, appeared, on calculation, more advantageous, in regard both to the quantity and quality of the filk obtained by it, than that, usually followed, of feeding them within doors.

The use of Furze in fencing the banks of pivers. In a letter to the late Dr. Stephen Hales; and by him communicated to the Royal Society.

It (This seems worth) of being confirmed by further experiments.)

I doulers in those wines aid arelunded the

his medical vabilities

P Had occasion to inform you before that on observing a little had placed in the midft of a river, where the ftream was pretty rapid, I enquired into the caule, and found a furze bath lodged there, which had detained the fand, in fpite of the current, in It was eafily concluded from hence, that furze might be profitably used in fencing the banks of rivers at a very cheap rate, and thereby preventing many acres of rich foil from being changed into barren gravel. Several years after, I prevailed on some gentlemen of my acquaintance to try the experiment; which was fo cheaply done, and followed with fuch remarkable fuccess, that numbers foon followed their example; fo that it Is now almost universally practifed here; and, hitherto, has never been or memoriation ink, by others called

once known to fail in answering the defign. In pursuing the scheme, ! found, upon trial, that locks and dam-heads might be raifed, at one tenth of the ordinary expence, by the help of furze, as a very thin perpendicular wall of flone and Itme, or one of deal-boards, two inches, thick, is the principal part of the expence. Close to this wall, on the other fide, is a mound of furze intermixed with gravel, and along the top of the wall a ftrong beam, equal with the highest part of the mound. It is plain, this wall cannot be hurt by the weight of the water, or force of the current, as it is defended by the contiguous mound, which is fix or feven yards broad; nor can the pressure of the mud and gravel make it give way, as their weight is fuspended by the interweavings of the furze: if, therefore, the beam on the top of the wall can be made to keep its place, the whole is that the duft of beart, dried.mrif

It is well known, that they make their fea-dykes in Holland with faggots of any fort of brush-wood; and it must appear to any one, who examines the net-work formed by the crossings of the branches and prickles of furze, that it is far more effectual for this purpose, both as it detains the collected earth, and is far more cheaply procured than faggots.

I hope it will be eafily observed, from what has been faid of locks and dam-heads, that a great deal of expensive stone-work in building harbours may be avoided, by the

O make the hides of oxen, cows, 1 and calves, fit for the uses to which they are destined, they first usually receive a preparation called tanning: they are macerated in water, for dissolving any corruptible matter that may adhere to them, and, being depilated with quick lime, are thrown into heaps, with a dust made of the bark of young oak, and in some places of young pine which has been ground or pounded: this dust is called the tan. The defign of the last operation is for taking from the hides and fkins all the matter before diffolved by water, which might have occasioned the corrupting of the leather. M. Albert Geiner, first physician of the duke of Wirtemberg, having fancied that the dust of heath, dried in an oven, and afterwards pulverifed, might be a good substitute to that of oak-bark, had feveral successful experiments made with it; and he fent to the Academy some pieces of leather prepared by this method, which appeared very good. The only inconveniency he found in the ule of heath, instead of oak-bark, was the length required for the operation; but there is great reason to hope that M. Geiner's refearches will furnish him with means for abridging the operation, the principal cause of the dearness of tanned leather, and for perfecting in all respects this invention, which prelents some very evident views of utility, 1st, in lowering the price of tanned leathers by the substitution of heath, which very common,

and has scarce any value, to bark, which is often paid for at a dear rate; adly, in sparing woods and forests, whereof the trees are often cut down too young, or stripped to their great prejudice.

Method of discovering adulterations by lead, in wines, butter, &c.

M. Gaubius, physician to the Prince Stadtholder, and no less famed for his tender philanthropy than his medical abilities, has published a method for discovering the pernicious adulteration of some wines, by the mixture of

plumbagineous matter.

The great vogue, to which the Rhenish and Moselle wines are rifen, has too often induced the dealers in those wines to fosten the natural tariness of them, and render them more agreeable to the palate, by mixing lead with them: a cruel practice, which cannot be too carefully guarded against ! As lead, whatever be the which which conveys it into the flomach and entrails, excites disorders, the confequences of which are always very excruciating, and often fatal. An opinion had prevailed, that spirit of falt, and rectified oil of vitriol, afforded a fure detection of fuch villainy : But M. Gaubius having, by repeated experience, found those methods to have no fuch effect, or. at least, to be very fallible, has substituted another, which may be depended on, and is indeed made use of in some offices in Germany, as a test of the genuineness and salubrity of Rhenish wines. This is the fympathetic ink, by others called Liquor vini probatorius; the composition of which is thus: PulPulverize an ounce of orpiment and two ounces of quick time; and having well mixed them, put them it a glate tetort, with twalve ounces of very pure rain water: your retort must be well stopt, and kept in a moderate heat for twenty four hours, shaking it briskly every two hours; then the whole being settled and cooled, gently decant the liquor isto a bottle, which must likewise be closely stopped.

lastead of this digestive process, the effect will be the same, if the compound be boiled for half an

bour, but not beyond.

In order to be affored that you are right in your operation, drop a little of the liquor in fome vinigar of leads if it be good, the vinegar will immediately become turbid and blackith. This liquor being very volatile, the veffel in which it is keps much be operated as foldom as possible; and, after being kept some time, it is only strying it in the manner above mentioned, to know whether it fill preserves its efficiency, belied a radduld admentioned.

The trial of this detecting liquor, in Rhenish or Moselle wine, is in the following manner: Take half a glass of either of the faid wines, and pour on it some drops of sympathetic int; if the wine be neat, there will only arise a tenuious whitish cloud; but if it produces a red or blackish tinge, such wine may be concluded to have a mixture of lead, more or less, according to the deepness of the adventitious co-lour. Let it be observed, that, of all the several substances used in so-phisticating wine, it is only lead on which this effect is produced.

It sometimes happens that butter contracts a very noxious quality, by having been kept too long in leader vessels: when any such thing is apprehended, the same liquor will clear up the matter. Having dropped a little on the butter, let it be well heaten in a glass mortar: if the butter be impregnated with any plumbeous particles, it will soon turn of a dingy brown; otherwise it will keep its colour.

Method of clarifying train oil .

During the course of the experiments made to ascertain the efficacy of Mr, Doffey's method, a very ingenious gentleman carried home fome of the oil employed in that gentleman's experiments. Resolving to try what effect each ingredient used by Mr. Doffey might have on vicious oil, when uled fingly, he began with washing it frequently with water. This fueceeded far beyond his expectation; for the oil was brought to so great a degree of fweetness, that many doubted whether it was part of that which he had taken home with him. The experiment was repeated at the request of the fociety, but at an improper feafon, viz. in November, when the cold had rendered the oil so thick, that water could not act upon it with the fame" efficacy as in the month of July, when the first experiment was made.

This gentleman contrived an infirument very proper for the purpose, viz. a barrel churn, which might contain about fix gallons. The churn may be made of any

In our last volume we gave (page 142) fome receipts for edulcorating trainoil, by Mr. Dossey, approved by the society for the encouragement of arts, manufactures, and commerce.

fize.

the There were in it four rows of narrow split deals, from the centre to the circumference, each piece fet at obtuse angles to the other, in order to give different directions to the oil and water as the churn turned round, thereby to mix them more intimately. By this means the water acted with great force on every substance mixed with the oil. which was foluble in water; or, if not eafily foluble in water, it adhered to them, and rendered them Thus every heavier than the oil. other animal substance subsided, and left the oil pure and fweet.

In order to perform this experiment, the chorn is turned fwiftly round for a few minutes. Lt then remains at rest till the oil and water feparate; which in fummer, generally is in lifteen or twenty minutes. When the water is drawn off, fresh water is again added to the oil which is repeatedly washed in the fame manner, till the water comes of pretty clear and fweet. The whole is drawn off, after the last washing, anto an open vessel, in oil separate. After they have flood two or three days, there is found betwixt the oil and the water a geboth.

weet, or free from patrefaction, uces mixed with it in boiling the blubber. We know that all other animal juices are foluble in water,

ture or qualities of oil. Hence water feems much more proper for the purpole of edulcorating vicious oil, than any mixture which has a fixed alkali in it because the latter is known to adhere to, or diffolve in oil, and thereby impair its qualities as oil; as, on trial, the manufacturers found the oil edulcorated with tled and cooled, gen fuch mixture.

It may be faid, that washing oil with water is no new invention grant it : but the frequent and ftrong shaking of the oil and water together is new, and indeed effect tual, as every person may inform himself, by making the experiment on fome oil and water in little of the liquor in fome wishind

On this principle, na thought, which may be of ale, occurred to an ingenious septleman, molt deld fervedly offeemed in the learned world; who has the peculiar calest of inflantly trueing every valuable purpose to which any niefal experius ment may benapplied of Heresm whether it fill preferves sunt benol

When the blubber is boiled, formes which it remains till the water and other animal juices, probably of the gelatinous kind, are fo intimarely united with the oil, that they remain an uniform substance, a Ast latinous substance, which mixes dif- every other animal juice is more hoolely with either the pil or the liable to corruption than pure oil water. If the oil and water are put and as the other juices had coninto a glass vessel, this substance will tracted some degree of potresaction appear white, and distinct from in the blubber, there still remaine dinominant of as voscillo in them a tendency to putrefaction, it Pure oil is found to remain longer which is easily excited, especially by any degree of warmth, fo as to give 13 than any other animal substance. the oil the vicious quality. The The putrid fmell may, therefore, be gentleman proposed, that, to preapposed to proceed from some other vent this, the oil, as foon as feed tled, fo as to become clear after boiling, be washed as above with water, which will then more readily and that water cannot alter the na- unite itfelf with every other fub-

ftance

flance mixed with the oil, fo as to carry them off entirely. Whether any degree of warmth will add to the efficacy of the water, experiment must determine. If any difagreeable smell still remains in the oil, it might probably be intirely carried off, if the oil was ventilated with Dr. Haler's ventilator for fweetning flinking water; and if any particles of water remained in the oil, the ventilation would probably carry them off. The oil thus washed will, it may be presumed, keep long fweet, and longer fit for manufacturers and burning.

Method of making fish-glue. Extraded from Jome letters relative to the islands of Cape Breton and St. John's, quritten fince the commencement of the present war.

THERE have been inflances of a glue made of requiens +; and it is presumed it might be extracted from all forts of rough-shinned fish, as well as from porpoife, fcuttlefish, sea-monsters, and other fish without scales. As the method of preparing it is very little known, I mall make you acquainted with it; and this I can affirm, that if ever you come to use it here, you will find it will answer your expectation. And, indeed, if they were to apply themselves hard to make this kind of glue, France might foon difpense with that which at prefent the is obliged to import from Holland and the Levant. Though the subject at first fight feems to be but of small importance, yet it will appear in a different light to those, who know of what confequence it is to a kingdom not to be obliged for necef-Proof and which of being a conference of the being to die proof

They take the skins of the above. mentioned fishes, with their for tails, heads, cartilages, in short, the whole body of the fish, except the flesh and the fat or oil. All these they boil in water, taking care to preferve it from the smoke, or from any thing that might discolour the liquor. When it is boiled down, and the water has extracted all the substance of the fifty parts, they let it stand to grow cool, and then frain the liquor either through a fieve or a piece of linen. Then they boil this liquor over again with the same precaution, till the drops that fall grow hard and confiltent as they cool. When they can judge from thence that the glue is made, they let it cool a little; but not fo as to hinder it from running on the tables of stone or flate upon which they pour it. For want of such conveniency, feveral other things may be contrived to receive it, taking care however to put paper over it, and to raile the edges of the paper, because the glue ought to fpread itself, and to rise without fastening to any other substance. As foon as it is become confident, it is twisted round like paste, and stringed, in order to hang up in rows in the shade: and when they are obliged to make it upon paper, it is not taken off; but they either twist the paper along with the glue, or elfe they do not twift it at all.

The glue made in this manner is more or less perfect, according as they take more or less care to clarify it, and make it keep its colour. It intirely diffolves in water, without leaving the least mark behind it.

Processes for making the best and finest fort of Prussian Blue with Quick-Lime.—From the history of the Royal Academy of Sciences at Paris for the year 1756.

PROCESS I. TAKE 3 lb. of ox's blood, dried and reduced into a kind of small scales; an equal quantity of quick lime newly baked, 2 lb. of red tartar, and t lb. 8 ox. of faltpetre; pulverise the whole grossly, and put it into a crucible placed in the midst of a great furnace, and give it a gradual fire. After four hours of a good fire, when the matter is reduced into a kind of patte which emits no more smoke, and is equally red, throw it by spoonfulls into two pails of boiling water; and, having filtrated the lixivium, mix it with a folution of 6 lb. of allum, and 1 lb. 8 oz. of green vitriol. This operation will yield but 7 oz. of fecula; but its beauty will make fufficient amends for the fmall quantity, as it will furpals in this respect all the blues of Prussia, which are prepared by other methods. It has also as good an effect as the finest ultramarine; and has, besides, the advantage of resisting the impression of the air.

PROCESS II.

Take 3 lb. of dried ox's blood, an equal quantity of quick lime, 2 lb. of red tartar, and 2 lb. of nitre, all of them calcined and lixiviated as in the foregoing process; pour the lixivium into a folution of 4 lb. of allum and 1 lb. of green vitriol. This operation will yield more of the blue fecula than the other, but the colour will be less beautiful.

PROCESS III.
Take 3 lb. of dried ox's blood,

4lb. 8 oz. of quick lime, 2 lb. of red tartar, 1 lb. 8 oz. of faltpetre. Calcine and lixiviate as in the foregoing operations, and proceed in the fame manner. This is the operation that will be productive of the most beautiful blue; but it yields only 8 oz. and somewhat upwards of four drams.

PROCESS IV.

Take 3 lb. of dried ox's blood, 6 lb. of quick lime, 2 lb. of red tartar, and 1 lb. 8 oz. of nitre. Calcine and lixiviate as in the foregoing processes; pour the lixivium still warm into a solution of 4 lb. of allum, and 1 lb. of green vitriol: a blue fecula, as beautiful and fine as that of the first process, will be precipitated, but the quantity will be much greater; for this way will yield twenty-six ounces.

On a durable Gold Colour, communicated to Silver by Dew, reduced into the confistence of an extrast.— From the Ephemerides of the Curious.

THE author fays, that chance occasioned this observation. Being busy in making several experiments on dew, which he had kept for half a year in a tub, that it might acquire the state of putrefaction he defired, and having fet a certain quantity of the liquor to evaporate, he took up a filver spoon at hand, to know if it had the neceffary confishence; which finding too fiquid, he poured it back immediately into the veffel; but was greatly furprised, when, casting his eyes on the spoon, he perceived a brilliancy, and a very fine gold colour on the part which had been dipped into the liquor; and which,

when

when the fpoon was cool, could not be got off, by either rabbing it with the hands, or with a linen-cloth. In hopes of fill increasing the intenfeele of the colour, and of making it more durable, he dipped again, during a few minutes, the spoon into the fame hot liquor, of the confishence of a mucilage; and, by this fecond immersion, this gold colour changed into a beautiful purple. Being afterwards willing to try the permanency of the colour, he had the spoon served every day at table, and a whole year paffed before its colour was defaced. This tincture, the author adds, is much preferable to that of Glauber, and other chemists, from sulphureous, antimonial, and vitriolic folutions, hich afford but a weak copper colour, that disappears in a short time.

An account of the method pursued some years ago to entiripate the grubs of Ont-webs, or Cock-chasers, in the county of Norfolk, where these insects eat away the roots of grass and corn to such a degree, as to destroy the produce of large tracks of land. Extrasted from several letters inserted in the Philosophical Transactions for the year 1748.

THESE insects have been more or less about Norwich for twenty years past. They are the crace of the scarabeus vulgaris major of Mr. Ray.

In different parts of England it is called the brown tree beetle, the chafer, the cock-chafer, the jackhorner, the jeffry-cock, the Maybug, and in Norfolk the Dot. by
the Dutch they are named bankasfer, roub-kasfer, koren-warm, or
corn-worm, because they destroy the
roots of corn; and in Zealand,
molenaers or millers, as Goedartin
says, chap. lxxviii. because they
bite the leaves of several sorts of
trees into particles, as small as if
they were ground. In England I
have likewise heard them called
millers; but supposed to be from a
mealy powder, wherewith their
wings are covered. The French
call them banetons.

This infect has two pair of wing, one filmy, and the other fealy; the first pair fold together under the latter; and remain quite hid, unless when spread out for slight. The elytræ, or case-wings, are of a reddish light-brown colour, and seem sprinkled with a white powder that may easily be wiped off; the legs and pointed tail are whitish, the rest of the body brown, except at each joint on the sides of the belly, where there is an indented line of white.

It is probable the females make holes in the ground with their sharp tails, and there deposit their young: but whether at first they are small eruce, or eggs from which such eruce are hatched, I cannot say: it is certain these eruce are extremely mischievous, by devouring the roots of almost every thing where they come, and in some grounds they are sound in such numbers as are scarcely credible.

"I have feen, fays Mr. Arderon, whole closes of fine flourishing grass, in fummer-time, become withered, dry, and as brittle as hay in a few weeks, by this vermin's eating of the roots"; so that many

led up in one piece. When one of them fixes upon a ip, he eats only the middle il root, which foon causes it to her and die, and then moves on the next. In like manner they toy the roots of wheat, rye, &c. almost every other useful vegete in their way. What makes pell the more deplorable, is the g time of their continuance in ruce, or most mischievous which, according to Goedars, is four years at leaft: but offet writes, that in Normandy are observed to be most numesevery third year, which is refore called Pan des banetons. dit is not improbable that, in open fields, where they are well , they may come to their perfect ea year fooner than those did ich Goedartius almost starved in fs jars.

Mr. Arderon fays, neither the ereft frofts of our climate, nor being immerged in water, will toy the eruce; fome having en exposed for many days to the eneft frosts, and others covered h water for as long a time, th notwithstanding were found revive, and become vigorous

Crows and hogs devour them tedily; but their numbers are great to be diminished thereby. e most effectual way, though y laborious, is to beat the chaoff the trees in the day-time th long poles, and then fweep em together and burn them. On arm at Heathal, five miles S. W. Morwich, of 801. per ann. longing to St. Helen's hospital in at city, in the occupation of fartrEbden, they were fo numerous VOL. V.

of this withered turf might be last year, that he and his fervants affirmed they gathered eighty bushels of them, the erucæ of which had fo spoiled the produce of his farm, that that city, in compassion of his misfortune, allowed him 25 l.

> The following is a copy of the farmer's letter.

> "The destructive calamity which, for near 20 years, has attended us in divers parts of this county, by the cankers, occasions my fending this, with a view of doing good to the public, as I have been a great fufferer by these vermin, and endeavoured many ways to destroy. them, which proved ineffectual.

> Some people have fed themselves with hopes that exceffive wet weather will deftroy them; others, that a fevere winter will do it; but they are greatly mistaken: I once in digging a piece of firm ground found fome of them at least fix feet deep: I have thrown foot on my land, and used many ways to deftroy them in the ground, but to no purpose.

> The only expedient I ever found out, is, when they become flies, and are on the trees, which are mostly oaks, elms, and maples, to make packsheers or tilters to throw them upon, and by destroying them in this manner, when in the fly, you prevent their doing further mischief by lodging in the ground,

These cankers become flies every fourth year. In 1736 I prepared packsheets, and gathered into them at least feventy bushels from the trees in my own premiles; four years after I had not 40s. damage done; but my neighbours, not gathering them as I did, foffered greatly. In 1740, when they were flies again, I was more industrious,

H and

and gathered eighty bushels. In 1744 I was indisposed at the time of flying, and gathered none; for want of which I suffered above spreading further. sool. damage the fecond year after they flew, by their getting into my

ground.

I advise all armers, &c. perplexed with these vermin, to observe that this is the time [June] of their flight, being their fourth year, and forthwith to gather them in the manner abovefaid, by which they may not only in a great measure prevent any future mischief from those insects, but also in time totally destroy them.

JAMES EBDEN."

In the day-time few of the beetles fly about, but conceal themselves under the leaves of oaks, fycamores, limes, &c. and may be shaken off: here they feem afleep till near funlet, when they take wing and fly about the hedges, as thick as fwarms of bees; at which time they frequently dash themselves against peoples faces with great violence, and occasioned the proverb, As blind as a beetie.

It is recorded, that on Feb. 27, 1574,, there fell fuch a multitude of these insects into the river Severn, that they stopped and clogged the wheels of the water-mills: their coming fo early in the year was no less extraordinary than their multitudes; for the larger species seldom appear till the month of May; and a smaller fort, which come out in July and August, are feldom feen after the evenings grow cold.

We are told, in the Transactions of the Dublin Society, that the country people in one part of that kingdom suffered so greatly by the devallation made by these insects, that they fet fire to a wood for miles in length, which parted tw adjacent counties, to prevent the

In a letter wrote to Feijoo, he is squainted that the life of a blind therman was faved, after he had seen drowned an hour and an half, y following the directions given bove. He himfelf likewife re-

lated the recovery of a girl in the city of Estella, after she had been drowned an hour, through the charitable affistance of a gentleman who efteemed his works, and had the above-mentioned directions present in his mind. But he added this circumstance thereto, which was, that, befides the application to the fire, and inverse suspension of the body, he introduced air therein through the aspera arteria. This addition Feijoo does not entirely condemn, but would have it put in practice only when the other methods do not meet with timely fuccess, taking then great care that the introduced air passes through the aspera arteria in order to proceed to the lungs; and that it does not enter the afophagus, which would be very prejudicial, the miflake being eafy, as the orifices of the two canals are very near.

The following recovery of a man suffecated by the exhalations of lighted coal in a mine, is a strong argument in favour of what has been faid above. His eyes were fixed, his mouth open, his body cold, and every way motionless, and was concluded to be quite dead. A furgeon imagining that by this extraordinary method he might reflore him to life, applied his mouth to that of the supposed dead body, and stopping the nostrils of it, blew with fuch strength that he filled his breast; and continuing this method, perceived fix or feven strong beatings of the heart. The cheft recovered its elasticity, and the pulse became fensible. A vein being thereupon opened, the blood at first ran drop by drop; but in a quarter of an hour very freely: the patient's body was then well rubbed; he recovered his fenses an hour at-

H 2 terwards,

terwards, and returned home in perfect health.

The possibilitity and even easiness of recovering persons in the above circumstances, is further confirmed by the following recent instance extracted from the Memoirs of the Royal Academy of Sciences at

A Young fellow about one and twenty, a waterman at Passy in France, fell into the river about ten o'clock in the morning of the 24th of July 1757; as he was then near the shore, he received a blow upon his head in the fall, which stunned him, and the tide immediately carried him into the middle of the stream, where he was stopped by a great stone in about seven or eight feet water. The people that faw the accident immediately called out for help; but it was half an hour before he was taken out, being dragged to shore with a boat hook without the least figns of life; he was carried into a neighbouring house and supposed to be dead; but a physician happening to come by, blew up a great quantity of tobacco smoke by the anus, with a firaw, and blew also the same smoke plentifully into his mouth and nostrils; the man very foon gave figns of life, very flight indeed, but fufficient to encourage the good Samaritan to proceed; he caused a vein to be opened both in his arm and his foot, and in order to restore the vital heat, wrapped him in the fkin of a fleep that was flead upon the

ne compiled

ANDRES IN W.

fpot for that purpose: in a flore time the patient recovered fo far as to be able to fpeak; and the marquis of Courtivron, who has attested this fact, faw him fix days afterwards in perfect health, though a little weak from the loss of blood,

Inflances of drowned persons recovered are by no means fo rare a is generally imagined; and they would be much more common proper methods were used for the purpose. The French academy, by whom this fact is related, observe that many persons have recovered who have lain many hours in the water; and that as persons in merged in water die only becan the circulation is stopped, the bloo being prevented from returning from the right to the left ventrick of the heart, by the water's having flopped the refpiration, nothing more is necessary to recover fuc persons, than to put the heart again into motion, and gradually an equally to warm the body in ever part. To put the heart in motion it is adviseable to force irritating and spirituous remedies up the ma firils, and to blow with some degree of force, the smoke of tobacco int the lungs by the mouth, and int the abdomen by the anus; the bod may be equally and gradual warmed by rubbing it with war flannels, and placing it in a warm be and changing the coverings as ofte as they grow cold, for others take from the fire, and by many oth expedients of the like kind, which will naturally occur in differen places and fituations.

were they farmily found to be NA STATE OF THE PROPERTY AND

ANTIQUITIES.

AT a time that so many voyages are made to the remotest parts of the globe to gratify the cravings of warice, or ambition, and so few, ven to places near home, from any landable views of extending the bunds of virtue and learning, it is m small satisfaction to us to be able present our readers with the folwing relation of a woyage underthen upon very different principles. tis impossible not to be struck with be importance of many of the discowith the courage, patience, and caacity of the discoverer, who, in so hall a period, and in such circumfances, could learn so many lanrages, utterly unconnected with those ready known in Europe, and copy nd translate so many books written them. No character can be more speciable than that of a true virofo, who braves every danger and ificulty in order to promote useful wledge, and to increase the mateials of speculation in the learned weld. It is true, that many things mained in the books already brought ver by Mr. Perron, appear, at first new, little better than a heap of Il tales, calculated to amuse a barrous people; but there are mixed with those visionary ideas, objects my deserving of attention; and even ings trivial in themselves become unthy of regard, when they tend to Afrate the manners of so considerthe a people as the ancient Persians, when they furnish something tosards the history of the human mind general.

A brief account of a woyage to India, undertaken by M. Anquetil du Perron, to discover and translate the works attributed to Zoroaster. Translated from the original, drawn up by M. Perron bimfelf, and read last May before the Royal Academy of Sciences at Paris.

THE religion and history of the Parsses are very interesting objects of themselves, but they merit the attention of the learned still more by the connection which this people have had with the Hebrews, the Greeks, the Indians, and perhaps with the Chinese; but if we content ourselves with what the ancients have told us of them, our knowledge will be very superficial; for a few passages scattered here and there in their writings, most of them manifestly dictated by prejudice, can convey but a very imperfect idea of their history and manners.

These reflections engaged the learned Dr. Hyde, about the end of the last century, to attempt a deeper investigation of a subject, which, till then, had been but flightly touched: he therefore applied himself, with great diligence, to read the works of Arabian and Persian writers, from which, and from the relations of travellers, and a great number of letters, which he received from persons who were settled in India, he compiled his celebrated work on the religion of

This work, which abounds with Oriental learning, may be confi-

dered as the only one that contains any thing curious and particular concerning the Parsses, though the principal fources which Hyde exhausted are not of the first antiquity: he cites in particular the Pharbangh Djehanguir, a celebrated dictionary, which, he fays, had been digested about 200 years before his time by Ebn Fakhruddin Angjou, a Mahometan: he also cites many passages from Virafnama and Sadder, works posterior to Zoroaster, of which he had feen only translations in modern Perfic. He was, however, possessed of wo works in Zend , the Jzeschne and the Neaeschs, and it was reasonable to expect that he would have translated these rather than Sadder, or at least if he understood Zend, he ought to have supported what he has advanced contrary to opinions generally received by the authority of these original pieces.

The Parsses have been little known, except by these inquiries of Dr. Hyde; and, as he has contented himself with the mere mention of the Zendavesta, a general name for the works attributed to Zoroaster, without translating it, his work must be considered as nothing more than an essay. The best way would certainly have been to have confulted the Parsses themselves, concerning their own religion, which was by no means impracticable; a very numerous body of them has been established more than 900 years in Guzarate, to which place they came fugitives from Kirman, A. D. 767, on account of the Mahometan perfecutions; and where the genius for commerce and industry, which is their known characteristic, has procured them very considerable settlements. They are called in India, Parss, or Parsses, and by the name Parsses, I shall henceforward distinguish the remains of Zoroaster's disciples.

years

Two English gentlemen brough fome Perfic manuscripts into Eq. rope, which have never been print ed; and these were the only at tempts which have been lately made to acquire and understand the works attributed to Zoroaster; the rest of Europe have been content to re implicitly in what has been done by Dr. Hyde, without once conceiving a defign to learn languages, which the learned themselves scaro know the names. This genera negligence, with respect to so in teresting a subject, I always confi dered with wonder and regret; and at length, refolved upon a voyage

to India myself. In 1754, I happened to fee fragment of the Vendidad Sade which had been fent from England to M. Fourmont, and I immedi ately resolved to enrich my coun try with that fingular work. formed a defign of translating i and of going with that view to lear the ancient Perfic in Guzarate of Kirman; an undertaking which would necessarily enlarge the idea I had already conceived, concern ing the origin of languages, and th feveral changes to which they ar fubject, and probably throw a ligh upon Oriental antiquity, which wa unknown to the Greeks and Ro mans,

* Zend is generally used to signify the language in which the works after buted to Zoroaster are written; though strictly it means only the characters that language.

I determined also, to obtain a knowledge of the religion of the Parsses, from the Parsses themselves, and knowing that the four Vedes; facred books of the Indians, were written in the ancient Samskretam, a dead language, supposed to be the common stock of which all the the Indian languages are branches; and that there were books in the king's library which nobody underfood, I was led to prefer It dia to Kirman, as I might there learn the ancient Persian, and the ancient samskretam together.

When I got to Port l'Orient, I heard that the king had granted me a pension, and I embarked for the East Indies, on the 24th of February 1755, with a resolution of bringing back the laws of Zoroa-

fer and the Bramins.

I arrived at Pondicherry on the 10th of August in the same year.

The coast of Malabar is a mufeum of natural curiofities. Gattes, a chain of mountains which divides the peninfula of India into two parts from north to fouth, are on this coast but a little way from the lea, and afford a fine field for botanical enquiries. The Indian customs continue here in their original fimplicity, the country having always been subject to princes attached to the ancient religion; the Tamoula, or Malabarian language, approaches nearer to the Samikretam than that of the coast of Coromandel.

After visiting the Christians of St. Thomas I went to Cochin, where lobtained an exact copy of an infeription in the ancient Samskretam, on two copper plates, being a confimation of several privileges granted to the Jews at Cochin about 1200 years ago, by Charan Perumal, em-

peror of the Malabar coaft, a tranflation of it in Rabbinical Hebrew, and a copy of a map of the environs of Cochin, with the names of the places in the characters peculiar to the Rabbins. I likewife obtained a copy in modern Samfkretam, and a French trancation of fome privileges granted by the fame emperor to the Christians of St. Thomas. There is a Samskretam of different ages, and I was defirous of having examples of it thro' all its variations, that I might fix the language in which all the books which are held facred in that part of Asia, which reaches from Persia to China, are written.

On the 14th of February, 1758, I set out from Mahe for Goa, in. order to proceed to Surat; and in all my routs I took care to keep specimens of the money of all the states I passed through, so that I have examples of every coin that is current from the Cape Comorin to Dehli: I passed the Gattes the 27th of March the same year, about ten in the morning; and, when I entered the country of the Maratas, I thought myself in the midst of the fimplicity and happiness of the golden age, where nature was yet unchanged, and vice and mifery were unknown. The people were chearful, vigorous, and in high health, and unbounded hospitality was an universal virtue; every door was open, and friends, neighbours, and, ftrangers, were alike welcome to whatever they found.

When I came within about feven leagues of Aurengabad, I went to fee the celebrated pagodas of Iloura: these temples are hollowed in the living rock, and contain in basse relief all the Indian mythology: but I did not find in them

II 4 either

either the ancient inferiptions, or the schools of the bramins, which the accounts of travellers had given

me reason to expect.

was in my journey from this place extremely enfeebled by a dyfentery, and was just finking under It when I discovered the walls of Surat, where I arrived on the 28th of April, 1758. This city has been the center of my studies, and I shall give a brief account of the particufar objects that detained me there

three years.

I shall first indulge myself in a few words concerning the hierarchy of the Parsies. I shall often have occasion to mention the Destours and the Mobeds, and it is therefore necessary to explain the terms. The ministers of the religion of the Parfies are divided into five classes: Erbeds, Mobeds, Deftours, Deftour Mobeds, and Deftoran Deftours, or Deftours of Deftours. An Erbed is he who has submitted to the purification directed by the law, who has read, during four days without Interval, the Treschne, and the Vendidad, and who is instructed in the eeremonies of the worship established by Zoroaster. If the Erbed, after this kind of ordination, conrinues to read publickly the Zend works, which conflitute the liturgy, and to perform the ministerial functions, he becomes a Mobed, though he does not understand the Zendaouffu; but if he contents himself with fludying the law, the Zend, and the Pehlvi, without exercifing the aninisterial functions, he is called a Deftour. The Deftour Mobed is be who unites the qualifications of the Mobed and Destour; and the Destouran Destour is the principal Destour of a city or a province; he decides tales of conscience, and definished,

termines points of law, and the Parsses pay him a tythe of their n.

When I arrived at Surat, I found the Parffes divided into two feds, which opposed each other with the most furious zeal; one of these fects was called the Ancient Be. lievers, the other the Reforment and the schism commenced on the

following occasion:

About five and thirty years ago, there came from Kirman, a Deflour Mobed of great abilities, whose name was Djamasp, and who was fent to compose some differences that had arisen among the Parsies concerning the penom, a piece of linen about nine inches square, which the Parsses, at certain times, placed upon the middle of their nose, so that it hung down and covered their mouth: some contended that this linen should be placed upon the nofes of dying persons, and others that it should not. Djamasp decided the dispute in favour of those who maintained that the linen should not be applied to the dying, fuch application not being customary at Kirman. If this Destour had not put an end to this ridiculous dispute, it would have drenched the country in blood; but he did not stop here: he examined the copy of the Vendidad that was in use among the Parises of Guzarate, and he found the Pehlvic translation too long, and, in many places, very corrupt: he found the people in general also grosly ignorant ; and, to remedy these inconveniencies, he established proper persons, his disciples, at Surat, Nangary, and Parotche, to whom he had taught the Zend and the Pehlvi; but being at length wearied with the perverse and vexatious opposition

position that was fomented against him, he returned to Kirman.

The books which he left in India were an exact copy of the Vendidad, both in Zend and Pehlvi; the Feroueschi in Zend, the Vadiergurd and the Nerenguestan. The two last are purely ceremonial, and in a mixed language of Zend and Persic.

Darab, the disciple whom Djamasp had left at Surat, and who was a consummate master of the Zend, the Pehlvi, and the Persic, set himself to correct the Pehlvic translation of the Vendidad, and the corrupt parts of the Zend text; and began to explain to the young Parsic divines the writings of Zoroaster, which the Mobeds read every day without understanding them.

It is easy to conceive that an abjest people, who, for more than eight centuries, had practifed a thousand ceremonies, of which they knew neither the origin nor the meaning, would be the dupes of innumerable impositions; and Darab soon discovered that this had been the case; that ceremonial purifications had been multiplied almost without number, and the Zend text almost buried under frivolous Pehlvic commentaries: thefe abules he made an attempt to corsett, by exposing the absurdity of them; but he found a very formidable adverfary in Macherdii, the chief of the Ancient Believers, and the fon of a Destour; and this breach between them was made still wider by a dispute concerning the ist day of the year, which Kaous, relation of Darab's, well verfed in the astronomy of Ulughbeigh, infilled was advanced a whole Penlys; but being at length . Attoo

l took advantage of these broils

to obtain the books I still wanted from both parties, and from Darab instructions in the Zend and Pehlvic languages, and affiftance in translating the Vendidad into modern Perfian, so that no difficulties now remained but those that were effential to the kind of study which I had commenced, and the inconveniencies inseparable from a fiege, the English being at this time carrying on an attack against the fortress of Surat. My close application to fludy frequently impaired my health; but, at length, I compleated a translation of the works attributed to Zoroaster, and some other manuscripts to which they have relation. The modern Perfic served me as an intermediate language, because Darab, for fear of being understood by the domestics, would not disclose the mysteries of his religion in the vulgar language. I also took the trouble of writing the Zend and the Pehlvi in European characters, and by a frequent comparison of what Darab told me at one time, with what he told me on the same subject at another, I affured myself I was not imposed upon. By these means, after a fickness of three months, I was able to renew my studies, and was fortified against the fear of forgetting them, which procured me a tranquility of mind that haftened my cure.

After having enabled myself to form a just and exact idea of the religion of the Parsses, and been present in their temples, which they call derimers, at their worshipping of fire, I was desirous to compleat the second part of my plan; having proposed, when I quitted France, to make myself master of the religious institutions of all Asia.

The article of the Parsses was finished,

finished, and though I was much weakened by continual labour, yet I felt myself still in a condition to attempt the Samikretam. I therefore endeavoured to procure the four Vedes at Surat, at Brampour, and at Amadabad; these works, as the Bramins suppose, were composed by Kreschnou, 4000 years ago; they are called the Samveda, the Ridjouveda, the Atbarnaveda, and the Ragbouveda; the Samveda is the

most scarce of all.

I took care as foon as I arrived in India, to settle a correspondence in a great variety of places, particularly at Ceylon and Cochin with the Dutch; and at Bombay and Tatta upon the Linde, with the English : and, Mr. Spencer, commillary of the marine at Bombay, had the politeness to send to Dehli, to a wakil, or agent of the company, an account of the books which I wanted; particularly recommending a perfect translation of the four Vedes, made about 200 years ago, by Abulfazel, minister of Akbar

While my friends were thus bufied in my behalf, I caused copies to be made of the three Samikretam dictionaries, which were held in the highest estimation in India: two of them are dictionaries of the Bramins, called Amerkofch, and Viakkeren, and the third is a dictionary of the Sciouras, called Nammala. These copies were no sooner finished, than, to avoid the fury of the black troops, I found myself under a necessity of quitting Surat: I therefore took this opportunity to viat the famous pagodas of Kennery and Elephantia. Those of Elephantia are most known, because they are in an island not far from Anely estaped are the wedmon

In my way I vifited Soualy, Sadjam, Daman, and Naucary, the principal fettlements of the Parses, where the fire is kept up called Bebram, for which they have a peculiar veneration. I conversed with the principal Destours at all these places, and had the fatisfaction to find that they all honoured the parts and learning of, Darab, tho' they did not equally approve of his conduct, which they thought rather

I

fleady than prudent.

On the 28th of November, 1760, I arrived at the island of Salfette. and immediately furnished myself with provisions for ten days, the time I intended to pass in the pagodas of Kennery, which are fituated in the middle of the island. These pagodas, like those of Iloura, are great temples, hollowed out of the rock; the walls are without plaister, and at present very much out of repair. I was obliged to fet fire to some bushes that stopped up the entrance; and having with fome difficulty got in, I examined the whole place with great attention, nor did the most obscure caverns escape me. I found at Kennery twenty inscriptions, cut upon stone, in ancient characters, with which the most learned Bramins were utterly unacquainted; one in modern Samskretam, and another still later, in characters fomething refembling those which Hyde, p. 551, plate 15. of his book, on the religion of the Parsses, says, he believes to have been used among the Mogul Tartars, who possessed themselves of China. If it had not been for the misfortunes of the French in this part of the world, I should not have thought of gratifying my curiofity in these dreary caverns so soon: it is well, however, that it was not delayed;

delayed; for part of these inscriptions was already obliterated by time, and the rest is on the point of being so. Of all that I found I made copies with the utmost exactness; and the ten days, which I had allotted to this undertaking, being expired, I proceeded to the pagodas of Elephantia, which are in the island of Galipoury, and are also hollowed out of the living rock.

s not

ayed;

In these pagodas, I found no inscriptions; I therefore took their proportions, and the dimensions of the columns and the bases, as I had done at Iloura and Kennery, and set

out on my return to Surat.

My health was extremely injured, yet I made shift to get to the foot of the Gattes, in quest of the seeds and offsets of Thec and Champa. This effort quite exhausted me, and, besides, threw me into a fever so violent, that, after a journey of eight days, I was brought into Surat in a state of the most deplorable insensibility.

The journey to Benares was now given over, and I was confined to my bed by a complication of diforders, when news was brought me of the loss of all our settle-

ments.

I had specimens of the Samskretam of the highest antiquity in the inscriptions of Kennery, and in the sinstruction of Kennery, and in the sinstruction of Kennery, and in the sinstruction of the works; of about 1200 years old, in the grant of privileges to the Jews of Cochin; and of 300 years old in translations of some of the works of Zoroaster. Among my manuscripts, I had also the three most celebrated Samskretam dictionaries, a very good dictionary, French and Malabarian, duplicates of the works of Zoroaster, and of a part of the Pehlvic translation;

feven modern Perfic dictionaries, many other Perfic, Indian, and Arabian manuscripts, and a general map of the Peninsula of India, made at Malabar by the Bramins. The danger to which my little library was continually exposed, and the bad state of my health, determined me to return to Europe, deferring the translation of the Vedes, and the explanation of the antiquities of India, to some more fa-

vourable opportunity.

I have only a few words to add concerning the works of Zoroafter, and the languages in which they were written, and into which they have been translated. By the works of Zoroaster, I mean those Zend writings, which the Parsses attribute to their legislator, and for which they have the same veneration which the Jews have for their Hebrew I do not pretend to affirm, text. that they are really the works of Zoroaster; but I would have every one judge for himself, when he sees this opinion of the Parsses, supported by an unbroken tradition from Zoroaster to Jezdedjerd, and adopted by the Mahometans their declared enemies.

The law, which was either framed or regulated by Zoroaster, was divided, as we are told by the modern authors, into one and twenty nosks, or parts. Seven treat of the creation and history of the world, seven of morality, and civil and religious duties, and seven of physic and astronomy.

It is a tradition univerfally received among the Parsses, that Alexander the Great condemned these one and twenty volumes to the slames, after having caused them to be translated into Greek. Those which escaped are the Vendidad, the Jze/chus, the Vispered, the Jeschts, and the Neaescht, in Zend; some Pehlvic translations of Zend originals, which are not extant, as the Boundakesch, and the Bahman Jescht, and the Pehlvic translation of the Zend originals, which escaped the flames, except one part of the Jeschts.

The Parties have also a great aumber of prayers, which they call Nerges: and which, in general, are written in modern Persic, with Zand characters, which they affect to use in all writings that treat of religion, though composed in mo-

dern Perfic.

The manuscripts Zend, Pehlvic, and Persic, which I have mentioned above, are those which I have brought with me, and have translated and deposited in the king's library; some of them are also translated into Samistretam, and modern Indian, with an interlineary Persic version, which will greatly facilitate the study of those languages to persons who have already made the Zendovesta familiar.

As all these works pass in the

country whence they came for originals, and are very respectable monuments of antiquity, I have taken the pains to collate two or three copies with each other, and have carefully marked the variations. I have also done the same hing with respect to the little Perfic pieces, which speak of Zoroaster; and of the Barzeumama, a poem, of one hundred and twenty thousand veries; which contains a part of the history of Roustoun, Storab his fon, and Barzour, the fon of Sforab: the copy which I have of that work was made from the only copy which exists in India.

The writings of Zoroaster, which

still remain, speak of the creation of the universe, of the terrestrial paradife, of the dispersion of man. kind, and the cause of the respect paid by the Parsses to fire, which ther call Athro Eboremesdaopothre, son of God. They contain also an account of the origin of evil, moral and natural; eulogiums on all the angels that were appointed to the government of the universe; many hiftorical facts, which are more fully related in other works, written in modern Perfic: they also frequently mention Djemchid, Zohak, Fendoun, Guerschassp, and some other kings of the first dynasty; and exhibit chronologies of the kings of Iran, and the Pahlevans, or heroes of Shiffan and Zaboulestan: lastly, they contain predictions, with respect to the latter times; feveral particulars relating to the end of the world, and the refurrection; fome excellent moral precepts, and a very extensive ceremonial code.

Great lights may be derived from these works by men of true genius and learning, who are well skilled in the ancient languages, by comparing them with other manuscripts which may probably be still found in Kirman; and very important discoveries may be made concerning the origin of mankind, and the histories of those ages which were near

the general deluge.

As to the sile of Zoroaster, it appears to me to resemble that of the ancient sages of the East. We find in his writings frequent repetitions, little connection, and an authoritative tone, which characterizes divinity or enthusiasm. The name of God in Zend is, Meniostepeneste; and in Pehlvi, Madonnad spanni, words which signify a being absorbed in excellence.

The text of the one and twenty noks of the Parssen Jegislator, is called Avefta, that is, the world : it is a dead language, totally different both from the Pehlvi and the Perfic: but the most learned Destours could never give me any fatisfactory account of its origin. Being thoroughly perfuaded of the divine mission of Zoroaster, they suppose, that he received the books of his law from God himfelf, after having paffed ten years at the foot of his throne; but if I might be permitted to hazard my own conjectures, I would fay, that, in my opinion, he composed his works in some mountain, where he concealed himself with fome able priefts, affociated with him in the fame defign. The hardnels of the language called Avefta, faits well with mountaineers, whom nature has cut off from the fociety of other men; fo the subjects of the Jessings, and the Jessomsings, Rajas of the mountains which separate Persia from Indostan, speak an Indian language, much more hard than that of the inhabitants of the plains.

The

Zend is the name of the characters of the Avesta, though it is generally put for the language itself, in which the works of Zoroaster were written, as I have before remarked: the character is neat, and has an air of antiquity, that is discovered at the first view: the first languages, and their alphabets, resemble each other by their simplicity, of which, whoever glances his eye over the Zend and Samskretam characters, will be convinced in a moment.

The Pehlvi was, I believe, the

true language of the Parsses, tho' it is now a dead language, existing only in the translations of the works of Zoroaster, which have survived the ravages of time.

The Parsses maintain, that the Pehlvi owes its original to Kasomors, the first king of their first dynasty: the characters, which were originally well marked, and refembled those which they call Zends, have lost their first neatness in the polishing they have received fince, while the scrupulous veneration which has been always paid to the Avesta, has preserved their Zend letters in their first purity.

The Pahzend is a language almost extinct, a few words of it only being preserved in the Pehlvic translations. As my subject is altogether new, and the language foreign, it may not perhaps be amils, to fay a few words on the difference between the Avesta, the Pehlvi, and the Pahzend languages.

The Aveita, as I have already observed, is that of the works of Zoroaker, and, before the time of that legislator, was intirely unknown to the Parsses; and I am of opinion that it was brought by him from the mountains.

The Pehlvi is the language which was spoken by the Parsses in the time of Zoroaster. The translations which are now extant in that language, are supposed to have been made during his life, or at least soon after his death.

The Pahzend is a dialect or a corruption of the Avesta. Zoroa-ster lest this third idiom to his Destours, and recommended the use of it to distinguish them from the peo-

The Avefta is to the Pehlvic translation, what the Hebrey text is to the Septuagint translation of it.

ple : it is to the Avesta, nearly what the Syriac is to the Hebrew; two examples will ferve to shew the difference of the two languages, Mreod in Avesta, signifies be bas faid, and in Panzend, it is Meri: the name Ormusch is Pahzend, and it comes from the Avesta Eboremefliar alphabet, but adopts that of the Zend and the Pehlvi indifferently.

The bounds of a relation fo fuceinct and compendious, will not permit me to be more particular; but, befides the objects of interested curiouty which the works of Zoroafter may contain, the knowledge of the Avesta and Pehlvi languages, will, without doubt, appear to be of some utility, from the relation which they bear to those language which we know. The stile of these languages, which are of sufficient antiquity, may perhaps lead us to the senie of many passages of the sacred writings of the same date; and Europe will be able to judge, whether the works which the Parsies attribute to Zoroafter, are sufficient to fecure to him a continuance of that reputation, which he has ac-quired by laws that have subfitted 2500 years. .

The following is Mr. Perron's account of the MSS attributed to Zoroafter, and of the other works relating to the religion of the Parffes, which be has deposited in the king of France's library.

was for sireue of any words white

Do not pretend that any of these not accompanied with the Pehl-MSS are originals, written by Zoroaster himself, but only copies of different degrees of antiquity, written, like most other MSS, upon paper made of linen or cotton,

covered with a varnish, on which the flightest stroke is visible.

These MSS may be divided into three classes: 1st, Zend works, of which Zoroaster is supposed to have been the author, and which contain what may be called the breviary and ritual of the Parsses; these are preferved with the greatest care, and are recited publickly by the priefts at certain times prescribed by the law, and also by the private Parsses as a meritorious act, though they do not understand one word of what they atter. The 2d class contains Pehlvic works, fome of which are translations of originals, attributed to Zoroaster: and, the third class confifts of Indian and Perfic verfions of Zend originals, and some MSS written fince the time of Zoroafter, which ferve as commentaries upon the Zend text.

The works of Zoroaster are all written in a wild unconnected manner, but the reader will not wonder at this, when he recollects the genius of Eastern writers, and confiders Zoroaster, not as a philosopher writing in the quiet of filent recollection, but as a legislator who believed himself to be inspired. Of these works, the following is a sum-

mary. I. Vendidad Sade, a folio of 560 pages. The word Vendidad, literally translated, fignifies, Separated from the devil, i. e. contrary to the maxims of the devil, or the object of his hatred: Sade fignifies, pure and without mixture, and is a name given to those Zend works which are

vic translation.

This volume is called by the general name, Vendidad, tho', besides what is the Vendidad, in a ftrict fenle, it contains two other tracts of Zoroalter, called the Jzeschne, and the Viffpered; because the priest, who reads the Vendidad, is also obliged to read these two other works at the fame time, which are divided into proper leffons for that purpofe.

The Vendidad itself is the twentiethtreatise of Zoroaster, and contains a dialogue between Zoroaster and Ormusd, the deity, who answers several questions which are put to him by Zoroafter. In this book, Ormusd is called the pure being, who recompenses, absorbed in excellence, the creator and the righteous judge of the world, which subsists by his

power.

ter,

The work is divided into XXII chapters, which they call Fargards, and all which conclude with a prayer, which they call Eschem Vobou, pure and excellent: these are the first words of the prayer in the original language, which is thus " He who does good, translated. and all those who are pure, shall go to the manfions of abundance which are prepared for them:" the two first chapters, and the five last, contain a relation of the historical facts upon which the Parsses found their faith; the rest of the work confifts of their morals, polity, and legal ceremonies.

In the first chapter, Ormusd acquaints Zoroaster, that he created fixteen cities, which were equally celebrated for their beauty, and for the wealth of their inhabitants; and that Ahriman, (the devil) his rival, or antagonist, produced all the guilt and mifery that had plagued the world. These cities were called Iranvedj, Gaom, Moerem, Bakhdim, Nessaem, Haroioum, Veekeretem, Orouanm, Kheneantem, Herekhetim, Hetomentem, Raghanm, Tchekhrem, Verenem, Haphtehando, and Rengheiao, each of: which was the capital of an empire of the same name. Iranvedj, (i. e.). the pure Iram, the first and most considerable, was situated on the fide of Aderbedjam; and Haphtehando, (i. e.) the Seven Indies, confifted of feven kingdoms, forming one empire, among which they reckoned Caschmite.

In the fecond chapter, Djemchid, called in Zend Jemo, the fon of Vivenganm, and fourth king of the first dynasty of the Parsses, is taken up into heaven, where he received from the hand of Ormusd, a poignard of gold, with which he cleft the earth, and produced the country called Vermaneschne, and the breed of men and animals. This delightfal country, over which death had no dominion, was at length desolat-ed by winter. The plains and tops of the mountains were covered with a burning fnow, which rendered them totally desolate and barren. Dien chid, faid Ormuld, speaking to Zo roafter, was the first who beheld the Supreme Being face to face, and he produced all these marvellous effects by virtue of my word, which was put into his mouth".

At the end of this chapter, Ormusid relates to Zoroaster the origin of the world: It is I, fays he, who have created all that is; I produced the first light that shines with its own radiance, from which the light of the fun, the moon, and the stars is originally derived; the year was

The poignard of gold given by Ormusd to Djemchid, was no other than the divine word, called in the Persian language Aschter-tez; i. e. a two-edged sword, and it is well known to be represented in scripture by the same emblem.

one uninterrupted day, and there was a winter of forty; and of a firong man were born twins, a male and a female, who united as man and wife: the different species of animals also appeared which inhabit the earth.

The third chapter speaks of works that are agreeable to the earth, or rather to the angel who governs it; as agriculture, breeding cattle, removing out of the way the bodies of the dead, and succouring the poor. "A good husbandman, faid Ormused, is as great in my sight, as he who should produce a thousand men, or recite a thousand Jzech-

The fourth chapter commands, to render to the rich what has been borrowed: It treats also of different fpecies of the crimes called Meherderendir, because they come from Deof the devil, opposed to Meher, the angel who gives fertility to culsivated ground. They commit Meherderoudj, when they break their word, and when they violate contracts; when they refuse to pay couriers their hire, to reward the animals that affift in cultivating the ground, to pay the preceptors of youth, and the labouring peasants, and neglect to water a piece of ground when they have promifed to do it.

The fifth chapter treats of dead bodies, and of the place to which they are to be carried, and the ceremonies to be used on that occasion; of legal purifications, and of women delivered before their time. In this chapter, Ormused extols the purity of the Vendidad, and touches on the three rivers Pherat, Ponti, and Varkass.

The fixth chapter treats of the impurity which death communicates to the earth, the water, and veffels of every kind.

The feventh chapter is a continuation of the fame subject; it treats also more particularly of the impority of women after miscarriages, of the dignity of the medical profesfion, of the merit of him who has cured many fick, promising, that he shall be rewarded with a long and happy life: he is enjoined to try the efficacy of his remedies, first upon those who worship the Dews, which are spirits or genii, created by Ahriman, before he gives them to the Parsses; and, it is declared, that if he neglects this precaution, and his remedies prove fatal, or hurtful to the patient, he is worthy of death. Zoroafter then fixes the fees which the different classes among the Parfies are to give to the physician.

He begins with the Athorne of Priest; and a physician who has cured one of these ministers of the law, must content himself with the prayers which he shall offer for him to the angel Dahman, who is appointed to receive the souls of the saints from the angel Sserosch, and conduct them to heaven.

The subject of the eighth chapter, is the manner of carrying the dead to Dakme, the burying place; the ceremony of the presenting a dog to the dead, to drive away the devil; the prayers which are to be made for the deceased; the guilt which is contracted by those who defile themselves, by approaching or touching a dead body, and the purifications which they must undergo.

The Parsses distinguish fire by different names, drawn from the va-

† It does not appear from the original, whether this forty is days or years.

rious

the culinary fire, the bagnio fire, and the founder's fire: In this chapter, Zoroaster recommends the carrying some of all these fires, and of every other kind, to Dadgah, the place of justice; and assigns the place which contains the facred fire, and that which is to be appropriated to prayer. This chapter also contains the Jeta Abou Verio, which, like the Eschem Vobou, is a prayer that the Parsses have almost continually in their mouths: this prayer takes its name from the three first words:

VOL. V.

"God commands the chiefs of the law to perform pure and holy works. The angel Bahman watches over those who have a pure heart, who do good, and apply themselves to the study of the law; he gives dominion to princes, that they may succour and comfort the poor."

Ormused declares, that to please him it is necessary to be pure in thought, word and deed; and, that it is a sin worthy of death, for a man to seduce the daughter or wise of his neighbour, or to commit pederasty: Separate, says Zoroaster, from your communion, and cut to pieces him, who having sinned refuses to submit to punishment; the tobber, him who torments the innecent, the magician*, and him who resuses to pay his debts.

The ninth chapter relates to the Deficur-Mobed, who gives the Barraschnom, that is, who purifies those who are defiled; it specifies the qualities requisite- to this minister, and treats of the place, the instruments, and the ceremonies proper for these purifications: Zoroaster speaks also, in this chapter, of moral

and natural evil: These evils, says he, owe their origin, and their progress, to the crimes committed by mankind, and the little care they take to purify themselves; and, in consequence of this general proposition, he declares, in the 18th chapter, that fornication and adultery dry up rivers, and render the earth sterile.

The tenth chapter treats of the prayers which drive away devils: these impure spirits preside over the particular crimes and evils to which their names have relation; he that excites men to Khaschm, rage, is called Khaschem; he that raises violent storms of Vad, wind, is called Vato; and so of others.

The eleventh chapter contains a particular account of the methods to be used in purifications; with respect to which, the Honover, or word of god, is of the greatest efficacy.

The twelfth chapter treats of the prayers which the children, or kindred of the dead are obliged to fay, or cause to be said on their account.

The thirteenth speaks of the different dogs whose approach drives away the devil, who prowles about upon the earth after midnight; of the manner in which they are to be fed, and of the crime committed by striking them.

The fourteenth chapter is upon the fame subject. He who has killed a dog, must, in order to expiate his crime, give to the three classes of the Parsses, the priests, the soldiers, and the labourers, the instruments of their professions; if he is not able to be at this expence, he

must

I

By a magician, the Parsses mean one who has commerce directly or indi-

must dig canals to conduct the water of rivers through the neighbouring pastures, and enclose the pastures themselves with a good sence; or, he must marry his daughter, or his sister, to a man of exemplary sanctivy.

The fifteenth chapter speaks of five sins which merit the punishment of hell; the 1st, is railing against, or contradicting a good man, who is instructing or admonishing sinners; the 2d, is making the teeth of a dog, who drives away the devil, drop out, by giving him something to eat burning hot; the 3d, is striking or terrifying a bitch that is with puppy, so as to cause abortion; the 4th and 5th are, to have commerce with a woman during the catamenia, or while she gives suck.

The fixteenth chapter relates to

the purification of women.

The seventeenth prescribes what is to be done to the hair and the nails when they are cut. The party is directed to dig a hole in the ground, about half a foot deep, and place a stone at the bottom of it, and to put the clippings of the hair, and the parings of the nails upon that stone, repeating the prayers directed by the law.

In the eighteenth chapter, Zoroaster warns the Parsses not to believe the Destour who carries the Penom, a piece of linen, which the Parsses place upon their noses when they pray, and who performs the functions of priests without having the Kost, which is the girdle of the Parsses; such Destour, says Zoroaster, is an impostor, who teaches the law of the devil, though he assumes the character of a minister of God.

This chapter relates, that, in the beginning, Ahriman resisted Ormused, and resused to receive his law. Zoroaster then celebrates the cock, who, next to the angel Serosch, is the guardian of the world, and secures mankind against the snares of the devil.

The nineteenth chapter contains an account of the war between Ormustd and Ahriman, and of the defeat of Ahriman by the Honover, or Ormusd declares, word of God. that, at the end of the world, the works of Ahriman will be destroyed by the three prophets Oschederhami, Ofchedermah, and Sfoffiosch, who shall arise from a seed preserved in the fource of the river Kansse, a fmall ffream, which the Pehlvic Cofmogony places in Sfiftam, and which is supposed to water Raghanm, the 12th city, which was in the beginning created by Ormusd.

In this chapter, fomething is also faid of endless duration, of the soul of God, which is always employed with the word, of feveral necessary purifications, particularly one with the urine of an ox, and of some implements which are necessary in reading the Awesta, particularly the Barffe, a bundle of small twigs tied toge-Zother, the bell and the falvers. roafter then expatiates on what shall happen at the returrection; after this great event, the righteous and the wicked will pass over a bridge that separates earth from heaven, under protection of the dog, who was created as the common guar-This chapter condian of cattle. cludes with the names of the devils.

In the twenty-first chapter, Ormust directs Zoroaster to render the worship of prayer and praise to the supreme ox, and to the rain of which the angel Taschter is the dismibuter, who substits under the form of an ox.

The rain is drawn from the riters Pherat and Varkass; and, in conjunction with the sun, "who, like a proud courser, springs from the summit of the mountain Albord," renders the earth fruitful.

The twenty-fecond chapter contains the mission of Zoroaster. muld fends him with the angel Nenoffengul into Irman, which, in Lend, is called Eriemeniae +. "Go, fays he, to Irman, that place which I created pure and splendid, and which the infernal serpent has spoiled and infected, that serpent which s absorbed in guilt, and pregnant with death. Do thou, who haft approached me on the lofty mountain, where I have answered the questions which thou hast propounded to me, tarry to Irman my law. I will give thee a thousand oxen, as fat as the ox of the mountain Sokand, upon which men passed over the Euphrates in the beginning of time: thou shalt possess every good thing in abundance, exterminate devils and magicians, and put an end to the evils which they have produced.

This is the reward which I decree to recompense the holy dispositions of the inhabitants of Irman."

The fecond work contained in the Vendidad Sade, is the Jzechne, which the Parsses in general confider as a compleat treatife. The word Trechne fignifies Bleffing, accompanied with praise, which is the general form of the prayers used by the Parsses. The Neaesch expresses the humility of the person who recites it; the Jescht contains a pompous eulogium of the being to whom it is addressed; the Jescht is offered up with more folemnity; and is thought to be more efficacious; water which is consecrated to certain ceremonies is also called Jeschtee-water, and it is supposed to have a particular virtue which gives it an influence even over the foul. If the prayer includes a petition, it is called an Afergan.

The Jzechne confifts of seventytwo chapters, which are called Ha. Ha is a contraction of Hatam, the second word of the expression Jenjube Hatam, so let it be. A form of words, equivalent to our Amen, with which every chapter of the Jzechne is concluded.

This work is divided into two parts; the first, which contains 27 chapters, relates to the Supreme Being, his word, and his creatures: the other part, which contains 47 chapters, confists of prayers, addressed to Ormus and his angels;

This prince is Djemchid, mentioned above, who is sometimes called the hird king of the first dynasty, because Kaiomorts is not always reckoned one. † Probably Armenia; and the high mountain where Zoroaster pretended to have converted with the Supreme Being, seems to be Caucasus, called in that country Albordj. It is probable, that he composed his works upon this mountain; and the language, called Avesta, might be the ancient Armenian, to which the ignorance and superstition of the Parsses gave a divine origin.

and in these the necessities of mankind are particularly mentioned.

This work is in general more a liturgy than any other, and mention is frequently made in it of the apparatus necessary for the minister of the law, when he reads the Avesta. This minister is called the Djouti, a name fignifying one who reads with rapidity; his affiftant is called the Raffpi, (i. e.) one who prepares the fire: the principal particulars of the

apparatus are thefe :

The Ateschdan, or chafing dish, which contains the facred fire; the Barffom, a bundle of small twigs bound together; the Avan, or bell; the hammer of the bell; the Mabrou, or andirons, which support the chafing dish; the cups, the falvers, ring furrounded with hair, all these are of metal; some pieces of the tree; called Hom, and of a pomgrenate tree little round loaves called Darouns, some milk, some dressed meats, fome common, and fome confecrated water, and fome juice of the Hom. Some pieces of the Hom are piled upon the Avan, which, in figure, fomewhat refembles a chalice, and the juice that exudes they call the water of life; the virtues of this apparatus, and the ceremoples practifed in the use of it, are particularized in the Trechne; but Zoroaster always took care to add, that he who read the Avesta, ought to be pure in thought, word, and deed.

Zoroaster also recommended the Keschi, which are marriages between coufin germans; he bestows great encomiums upon subordination, and declares, that every state or class ought to have a chief; these states are priests, soldiers, labourers, and handicraftsmen. He adds, that the women would do well to place

of their own at their head, fex, comely and fruitful. He often repeats his injunctions to take care of brute animals, and fays a word

or two of the pure Ass.

This animal the Phelvic Cosmogony calls, the three-footed Afs, and places him in the middle of the Euphrates: he has, fays the author of this work, fix eyes, nine mouths, two ears, and a horn of gold; his body is white, he is fed with celestial food, and thousands of men and animals may pass between his legs; it is he who purifies the water of the Euphrates, and waters the feven divisions of the earth; when he makes his voice to be heard, the fishes created by Ormusd conceive and the productions of Ahriman cal their young.

Much is also said in the Jacoba of the Honover, or word of God which is faid to have existed before

all creatures.

Theoth, 10th, and 11th chapter relates wholly to a man called Hom Ised: this celebrated Destour is tepresented as a holy king, with eye of gold very piercing; his dwelling is on the mountain Albordj: it i he who bleffes the waters and the cattle, and who teaches the right way to those who do good; the pa lace in which he refides on moun Albordj, is supported on a hundred columns, his bed and his appare thine with the splendor of holiness he promulgated the law upon the mountains; he brought the Koffi the girdle of the Parsses, and the Sadera, a kind of shirt worn by tha feet, from heaven. His employment upon the mountains is to real the Avesta; he destroyed the two footed ferpent, and created the bin which gathers up the feeds that fa from the tree Hom, and then feat

This Hom bound Afrassiah, king of Touran, to a wall of brass; when Vivenganm prayed for a child, he gave him Djemchid, he gave also Feridoun, the conqueror of Zoak, to Atvian. The hero Guerschassp, who slew the serpent, was the fruit of prayers, which Saman his father iddressed to Hom, and Poroschassp, the father of Zoroaster, owed that illustrious offspring to his protection.

Such is the portrait which the frechne has drawn of Hom: his furname in Zend is Zacreguoe, Zerequone, Zerietche, Zerrin, each of which words fignifies of a golden colour: this property which chaafterizes the tree Hom, that is plantd in the middle of the Euphrates, grees also with the man Hom Ised, the presides over that tree; and the names by which it is above expreffed, have probably given occa-tion to some authors to suppose, that there was another Zoroaster before he legislator; for the name Zoroasm being more recent and familiar, may have been substituted for that of Zereguone, or Zerrin, with which thas as much affinity as with Zeretofebtre, Zertofebt, and Zerdust, which are the Zend and Pelvic names of Zoroaster.

This Hom Ised, or Zereguone, has lest no writings. He was, however, a celebrated sage king of the mountains, and his throne was upon Albordj: Zoroaster, indeed, attributes to him many actions, which have rendered it doubtful at what time he lived. These facts happened, some under Djemchid, some

under Feridoun, and others under Guerchaffp, Kekoffro, and even Gustaffp. By the Zend text however, it appears, that Hom Zereguone gave laws to the people of the mountains in the time of Djemchid, with whom, therefore, he must have been contemporary: the other actions which have been attributed to him, were performed by other princes, who invoked him by virtue of his power delegated to them, and, in that fense, may be faid to be performed by him; and the historian frequently represents Hom, as performing himself the miracles which were wrought by his influence.

The Jzechne also contains the eulogy of the sun, of fire, and of water; of the moon, and the five Gahs; the Gahs are the five days which the Parsses add to the 360 days of the year, because their year consists of 12 months, each of which has 30 days.

The Jzechne concludes with the eulogy of Serosch the angel of the terrestrial world, who watches over it for its preservation, and with a fummary of the law, to this effect. "Read the Honover, which pure and victorious, which shall burn like stubble and dry wood all who are impure in thought, word, or deed; and regard with religious veneration, all that Ormusd has done, all that he does, and all that he shall do." This summary is agreeable to the precept of Ormufd, " Adore all that I have created, for it is the same as if ye adored me." To fulfil this command of the fupreme Being, Zoroafter, in the beginning of the Jzechne, fings the praise of the Pæriodekeschans, and Keanians, the first and second dypasties of the kings of the Parsses, of the places which afford pasture and shelter to cattle, of light from the first created ox, from which mankind proceeded, and of the soul of Kaiomorts, the first king of the first dynasty.

On this occasion, it may be remarked, that, in the works of Zoroaster, he never speaks of any but the two first dynasties of the Parsses, that of the Peschdadians, and the Keanians, which proves that they were composed under the latter of

the two.

The third work, contained in the Vendidad Sade, is the Viffpered; if this treatife should be thought incompleat, it may be taken as part of the Bagantassi, the fifteenth work of Zoroaster, which contains an eulogium on the creatures created by God.

Viffpered fignifies knowledge of all: This work confifts of 27 small chapters, which are called Carde,

portions.

Tchangregatcha, a celebrated Bramin of the Indies, hearing the fame of Zoroaster, went to see him, and Zoroaster pronounced before him the Vispered, which begins by the eulogy of that Bramin. The Parsfes suppose every class of animals to have a particular chief, to whom the Peblvic Cosmogony gives the title of Destour, or Doctor; and Zoroaster as a testimony of Tchangregatcha's merit, set him over the Destours of the animals of the earth and waters.

The Vispered afterwards speaks of fix feasts of five days each, called Gabanbars, which were established to commemorate the fix periods of time in which the world was creat-

ed: it contains all reveral officer of praise, addresses to all that has been created or exists, whether animate or inanimate; among the inanimate things, which are thus ad. dreffed, is the Sfetout Jescht, the first work of Zoroaster, which treats of the nature of God, and of the angels, and the Jzeschne; praise is also offered to angels, to animals, to Hadokbt, the twenty-first treatise of Zoroafter, to the ox from which the first man proceeded, to the river Varkass, to the Honover or word, and to the Eschemwobou; this prayer pronounced in the hearing of those who are so near death as to be speechless, is faid to afford them great advantages: the tree called Hom, is also celebrated in the Vifpered, in which the Djouti, and the Raffpi, are represented as performing religious ceremonies round the fire; and Zoroaster addresses himfelf to the fword of the Lord, to the club or mace with which the angel Meher strikes the devil, who would defolate the world, and to the bridge which separates heaven from earth.

Holiness is particularly recommended to priests, and marriages between cousin germans to the rest

of the faithful.

Laftly, the Viffpered gives the names of the seven empires, or parts of the world, Erezebio, Sseouebio, Frededasschebio, Voroderestebio, Vorodjeresbio and Keneretche. The Peblvic Cosmogony places Erezebio to the W. Sseouebio to the E. Frededasschebio and Videdasschebio to the S. Vorodjeresbio to the N. and Keneretche, which includes Iram, in the centre of the earth.

The fituation of Voroberestebio we are not told.

Several small fragments taken from the Zend pieces, which will be particularly mentioned in the sequel, are also sometimes found in the Vendidad Sade, besides the three works already mentioned; the copy here referred to, was made in the year of Jesdedjerd, 1083, and in the year of our Lord 1713 †. At the end of the volume appears the following paragraph, written in modern Persic, with Zend characters.

At Gah Avan, on the happy day Zamiad, of the bleffed month Meher, in the year 1083, of Jesdedjerd, king of kings, a prince mighty mpower, the copy of this book called Djedjewdad, was compleated, with a fatisfaction that alcended in praise to the Supreme Being, by the flave of the law Darab Erbed, an inhabitant of Naucary, and the fon of Roustoun, who was the fon of Daval; let him who shall read or recite this book, offer up a prayer for me in this world, that in the next my foul may be happy: according to this word, the pure spirits of paradise have eternal

II. The Vendidad in Zend, and Peblvic mixed with Pabzend, collated with the copies of Bikh, the Deffour Mobed of Surar, and that of Darab his adversary, and corresponding exactly with all the Vendidads of Surat. This work is a folio of 488 pages.

When the Parsses sted from the persecution of the descendents of Omar into India, they carried the books of the law with them, but the

diffresses and confusions of war, and the connections which they formed with the Indians, produced infenfibly fuch a neglect of the Pehlvic, that the translations of it into that language being loft 450 years ago, nothing remained of the Vendidad but the fix first chapters, translated from the Pelvic into Samskretam; but, at this time, one and twenty chapters of the Vendidad Zend, with a Pehlvic translation, were brought from Sfiftan to India, by the Deftour Ardeschir, from which two copies were immediately made, and from thefe all the copies now in use at Guzarate have been transcribed: the copy now brought into France was made in 1757.

III. The Jzeschne Zend and Samskretam, and Jeschts Sades; a folio of 616 pages.

The Samskretam translation of the Jzeschne from the Peblevic, contains only the first 66 chapters, and for these, the world is indebted to the care of the Mobeds, Neriossengue the son of Daval, and Ormusdiar the son of Ramyar, who about 300 years ago, translated from the Pelvic into Samskretam, all that is now to be found in that language.

The Jeschts Sade is a volume which contains 18 Jeschts, and many Persic and Zend works in Zend characters.

The Jeschis are pompous praises of Ormusd, and the 15 angels, whose names are Ardihescht, Khordad, Avan, Khorchid, Mah, Tir, Gosch, Meher, Sserosch, Raschnerast, Farvardin, Behram, Aschtad, Hom, and Venant.

There is a copy in the Bodleian library at Oxford, which was made annound bom 1680, and brought over in 1723, by Richard Cobbe.

Zoro-

Zoroafter, in the Ormusd Jescht, demands of Ormusd, "What is that fublime and delectable word which, gives victory and diffuses light; which to man is the guide of life, which disappoints the efforts of the malignant spirit, and which gives health at once to the body and the foul," " That word, answers Ormufd, is my name; I am called the god who loves to be confulted, the father of men and flocks, the powerful, the pure, the coelestial, the feed of all that is good, the author and preserver of all that is pure, the fovereign intelligence, and he who communicates it; knowledge, and he who gives it; excellence, and he from whom it flows: the prince of holiness, the fountain of felicity, he in whom there is no evil, the strong who is not wearied, he who numbers and weighs all things, the giver of health, the righteous judge, the being who neither is deceived, nor deceives, finally the god who recompenses. This is my name, have it continually in thy mouth, and thou shalt have nothing to fear, either from the bow or the Tchakar, neither from the javelin nor the poignard, from the fword or the mace. At this answer of Ormusd, Zoroaster proftrated himself before him, and faid; " I adore the intelligence of God which contains the word, his underständing which meditates it, and his tongue which pronounces it without ceafing."

The Farwardin Jesth, is a work of 31 chapters; the angel Farvardin, to whom it is addressed, presides over the Ferouers, or first principles of all that exists, whether spiritual or corporal; and Zoroaster, in this Jesth, renders homage to all the

Ferouers: he speaks, on this occafion, of the kings and great men who lived at Gustassp, and characterizes them by some striking particular; and many of the facts which appear most extraordinary in the Peblvic Cosmogony, are confirmed by some words scattered here and there in the Farwardin Jescht.

Of the other works contained in the Jescht Sades, the following are

the chief,

1. The five Neae/cb, which are devotional pieces, in the form of praise addressed to the angel of the sun, to Meher, to the moon, to the water, and to the fire; the Neae/cb, which is in Zend, is only an extract of the

Jescht to the same angel.

Zoroaster, in the Neaesch to the fun, pays to that planet only the worship of praise. He first humbles himself before Ormusd, and renounces all the fins he may have committed in thought, word, and deed; he then addresses himself to feveral angels; to Meher, the companion of the angel who prefides over the fun, whose splendor is superior to that of all other coelestial fpirits; to heaven the work of the almighty, to endless duration and to time; he then proceeds to the eulogy of the fun. " I adore the fun, fays Zoroaster, who never dies, who comes on shining with light like a vigorous horse. When he caules his influence to be felt, when he waxes hot, when he appears with an hundred, with a thousand coeletial fpirits who accompany him. He diffuses light through all nature; he scatters it like rain, and deals it with profusion to the earth which God has created; he is a fountain of abundance to the world of parity;

when he and the lakes."

when he arises he purifies the earth and the waters, the mountains and the vallies, the rivers and the lakes."

Zoroaster then proceeds to the praise of Meher, who presides over farms and villages: he strikes the devil with his eternal mace; he has a thousand eyes and a thousand ears; he is continually busied about the law and the good of mankind;

and he never fleeps.

ay: The name of Meher in Zend is Methrem, of which is formed Mithra, supposed by the ancients to be the sun, because he is often mentioned in praises addressed to that planet, but at most, he only seconds the sun in his functions; and the importance of his ministry to mankind has produced that particular regard which the Parsses have always expressed for him.

In the Neaefch of fire, Zoroaster, after having invoked Ormusd, addresses himself to fire as the object of worship, by the name of the son of God, or the created of God.

2. The four Patets. The first is called Mabresspand, and the second Patet Moktat, which are read on behalf of the dead; the third is recited by the living for themselves; the south is called Patet irani, because it is most used.*

A Patet is a confession of sin, accompanied with repentance and shame for having committed it. The sinner in the presence of sire, or of the Destour, pronounces sive times the prayer called Jetha abou verio; then addressing himself to god and the angels, he says, "I repent with consusion of all the crimes I have

committed in thought, word, and deed; I renounce them, I promife to be pure in thought, word, and deed. May God have mercy upon me, and receive my body and foul in this world, and that which is to come!" The penitent then proceeds to a particular mention of his fins, which are of twenty-five different species.

These confessions are modern Persic, mixed with Pelvic. They are thought to have been composed in Pehlvic by Aderhad Mahresspand, the thirtieth descendent from Zoroaster, a celebrated Destour, and restorer of the law under the reign of Sapour, the successor of Ardeshir Babekan, who lived in the third century of the christian

ara.

3. The Afergans. These are prayers in Zend, consisting of several passages of the Avesta brought together, and are supposed to be of a later time than that of Zoroaster. These prayers which are mixed with thanksgiving, are addressed to the Gahanbars, to the Gahabas, names of the last five days of the year, to the angel Dahman, and to the angel Rapitan, who presides over the second part of the day, called Gah Rapitan.

The Gabanbars are festivals of five days each, which were instituted in memory of the creation of the world, or at least of its being reduced into order, which, according to the Parsses, was a work that continued three hundred and fixty-five days. Of these Gabanbars there are

fix in every year.

Mediozerem the first Gahambar,

The name of the third is not mentioned.

is celebrated in honour of the creation of the heavens, which lafted

five and forty days.

Medioschem, the second Gahanbar, was appointed in commemoration of the waters, which were created in fixty days,

Petefeben, the third, refers to the creation of the earth in 75 days.

Eiatremeche, the fourth, to the creation of the trees in 30 days.

Mediareie, the fifth, to the creation of animals in 80 days; and Hamespetemede, the fixth, to the creation of man in 75 days.

4. The Afrans, which are free

dern Perfic.

5. The prayers which are addressed to the five Galis, over which five different angels prefide. The Parffes divide the day into five parts, which they call Gabs, times; the first is Gab Avan, which begins at funrifing, and ends at noon; the fecond Gab Rapitan, lasts from noon to three o'clock; Gab Ofiren the the third, lasts from three o'clock; to fun-et : Gab Evefferoutren the 4th, lasts from fun-fet to midnight ; and Gab Ofchen the 5th, from midnight to fun-rifing. These prayers to the Gabs are in Zend.

6. The Neka. The Neka is the benediction given by the Mobed to the faithful, and is written in Pehlvic, mixed with modern Persian. Doctor Hyde had a copy of this work, which he calls Zend Avesta, though the passage which he cites

from it is in modern Perfic.

7. The Nerengs. These are little forms of prayer which the Parsses are obliged to recite on the most common occasions, when they begin a piece of work, or when they

fet out on a journey. They my be compared to our collects, and are in modern Perfic.

The MS of which I have now given an account, is very ancient, and without a date. I faw a copy of it at Dr. Hunt's, professor of Arabic at Oxford, which was brought into England by Mr. Frafer, who obtained it of Bekh, the Destour Mobed of Surat. Dr. Hunt had also copies of the Zend Nearsters, which were made in the year 1672, and had been in the collection of Dr. Hyde.

IV. Ssirouse in Zend and Pehlvic; Neaeschs, Ormusd Jescht, and some other pieces Zend and Pehlvic; Aboubenim, Zend, and Persic; and Ravast, translated out of Persic into Indou: this is a folio of 394 pages.

The first of these pieces is in praise of the angels who preside over the 30 days of the month. Spirouse signifies 30 days. There are two tracts of this name, the great and the little Spirouse; but the little one is only an abridgment of the other.

In the Sfirouse, fire is called the light of the Keamans: this element, according to the pure theology of the Parsses, contained in the writings of Zoroaster himself, is nothing more than a sensible emanation of that fountain of uncreated light, which, in the beginning, contained the prototype of all beings.

With respect to the Neaefebs, the reader may consult the article of the Jeschts Sades; and, on the Aboubenim, he may consult the account of the Jesche. The 9th, 10th, and 11th chapters of which are distinguished

The Rawaet, is a collection of answers from the Destours of Kirman, to the letters of Tchengatcha, a celebrated Parsse, who lived in India about 300 years ago, and who consalted them upon many points of the law, which time had rendered doubtful and obscure. In imitation of Tchengatcha, the Destours of India have ever fince written to those of Iran, when any doubt has arisen concerning the law, and the answers have been collected into what they call Rawaets. Rawaet signifies custom.

V. The Vendidad Zend and Pehlvic mixed with Pabzend, revised and corrected by the Destour Darab; the Visspered Zend and Pehlvic; the Sjerosch Jescht, Hadokht Zend, Pehlvic and Samskretam, and the Ssrouse Zend and Persic. This

is a quarto of 628 pages.

This copy of the Vendidad is not incumbered with the ridiculous commentaries of ignorant transcribers. The Destour Djamassp, a man much celebrated for his learning, coming into India about five and thirty years ago, to put an end to the factions and divisions which have been already mentioned, Darab studied the Zend and Pehlvic under him; and to Darab the world is indebted for this book, which is the most correct copy of the most considerable work of the Parsic legislator.

An account of the Viffpered and the Sprouse has been already given; the Sprouse Jescht Hadokht is extracted from the twenty-first work of Zoroaster, which is called Hadokht, and is a prayer to the angel

Sferosch, who, according to the Parsses, is king of the terrestrial world, and presides over all the living. A second Sferoscht Jesche occurs at the end of the Jasschne.

VI. Jzelchne Sade, a quarto of 390 pages. This volume contains the Jzelchne without the Vendidad, and the ceremonies used in this part of the liturgy are explained in Indian, written with modern Samskretam characters. Of this MS, which is very ancient, and without date, Dr. Hunt had two copies, in both which the ceremonies were wanting.

VII. A collection of tracts and extracts in Zend and Pehlvic, containing 322 pages in quarto. This MS is valuable, as well for the pieces it contains, as for its fearcity. The Destour Djamassp declared, he had not feen one in Afia for 30 years; and this copy was thought to be the only one in India. It contains five and twenty pieces, fome in Zend, and others in Pehlvic, the names of which occur in many modern compositions. The principal are some parts of the Jzeschne tranflated into Pehlvic, a small Zend and Pehlvic vocabulary, the Babman Jescht, the Virafnama, and the Boundehesch.

The Bahman Jescht exhibits, in the sorm of a prophecy, a brief history of the empire and religion of the Parsses, from the time of Gustasses, from the time of Gustasses from the world. Zoroaster sees in a dream a tree spring out of the ground, and put forth sour branches, one of gold, another of silver, a third of brass, and a fourth of iron; he sees these branches also interwoven with others. He also drinks some drops of a water which he received from

Ormuld,

Ormusd, and is filled with divine intelligence during feven days and feven nights, and fees a tree which bears feven fruits, each of a different metal. Of these visions there are particular explanations, which feem to me to have been made in the fourth dynasty of the Persian kings, or perhaps later; nor does the work itself appear to be genuine.

The Virafnama is the history of the mission of Viraf. The law of Zoroafter being obscured by doubt and uncertainty under Ardescher Babekan, chief of the fourth dynasty, Viraf, the only one out of 40,000 Mobeds, who was found fufficiently pure to confult the Supreme Being, was appointed to execute that important commission. This new prophet, after having feven times emptied the cup of Gustaffp, which had been seven times filled with wine, went to fleep, and while he slept he saw visions, of which he gave an account when he awaked, with an exactness that is not the characteristic of inspiration.

This book is divided into two parts; the first contains a description of the different places which shall be inhabited by the blessed, and the pleasures with which they shall be furrounded: the second represents the horrors of hell, and the punishment of the damned.

Boundebesch is the name of the Cosmogony of the Parsses: word fignifies to give the root, or existence. The original of this work was in Zend, and is attributed to Zoroaster. As to the Pehlvic verfion, it has been altered by the transcribers, as appears by its want-

ing the two last dynasties of the Per. fian kings: and it is common for the Parsses, whether transcribers or translators, to insert in Pehlvic tranflations, modern names which are not in the Zend, in order to give a prophetic air to their legislator. The criticism of a Destour does not examine with the most severe penetration, what is favourable to his re-

ligion.

In the Boundchesch, endless duration or eternity is made the first principle of Ormusd, who inhabits the first light, and of Ahriman, who dwells in primæval darknefs. The subsequent part of the work, gives an account of the mixed operations of these two beings as secondary principles; of the creation of the pure world by Ormusd, and of the impure world by Ahriman. Ahriman immediately interrupted the order of the universe, raised an army against Ormusd; and having maintained a fight against him during fourscore and ten days, was at length vanquished by Honover the divine word: then Ormusd created the Ox that was killed by Ahriman, and from this Ox proceeded the first man, called Gaiomard, or Kaiomorts. Before the creation of the first Ox, Ormusd produced a drop called the water of health. He also produced another drop called the water of life, before he formed the first man; he put this drop upon the body of Kaimorts, which was beautiful and white, and which, by virtue of this drop, appeared like the body of a youth of 15 years

After the death of Kaiomorts, there fprung up from his feed, which was shed upon the ground, a tree, tree, th the na united : a coupl was cal Meschin upon th pent, se allegian ing the fole aut man a him, b will pe rection. chine c vestmer fruit v

Some time after, there were born of Meschia and Meschine, two couple, male and semale, from which proceeded seven other couple, also male and semale: they became parents in about fifty years, and in about one hundred years died.

One of these seven couples was Siamack and his wife Veschak, who had twins, a male named Frevak, and a semale named Frevakei: from this couple proceeded sisteen others, which produced sisteen nations, and multiplied considerably. Nine of these colonies passed the Euphrates upon the back of the ox Staresscok, and established themselves in the six Keschwars, (i. e.) the six parts of the world: the remaining six colonies continued in the Kounnerets.

Among the chiefs of these fix colonies, are reckoned:

rst. Taze, and his wife Taza, from whom the defart of the Tazians, now Arabia, derived its name.

2d. Osching and Gondje his wife, from whom proceeded the *Iranians*, (i. e.) the Persians.

3d. Mazendran 1, whose descendents have inhabited Ssour, Avir, Tour, Tchinesstan, Dai, and Statad: thus the posterity of Frevak peopled the seven parts of the world.

The reft of this Cosmogony is very much extended, and treats of many subjects. It contains many particulars concerning rivers, mountains, trees, and animals, which, as well as the trees, proceeded from the first ox: it treats also of the several species of fire. There is one fire which is always in the presence of Ormusd, and another which resides in animated beings: by which it appears, that the Parsses consider fire as an emanation of the principle of life and action which resides in the Supreme Being.

In the beginning of the Boundchesch, mention is made of a rain of forty days. This work also contains an account of the events which shall precede and follow the refurrection. At this great catastrophe, " the mother shall be separated from the father, the fifter from the brother, and the friend from the friend; the just shall weep over the damned, and the damned shall weep over themselves; for a righteous father may have a fon worthy of hell: of two fifters, one shall be pure, and the other corrupt; and each shall receive according to their

This account of the origin of mankind, feems to contradict the account given above, where the creation of man is represented as the last work of the creation, and as taking up seventy-five days.

His wife is not mentioned.

works. When Goulicber (the comet) finding itself in its revolution below the moon, shall fall upon the earth, the earth shall be disordered, and tremble as the lamb trembles before the wolf; the heat shall then cause the mountains to slow like a river; all men shall pass through that burning lake, and be purished; the righteous shall feel but a gentle warmth; the wicked shall suffer by the heat, but shall at length be purished and happy."

The Boundchesch concludes with the genealogy of Zoroaster, and the succession of the kings of Iran.

VIII. Four Neaefchs, several Afergans, and some other prayers in Zend and Indian, mixed with Samferetain, 4to. 518 pages.

IX. Nearfebs, in Zend and Indian, with an interlineary version in modern Persic, 8vo. 424 pages,

X. Minokbered, Perfian and Samskretam, 8vo. 434 pages. Minokbered, a word that fignifies the Divine Spirit, is a kind of dialogue, the persons of which are not cer-tainly known. Some think that they are the Divine Being and Zoroafter: its purport is to shew the utility of the law, and the necessity of fulfilling it, notwithstanding the objections of unbelievers. thought to have been originally written in Peblvic; but no copy of it in that language is now extant: besides, this translation of it into Samkretam, there is a perfect verfion both in profe and verse; the profe translation is in the old Rawaet, of which I shall give an account in a fubsequent article: the poetical version was made about an hundred years fince by Ormustor, Destour of Naucary, and is to be found in the Ravaet that was brought into England by Mr. Fraser.

There are two Minokbereds: the larger, which contains fixty-four questions; and the smaller, which contains only four. This volume ends with a Patet, Persian and Samskretam, in which there is a Samskretam version of the Jetha Abouverio, and the Eschemvohou.

XI. Darounfade, 12mo. 238pages. This work is part of the Perfic Liturgy, and confifts of feveral chap-

ters of the Jzechne.

XII. The Rawaet, in Perssic, a folio of 834 pages. This volume is a collection of several Ravaets, made at Bombay by feven Parffic Destours. The first contains several determinations relating to ceremonies; the names of one-and-twenty treaties of Zoroaster; the plans of the places where the Parsses perform their purifications, and of their burying-place: it contains also the Kolassedin, or Essentials of the Law; a treatife in verse and prose, of ceremonies, morals, the shape of the confecrated bread, and the nature of oaths. To these are added the Sogand nama, a treatise on oaths, in which the Parsses are forbidden to fwear, even in favour of the truth. The fecond past contains the conclusion of the Minokbered in verse; a poem which speaks of Guerschaff, the first of the Pehlvans; of Themourets, the king of the dynasty of the Peschdadians; and of Djemchid, his fucceffor; the Zend and Pehlvic characters; an explication of the fetha Abouverio, and the Eschemvobou, with verses upon the Kosti, which is the girdle of the Parffes; the repentance of Djemchid in hell; the Patets; extracts from the Sadder and Nezengs. Sadder fignifies bundred doors, and this tract is an abridgment of Perfic divinity, speculative, practical, and ceremonial:

roafter king G Water, Ormusa the Afermana-naverse. this in Sadder der, been chapter in treat Djamas of a co

XIII. A collection of Persian works, 4to. 446 pages. It contains the Zerdust-nama Namem, or hillory of Zoroaster in verse, his birth, his mission, his miracles, and predictions; Dr. Hunt had a copy of this; the Virap-nama Nazem; the Tchengregratch-nama Nazem, or history of Tchengregratch in verse, the Bramin, to whom the Visspered is addressed: this Bramin having learnt in India, that Zoroaster was propagating a new doctrine in Peria, which was adopted by Gustassp, Djamasip his minister, and his court, wrote to the king, the minister, and Loroalter, and this work contains the letters that paffed between them: the Neaesch of the Sun, in. Zend and Perfic, with Perfic chaafters; the Eulma eslam, a theolo-

gical conference between a celebrated Destour and the Mahometan Mullahs: this contains all the fecrets of the Perfic religion, and makes eternity the first principle of Ormused, of fire, water, and the devil; answers of the Destours of Kirman to the Destours Darab and Kaoufs, concerning the first day of the year; Sadder Nazem, (i. e.) the Sadder in verse; the history of the flight of the Parsses into India in verse; and the Djamastoi Nazem.

XIV. Virafnama, in Indian.

XV. The old Raweat: this includes part of No. XII. and all the

the Parffic liturgy.

XVI. Vadjerguerd; this word fige nifies " that which is explained." It confilts of prayers that accompany certain ceremonies, particularly the cutting of twigs for the Barifom.

XVII. A fmall Pehlvic Perfic dic-

tionary.

XVIII. Chekand Goumani; this word fignifies " doubt broken and destroyed." The author afferts, that evil comes not from God; but that the fource of the devil's malignity is in himfelf.

M. Perron has brought many books, besides those above enumerated, from India; and he hopes, that the knowledge of the ancient Perfic, being facilitated by fo great a collection, will open a spacious field of new discoveries to the learned, and clear the way to a perfect acquaintance with the Vedes, and the antiquities of India. M. Perron, as a proof of his acquaintance with the ancient Perfic, has explained a passage in that language that occurs in Aristophanes, and has hitherto puzzled commentaSome account of a controversy, now fulfishing among the Learned, concerning a supposed-antique Bust at Turin.

I AST year there appeared at Rome a small piece entitled, De inscriptione quadam Ægyptiaca Taurini inventa, & characteribus, Ægyptiis olim et Sinibus communibus, exarată, idolo cuidam antiquo in regià universitate servato, epistola.-Per Turberwillum Needham. In this letter, Mr. Needham, an Englishman, informs the reader, that in the king's museum at Turin is a buft of black marble, commonly supposed to be an antique of the goddess Isis; the face and breast of which are covered with uncommon characters. It came into his head that each of these characters, like those of the Chinese, had a parti-cular fignification. He owns he took this idea from the memoir of M. de Guignes*. Upon this he had an exact copy taken both of the buft and the inscription; and had some thoughts of fending it to China; but meeting with a native of Peking, who belonged to the Vatican library, he shewed it to him. Chinese at first knew nothing of it (nibil prorsus spectu primo intellexit) because he was acquainted only with the modern Chinese characters. But in a Chinese dictionary, in twenty-fix volumes, printed in the time of Kang-hi, he found the ancient Chinese characters set down; and of the conformity of these characters with those on the buft, Mr. . Needham fays, that father Jacquier and Mr. Wilcocks were witnesses as well as himself. At first they made out 12 of the characters, and some days after, all the rest. The inscription, as they interpret it, is as

follows: Frons tam lata est, while sunt carrulei, alba est facies, una (sive primum) persona magna bacus sigura ejus longitudine palmas magna marmoreas cum dimidia habebat mome ejus dem generis, coloris nigri, simis (aut valde) pulchra prius su prasenti tempore tanquam dea varatur SHISOU-CHI.

Mr.

Mr. Needham thinks, that the authenticity of this Egyptian monument cannot be questioned, because, 1. The marble is Egyptian; 2. The form of it and the characters are Egyptian; 3. It has been 30 years

at Turin.

In the conclusion, Mr. Needham triumphs in his having overtured the high antiquity of the Chinese, by proving that they received hieroglyphics from the Egyptians.

This letter of Mr. Needham's has been followed by two others, written on the same subject to the earl of Macclessield, president of the Royal Society, by Edward Wortley Montague, Esq. F. R.S.

In the first of these letters, dated Turin, April 17, 1762, this gentleman acquaints lord Macclesfield, that he went with several learned men to take off the inscription of the buft, called an antique of Ifis; that on comparing the buft with Mr. Needham's plate, none of them could find the least resemblance; and that the characters, of which he himself took the impression from the buft, also differ very much from those in Mr. Needham's plate. With regard to the marble, two eminent lapidaries, after a narrow examination, affirmed it was from a quarry in the neighbourhood of Turin. It is so bituminous, that when heated, it yielded a strong smell of sulphur;

Mr. Needham, who was at Tuin when this letter was wrote, mentioned his suspicion, that the characters on the buft had been changed or altered, fince they had been copied by his order. Mr. Montague, therefore, had them carefully examined, the day before he wrote this letter, by two of the best statuaries at Turin, in presence of feveral persons of learning and diffinction; and the artifts declared positively, that they never had been altered or changed in the least since they were first made; nor could any of the gentlemen present discover my ground for Mr. Needham's fuf-

Mr. Needham also threw out, that this statue might not be the same which the person he employed copied, but another substituted in the room of it. But, Mr. Montague says, none of the gentlemen who were present at either of these examinations of it, and who must have known it for many years, hinted any thing like it.

To excuse the dissimilitude of the bust to his drawing, Mr. Needham came and told Mr. Montague, that he ordered the person, who copied it for him, not to be anxious about the likeness of the bust, it being sufficient for him that it was the bust of a woman. This is the substance of the first letter.

From Mr. Montague's second letter, dated Rome, October 2, 1762, it appears that the abbé Bartoli, one of the professors of the university of Turin, and antiquarian to the king, who took a design, about eight or nine years ago, of the bust and inscription in question, had published a letter, or letters.

had published a letter, or letters,

against Mr. Needham, to which the latter replied, and in his reply every where joined Mr. Montague with M. Bartoli, though he knew that Mr. Montague had never entered into M. Bartoli's arguments. Mr. Needham, in answer to what Mr. M. had objected of the bituminous nature of the stone, says, that all stones, if hard enough, when rubbed with iron, will yield an odour of fulphur: this he had faid at the time of the experiment; upon which Mr. M. in Mr. Needham's prefence, rubbed the stone with a piece of wood, which had nearly the fame effect : but this circumstance Mr. Needham suppresses.

Mr. Needham further alledged, that the stone would be found to be as much Egyptian as the two lions at the Dioclesian baths, and the two sphinxes, and several other undoubted Egyptian statues of the villa Borghesa. But cardinal Albani (who is particularly eminent for that kind of learning) being shewn a small piece of the bust; gave his opinion in writing, to the following effect:

" I protest that I cannot find in the plate of the bust at Turin, either the conformation of the features proper to Egyptian heads, or the style of their sculptors, both the one and the other being absolutely different in the above-mentioned, from many undoubted monuments and statues of that nation; and, according to a defign fent me of it, I cannot find out the bust in question to be Egyptian. I leave the characters as they are, which appear to me to be magical, and of that figure which one finds on some gems, and which are known by the name of Abraxas; but the stone of the bust, of which the gentleman

(Mr. Montague) thewed me a small piece, is a fort of Bigio, which is foft, and of a nature different from the stone of which the lions of the Pontana Felice, and the Sphinx of the villa Borghesa, are made, brought without foundation by Mr. Needham as monuments made of a stone fimilar to that of the buft; the flone of these Egyptian monuments is extremely hard, and it is with difficulty it yields to the best tempered tools."

b With regard to the figure, abbe Winkleman, than whom no one has greater kill in antique ftatues, perticularly Egyptian, gives his opticharacters, and that swolled a noin

251 There are two epools in the Egyptian into ward nitwo different ftyles, The first will come down probably to the sanquelt of the Greeks, and the statues made to that time do not differ in their flyle one from the others and, according to what Plato days of themothole which were made in his time were in every thing like those, which were fuppofed to have been made thous fands of years before moThe fecond. epocha of the Egyptian art, is the flyle, when the sculptors of that reft the point here ? having hewn nation (freed from the rigorous both Bartoli's letter and Needham's laws of the ancient government, answer, to Monfignore Assemant which obliged them in their flatues to follow exactly the forms anciently established) began to adopt the gentleman gave his opinion in thele the same value which the Chibrow dath rabnus salas and of chance Grecian government in Egypt. And: that is plainly feen in many figures, ters engraved upon the known bulk as well in the features, as principally in the drapery ; that is to fay, the Greeian manner mixed with the ancient Egyptian, ereftered ode tedt

There is a third fort of figures, king of Sardinia, and not confining generally called Egyptian, which myself to give testimony touching are nothing but imitations of the the difference between the copy and

were made by order of Adrian, and were all found in his city Tivolis thefe are diftinguished from the na by the stone, which is a Bigio Mo. rato. The buit of Turin cannot be placed in any one of these three classes of figures. For my part, I efteem it a modern imposture."

Mr. Needham further infinuates that the variation between his plate and the characters on the buft, dott not effect their effence. In answer to this, Mr. Montague, acknow ledging his ignorance, as well of the Chinese, as of the ancient Egypo tian language, for his own part only remarks, that as both the Chia nefe and the ancient Egyptian are from the east, the length and post tion of lines may possibly be equally effential to constitute and determine the characters of both thefe land guages, as to form the letters in the other Orientals; and in that case, the variation between Mri Needham's plate and the characters on the buft, however fmall it may appear in fome, would be of the ntmost confequence, and effential to the determination of the charactera But Mr. Montague doth not who is allowed far the greatest man we have in Oriental learning, that

We

to the to the force and value of the characters. I fry then, in the first place, that they do not correspond in the least with the hieroglyphicks or Egyptian writing which is engraved on obelifks, sphinxes, or Egyptian statues. And, secondly, I do affirm, they cannot be faid to be the fame with the Chinese characters; and that not only because one discovers phinly the difference between the ancient Egyptian and the Chinese, s any one may comprehend by comparing the Egyptian inscriptions of the obelifes and statues with the chracters which the Chinese have minted in lexicons and other voumes, a great quantity of which ne preserved in the Vatican library d that of the Propaganda; but tent and modern Chinese characen is purely ideal, and because t, however, prove that they have put apon them in the lexicon. It mins then, that the above-menioned characters of the buft of Tuin are modern aftronomical figns, hom various MSS, by Monf. Du ancient Chinese. a asseque

Cange, in the end of his Gloff. med. et infime gracitatis, and by Montfaucon, in his Palaographia Graca, p. 286, 289, 376, where he treats of the Chryptographia Graca, and of magical figns, the which are equally found, but differently formed, by the Africans, Egyptians, and modern Orientals, as well on medals and stones as in manuscripts."

Thus far Mr. Montague's letters. We shall only add, that the antiquarians in France, unwilling to suppose that Mr. Needham intended to impose on the learned world, imagine that his Chinese at Rome affixed a fenfe of his own to the characters, and that his translation is a mere invention. M. de Guignes carefully examined two Chinese dietionaries, without finding any recause the affirmative of the an- semblance in them to Mr. Needham's plate. Thefe dictionaries are in fix volumes. The first is entitled hat conformity is equally without Chousens; the fecond Tehouen tou motation, and purely ideal, which loui, both in the highest esteemin supposed between Mr. Needham's China; and intended only to exfinted copy of the modern Chinese plain the found and figuification of characters taken from the Chinese the ancient characters. The fift, etion in the Vatican, and those which was compiled in the first cenbefared upon the above-mentioned tury of the christian æra, is configo for a moment, though not highest authenticity. It was commining, that the characters on the posed by a celebrated philosopher ware in some measure like those called Hiv-chi, who lived about the the Chinese lexicon; one can time of the revival of learning in China, and applied himself to the the same value which the Chinese decyphering of the ancient characters, which were at that time eagerly fought for. The French antiquarians rightly observe, that Mr. Needham, in order to make out his petenting generally either the fe- point, ought to have proved first, planets, on the twelve figns of that the characters on the buff were Zodiac; the which figns, as undoubted Egyptian; and, next, to the aftrological, magical, che- have shewn in his plate, that they ical, and medicinal, are deligned were conformable to those of the

We must defire our readers to fuspend their judgment in regard to this controverly, till further evidence shall appear. We are informed, that feveral material papers have been published abroad on the fubject, which have not yet come to our hands.

The rife of Chivalry, and the origin of Justs and Tournaments. - Extracted from Letters on Chivalry and Romance.

It would be meritorious, in the highest degree, to fly to their aftiftance, when they knew where they were to be come at: or to feek them out with diligence, when they did not. This last service they called, Going in quest of adventures. Which at first, no doubt, was confined to those of their own party, but afterwards, by the habit of acting on this principle, would be extended much farther. So that, in process of time, we find the knights-errant, as they were now properly stiled, wandering the world over in fearch of occasions on which to exercise their generous and difinterested va-

1. The courtefy, affability, and gallantry, for which these adventurers were so famous, are but the natural effects and consequences of their fituation.

For the castles of the barons were, as I faid, the courts of these little lovereigns, as well as their fortreffes; the refort of their vaffals thither, in honour of their chiefs, and for their own proper fecurity, would make that civility and poiteness, which is feen in courts and infensibly prevail there, a predomimant part in the character of these affemblies Marbon, or

Further, the free commerce of the ladies, in those knots and cirdes of the Great, would operate to far on the fturdieft knights as to give birth to the attentions of galwars of one baron Bouldvitnal

4 It only remains to account for that character of religion, which was adeeply imprinted on the minds of all knights, and was effential to beir institution. Us va ganguist

to resiliate on the enemy, but it

Two reasons are assigned for this fingularity.

First, the superstition of the times, which was so great, that no institution of a public nature could have found credit, that was not confecrated by churchmen, and closely interwoven with religion.

Secondly, the condition of the christian world; which had but just recovered a breathing time from the brutal ravages of the Saracen armies. The remembrance of what they had lately suffered from these enemies of the faith, made it natural and even necessary to engage a new military order on the fide of religion.

And here, by the way, the reafon appears why the Spaniards, of all the Europeans, were furthest gone in every characteristic madness of true chivalry, Their fanaticism in every way was especially inftigated and kept alive by the memory and neighbourhood of their old infidel invaders.

Such was the state of things in the western world, when the crufades to the holy land were fet on foot. Whence we see how well prepared the minds of men were for engaging in that enterprize.

The resemblance between the beroic and Go:bic manners.

There is a remarkable correspondency between the manners of the old heroic times, as painted by their great romancer, Homer, and those which are represented to us in the books of modern knight-errantry. A fact, of which no good account can be given but by the affiftance of another, pot less certain, That the political flate of Greece, in the earlier periods of its story, was fimiralyals of peace.

K 3 ale someti

lar in many respects to that of Europe, as broken by the feudal fy-flem into an infinite number of petty independent governments.

Some obvious circumstances of agreement between the heroic and Gothic manners, may be worth put-

ting down.

The military enthufiasm of the barons is but of a piece with the fanaticism of the heroes. Hence the same particularity of description in the account of battles, wounds, deaths, in the Greek poet, as in the Gothic romancers. Hence that the Gothic romancers. Hence that minute curiouty in the display of their dresses, arms, accourrements. The minds of all men, being occupied with warlike images and ideas, were much gratified by these details, which appear cold and unaffecting to modern readers.

we hear much of knights-errant encountering giants, and quelling favages, in books of chivalry.

These giants were oppressive feudal lords, and every lord was to be met with, like the giant, in his strong hold, or cattle. Their dependents of a lower form, who imitated the violence of their superiors, and had not their castles, but their lurking places, were the favages of romance. The greater lord was called a giant, for his power; the less, a savage, for his brutality.

Another terror of the Gothic ages was, monsters, dragons, and ferpents. These stories were received in those days for several reasons: 1. From the vulgar belief of enchantments: 2. From their being reported on the faith of eaftern tradition, by the adventurers into the holy land : 3. In fill later times, from the strange things told and believed, on the discovery of the new world.

In all thele respects, Greek in tiquity refembles the Gothic. For what are Homer's Læftrigons, and Cyclops, but bands of lawless & vages, with each of them a giant of enormous fize at their head? And what are the Grecian Bacchus. Hercules, and Thefeus, but knights. errant, the exact counterparts of Sir Launcelot and Amadis de Gaule?

3. The oppressions, which it was the glory of the knights to avenge, were frequently carried on, as we are told, by the charms and enchant-

ments of women.

These charms, we may suppose, are often metaphorical; as expresfing only the blandishments of the fex. Sometimes they are taken to be real; the ignorance of those age acquielcing in fuch conceits.

And are not these stories matched by those of Calypso and Circe, the enchantreffes of the Greek poet?

4. Robbery and piracy were ho-nourable in both; To far were they from reflecting any discredit on the ancient or modern redreffers of

wrongs.

What account can be given of this, but that, in the feudal times, and in the early days of Greece, when government was weak and unable to redrefs the frequent injuries of petty lovereigns, it would be glorious for private adventurers to undertake this work; and if they could accomplish it in no other way, to pay them in kind by downright plunder and rapine?

Bastardy was in credit with both. They were extremely watchful over the chaftity of their own women; but fuch as they could feize upon in the enemy's quarter, were lawful prize. Or, if at any time they transgressed in this fort at home, the fault was covered by an inge-

nious hection. The offspring was reputed divine. Their greatest hences were the fruit of goddesses approached by mortals; just as we hear of the coughtiest knights being born of fairies.

6. With the greatest fierceness and savageness of character, the utmost generosity, hospitality, and courtely, was imputed to the heroic ages. Achilles was at once the most relentness, vindictive, implacable, and the friendliest of men.

We have the very same representation in the Gothic romances. As in those lawless times, dangers and distresses of all forts abounded, there would be the same demand for compassion, gentleness, and generous attachments to the unfortunate, those especially of their own clan, as of resentment, rage, and animotity, against their enemies?

7. Again: The martial games, celebrated in ancient Greece, on great and folemn occasions, had the lame origin, and the lame purpose, as the tournaments of the Gothic warriors.

8. Lastly, the passions for adventures, so natural in their situation, would be as naturally attended with the love of praise and glory.

Hence the same encouragement, in the old Greek and Gothic times, to panegyrists and poets.

lam aware, that in the affair of religion and gallantry, the refemblance between the hero and the knight is not so striking.

But the religious character of the knight was an accident of the times, and no proper effect of his civil condition.

And that his devotion for the fex hould so far surpass that of the hero, is a fresh confirmation of my system For the confideration had of the females in the feudal constitution will, of itself, account for this difference. It made them capable of succeeding to fiels as well as the men. And does not one see, on the instant, what respect and dependence this privilege would draw

upon them? It was of mighty confequence who should obtain the grace of a And though, in the rich heiress. strict feudal times, she was supposed to be in the power and disposal of her superior lord, yet this rigid Hence we find some distressed damfel was the fpring and mover of every knight's adventure. She was every knight's adventure. She was to be refcued by his arms, or won by the fame and admiration of his prowefs. The plain meaning of all which was this that, as in thole turbulent feudal times a protector was necessary to the weakness of the fex, so the courteous and valorous knight was to approve himfelf fully qualified for that office.

It may be observed, that the two poems of Homer were intended to expose the mischiefs and inconveniences arising from the political state of old Greece: the Iliad, the distensions that naturally spring up among independent chiefs; and the Odysey, the insolence of their greater subjects, more especially when unrestrained by the presence of their

fovereign.

And can any thing more exactly refemble the condition of the feudal times, when, on occasion of any great enterprize, as that of the crusades, the designs of the confederate christian states were perpetually frustrated, or interrupted at least, by the dissensions of their leaders; and their affairs at home

Jerusalem was to the European, what Troy had been to the Grecian

Description of an ancient Grecian Baf-relief, representing the Grotto of Eleufis. By J. Bartoli, Antiquary to bis Sardinian Majefty.

THIS baf-relief represents a grotto, over the entrance of which is an old man with a long beard between two rams, that have each a lion by them. Underneath the lion, on the right hand, is the face of another old man, with a longer beard than the former. In the inner part of the grotto, upon a little elevation, is the figure of a woman, closthed in a long robe that reaches to her feet, and over that is a shorter She holds vest girded with a belt. in each hand a fort of staff, the length of which is equal to the height of the figure. The ground of the grotto, on the left hand, presents the figure of another woman, habited in the same manner; but with a bushel on her head, from which a veil feems to flow, that, fpreading over her back, reaches down to the middle of her leg. On her right hand a dog fits at her feet; and on the same side is a young man, whose head, legs, and feet are bare. He carries a little vale or cruet in his right hand, and with his left holds up the skirts of his garment, which is short. feems to be just entering the gratto, followed by a dog.

Many learned men have supposed this antique to represent the cave of Trephonius; but M. Bartoli, who

Atterbury, and many others, thu in his Eneid the poet has copied living originals, which he has shadowed under fictitious names; and indeed Servius, in the 75 2d verse of the fixth book, fays, "We find in antiquity, that this poem was not called the Aneid, but the Actions of the Roman people." Nothing then can be more useful or more interesting, than to trace in this poem those passages that are applicable to Rome and Augustus. According to the opinion of Warburton, the peet, in the 6th book of his Ancid, had no other defign than to give a defcription of the initiation of his hero into the Eleufinian mysteries; and that, in the person of Aneas, he proposed to give the pattern of a perfect law-giver. M. Bartoli is still more particular, and endeavours to prove, that the initiation of Augustus himself into those great myfteries, was the action celebrated in that book. Dion Caffius, lib. 51. declares, that this prince, after the battle of Actium, paffing through Athens in his return to Rome, was initiated in the mysteries of the two goddesses, Ceres and Proserpine. On this head, the testimony of Suctonius (in the Life of Augustus, chap. 9,) is plain and express.

In the description of the Eleufinian mysteries, under the emblem of a descent to hell, M. Bartoli obferves, that the poet speaks of three different caves: that of the Sibyl in the hollow of a rock, that which led to hell, and that which ferved for the habitation of Cerberus .-This, according to M. Bartoli, is a proof that the mysteries of Ceres and Proferpine were celebrated in a cave; or, at least, agreeable to the

remark of Servius, in a place that had the refemblance of one; and, indeed, nothing is more frequent in authors, than the mention of caves or grottoes of Ceres; and nothing was more common in ancient temples than fubterraneous places. But, it may be asked, what is the meaning of the three caves, of which Virgil speaks? Doubtless they are defigned to illustrate the three different parts of the initiation. The fift only regards the little mystenes, the greater were referved for the second and third. The first cave was destined to ablutions and reparatory ceremonies. In the cond, those who were initiated acquired the title of Mystes. In the third, that of Epoptes. For a long time there was an interval required between the different parts, and many years were necessary to complete the initiation. But afterwards it was found necessary to abate the feverity of these rules: many princes were admitted immediately from the little to the great mysteries, and doubtless Augustus was one of that number. If A neas is accompanied when he goes to the first cavern, if he parts from his companions at the second, in order to pass into the third, this is to shew that the first part of the initiation was less sacred than the two others; in regard to which, fecreey was enjoined on pain

lt is well known that Ceres, Proferpine, and Triptolemus, had a
great share in the Eleusinian mystenes: consequently a sculptor, who
defigned to represent these in marble,
could not have imagined any thing
better than a cave, with these three
personages. The figure in the surther part of the cavern is Proserpine, represented at the point of

time when the is leaving hell, and returning to her mother, to be fix months with her: this point of time is indicated by Virgil in the words. adventante Dea, and by Claudian in these, Ecce procul Hecate exoritur. Proferpine comes from hell, from a place of darkitels, flygiis emissa tenebris. She has occasion for light, and Bartoli affures us, that what the bears in her hands are two torches. Perhaps, the sculptor defigned likewife to allude to the torches which Ceres made use of to feek her daughter with; a circumstance always preferved in the Eleufinian rites, the fifth day of the festival being confecrated to the torches. Here Bartoli proves, that the ancients gave torches to Ceres and Proferpine.

The fecond figure that appears in the grotto is Geres. The poets relate, that this goddess, having found her daughter in hell, was deter-

mined to remain with her.

There had she stay'd; but pitying Jove prepares

A mild degree to mitigate her cares. Six moons must Proferpine in hell remain.

Six moons in heav'n relieve a mother's pain.

Then Ceres chears her looks, dispels her woes,

Again with golden ears she wreaths her brows,

Again glad harvest gilds the country o'er,

And scarce the barns receive the welcome store.

Ovid Fast. b. 4.

These gifts of Ceres are reprefented by the bushel on the head of the figure: her attitude, her habit, all the enfigns that the sculptor has given her, according to M. Bartoli, strongly Broughy characterife this goddels; and he laments, that, her hands being broken, we are deprived of

further proofs, on

In his opinion, the young man on the right hand of Ceres is Triptolemus, whom that goddels instructed in agriculture; and the little vafe he holds in his hand is the fymbol of the Elevanian mysteries, which he had received from Ceres, and of which he was the institutor.

Atheneus (tib. 2.) defcribes this vale to be of baked earth, and in the form of a top with which children play : he fays, that it was used the last day of the mysteries, to

which it gave its name.

M. Bartoli believes the face of the old man, with a long beard, on the right hand of the erotto, to be only a marque. It is certain, that marques were made use of in the celebration of these mysteries, and perhaps Virgil aliades to this, in those words that relate to the Sibyl:

She warn'd him that those seeting ark colour, efpecierswieringh

Forms without bodies

It is needless to say, that masques were appropriated to Bacchus, and that one day of thele mysteries was fet apart to that god. The sculptor would indicate by this figure, that, under the veil of these rites, the persons initiated were instructed in physics, theology, politics, and particularly morality. They were eaught the falshood of polytheism, the unity of a God, the doctrine of sewards and punishments after this life, the origin of civil fociety, and of the laws: and St. Augustine slib. 8. de civit. Dei) reproached the pagans, that, while they taught the truth only to a few, and to those in fecret, they gave public lessons of Scalden.

impiety. It remains now to know, what personage the sculptor designed to represent by the majur, whether Silenus, Celeus the father of Triptolemus, or Æsculapius, M. Bartoli conjectures it to be Mofæus, who was particularly zealous in these mysteries; and, indeed, be is the first person to whom the Sibyl in Virgil addresses her discourse.

In the last place, the old man, feated above the grotto, appears to M. Bartoli to be Orpheus, the matter of Muszus. We may easily imagine, that this person, who was faid to be the first that instructed mankind in religious ceremonies, must have a great part in the Elec-finian mysteries. He is seated, the attitude in which he is commonly represented; but he appears intirely inactive, and without his lyre, among feveral animals; and this, according to M. Bartoli, shews the understanding of the artist. The two rams by him feem, with earnes looks, to implore his affiltance, if they were apprehensive that the lions would refume their natural ferocity, unless he continued to foften them by the harmony of his mulic. Claudian gives us the fame idea in the preface to his second book: lates might be applied i

A Differtation on the Antiquity of Glass in Windows. In a Letter to the Rev. Tho. Birch, D. D. Secret. R. S. By the Rev. John Nixon, M. A. F. R. S. From the Philo-fophical Transactions for the Year 1758, Vol. L. Part II. before the Royal Society, March 2,

Had the honour last winter to lay before the Royal Society a ew observations upon some of the coriofities found at Herculaneum, Among other articles, I just mentioned a piece of a plate of white glass; and now beg leave to inquire into the uses, to which such plates might be applied in the early age, to which this fragment undoubtedly belongs.

And here a person, who forms his

ideas of ancient cultoms by what he fees practifed in later times, may be ready to offer several conjectures; in some of which he will, probably, be miliaken; as in others he may be justified by the genuine evidences of antiquity

And, first, it is obvious to imagine, that fuch plates might ferve for specula, or looking-glaffes. And, indeed, that specula were anciently made, not only of metals, and fome stones, as the b phengites, &c. but also of glass, may, I think, be col-lected from Pliny, who, having mentioned the city of Sidon as formerly famous for glass-houses, adds immediately afterwards, Siquidem then it is to be observed, that before the application of quickfilver in the constructing of these glasses (which, I prefume, is of no great antiquity), the reflection of images by fuch specula must have been effected by their being beimeared behind, or tinged thro with fome dark colour, especially black, which would obstruct the refraction of the rays of light d. Upon these hypotheles (improfing the tincture to

affigned. It may further be fuggefted, that plates of this kind might be in-

be given after fusion) the lamina be-

fore us may be allowed to be ca-

pable of answering the purpose here

In a paper read Feb. 24, 1747. See Art. xiii. p. 88.

tended

Porticuum, in quibus spatiari consueverat (Domitianus) parietes phengite apide diffinxit, e cujus splendore per imagines quicquid a tergo fieret, provideret.

Plin. Nat. Hift. lib. xxxvi. c. 26. 5. 66. Pliny mentions a kind of glass or jet called obsidianum :- nigerrimi coloris. Monando et transfucidi, crassiore visu, atque in speculis parietum pro imagine umbras reddente. Nat. Hift. lib. xxxvi. c. 26. 6. 67.

And that the practice of ftaining glass was known in his time, appears from That he fays concerning the obfidianum mentioned above :- Fit et genere tinclarg --- totum rubens vitrum, atque non translucidum. Ibid.

tended to be wrought into lens's. or convex glaffes, either for burning or magnifying objects placed in their focus. But this designation cannot be supported by proper vouchers from antiquity. On the contrary, we are informed, that the ancients used either specula of metal, or balls f of glass for the former of these purposes; as it is well known, that glass was not applied to the latter, in optical uses, till the beginning of the XIIIth century 8.

However, we may with greater probability propose another use, for which the ancients might employ fuch plates of glass, as are now under confideration, wiz. the adorning the walls of their apartments by way of waimfcott This I take to be the meaning of the vitree camera mentioned by Pliny who intimates, that this fashion took its rife from glass being used by M. Scaurus for embellishing the scene of that magnificent theatre, which he erected for exhibiting shows to the Roman people in his ædileship. And we may collect from the same otion Plutarch makes of a

author! (what is further confirmed by his contemporary m Seneca) the this kind of ornament had been admitted, in his time, into chambers in houses, baths, &c. Whether the plates used for this purpose were flained with various colours (a mentioned above), or had tintid divers kinds applied to the back part of them, I shall not pretend to determine: but in either way they would have a very agreeable effect.

The last destination, which the obvious congruity of the thing it felf, countenanced by the practice of many ages paft, as well as of the present time, would induce one to ascribe to such plates of glass, in that of windows for houses, baths, portico's, &c. But I am sensible, that whoever should be hardy enough to advance fuch an hypothefis, would be cenfured as an innovator, in opposing the general opinion of the conneisseurs in antiquity. These gentlemen are almost unanimous in afferting, that whenever we meet with mention made of specularia in ancient writers (efpe-

it was to vied exclutive of other

Now that this lapis specularis, or phengites, was really used for windows by the ancient Romans in their houses, & cannot be denied; since (according to the opinion of the learned sin antiquity) this usage is mentioned by Seneca among other improvements in luxury introduced in his time. But whether it was so used exclusive of other materials (particularly glass), may,

I think, admit a doubt. Salmafius is of opinion s, that nothing can be determined upon this point from the word specular itself, which feems to be a generical term, equally applicable to windows of all kinds, whether confisting of the lapis specularis, or any other transparent substance.

And as (according to this learned writer) there is nothing in the term specular itself, which hinders it from being extended to windows made of other materials besides those abovementioned; fo others imagine, that there are some intimations in ancient authors, which require, that it should actually be so extended. Thus Mr. Castells, the ingenious illustrator of the villa's of the ancients, thinks , that "if this had not been the case, Palladius would not have given directions to his hufbandman to make specularia in the clearium ", or flore room where the olives were preferred. For it appears (fays this author) from Pliny's describing a temple built of the lapis specularis, or phengites, as the greatest rarity in his time, and the mention Plutarch makes of a room in Domitian's palace lined

I suppose he means that of Fortupa Seiz. Lib. xxxvi. c. 22.

esough for hulbsedmen to purchale to win in such quantities, as were required for the purposes mentioned above.

I shall not take upon me to decide upon the weight of this argument of Mr. Castells , but only obferve that if any one should be ininced by it to think, that the vie of glafs for windows may be of much greater antiquity than is commanly allowed, or even as old as the fragment, which occasions these remarks, he may find other probable reasons to corroborate his opinion. As first that there feems to have bam a matural and obvinus tranfition from the practice of using glale plates for the grammenting the walls of apartments o to that of introducing light into these spartments, (as we find the lapis specularis was in faft employed at the fame time for both those purpoles) and confequently it feems reasonable to suppofe that the latter of these appliions could not be long in point of time after the former But it appears, from the authorities produced above that the former of these usages did actually subfift in the age y of Pliny; and therefore before the destruction of Herculawhence we may draw no improbable conclusion, that the latter de fination of plates of glas, (on for window fences) did likewife precede the same event.

Mem

Give me leave to add further, that this presumptive argument in favour of the antiquity of windows made of places of glafe, receives a additional force from the close relation, which must be allowed to subfift between them, and those composed of the lapis, specularis. The former must be looked upon as as improvement upon the other, a they answered all the purposes of convenience, and at the same time were more beautiful; and being the manufacture a of Italy, might probably be purchased at a less expence, Upon all which accounts it feem reasonable to conclude, that one of these inventions would naturally be introductory to the other: and confequently, that as window-lights of the lapis feedlaris began to be used within the memory of Seneca, who died b under Nero, about anno Christi 68. (Helvic), the original of those of glass may have fair pretensions to a place within the period. affigned in the foregoing paragraph, vix. fome years before the deftrac-

y Salmasius, speaking of the custom of adorning chambers with glass, says-

I do not find this expressly afferted by Pliny: but it might have been so in factor This fashion indeed was not begun till after Agripps had built his therma: but if we suppose that to have been even as late as his third consulthing, vin. and Christ. 27. (Helvicus), when he erected the Pantheon (or at least its portico), near adjoining to those therme, there would have been sufficient room, from that period to the birth of Pliny (viz. anno Christi 24), for the introduction of this usage.

HOR

To conclude: I need not observe to you, that all the evidence here produced to prove the usage of glass windows to have been cozeval with the fragment we are now confidering, is of the conjectural kind only: for, I must confess, I have not been able to trace it up by any politive authority higher than about 200 years short of the epocha last entioned, viz. to the latter end of the third century 4, when it is exrefly mentioned by Lactantius in thele words :- Manifestius est, mentim este, quæ per oculos ea, quæ funt sposita, transpictat, quasi per sene-fres lucente vitro aut speculari lapide bdudas. - De opificio Dei, cap. v.

Is the foregoing observations, Mr. Nixon bas fince added the following, extracted from the same useful and entertaining collection. Vol. LII. part I. for the year 1761.

reasonable to conclude.

Napaper, which I had the honour to prefent to this learned Society about two years ago, I offered my neum. I now beg leave to add fome more observations, with a view partly to explain and support what I then delivered, and partly to communicate fuch new informations, as I have fince received, relating to the fame subject.

I observed b, upon the authorities produced by Monf. Renaudot ; that glass plates were not applied for magnifying objects in optical experiments, till the beginning of the thirteenth century: but, upon reviewing his differtation, I find he finks the antiquity of that utage a century lower that this. That learned writer adds further, "That with regard to the question, whether the ancients made their aftronomical observations without telescopes, the affirmative is looked upon as certain ; because if this invention had ever been known before, there is all imaginable reason to believe. that the utility, which would refult from it, not only in altronomy, but for feveral other purpofes, would have prevented its being afterwards loft." Monf. Renaudot declines entering into this controverly; but observes, that Mabillon mentions a manufcript he faw in an abbey boughts upon fome plates of white in the diocele of Freifingen, where glas found in the rains of Hercula in Ptolomy was represented observ-

. Fid. fupra.

3 Plin. Ep. V. 1. 111; a Plin. Nat. Hift, lib. pax

Anno Chrifti Sorradmana gnun

In order to justify my placing the testimony of this father so high, I would observe, that St. Jerome (De Scriptor. Eccles.) says, that Lactantius Extrema faedul magister Casaris Grispi filis Constantini in Gallia fuit. He must probably har exercifed this charge between auno Christi 309, when Constantine began to agn, and 320 dilf he was then of a great age, he might have composed the tranic, out of which this authority is produced, and which was one of the carled of his works, that are extant (Vid. Sparkii prof. ad Ladant.), 40 years before, wiz. about anno Christi 280; which brings us up to 200 years after the werthrow of Herculaneum, as above.

See the foregoing paper.

Mem. de l'Acad. des Inscrip. Vol. I.

ing the flars with a d tube, like our modern perspective-glasses. This manuscript is faid to have been written in the beginning of the thirteenth century; which date (fays Monf. Renaudot) is the more remarkable, because plain spectacles, which should seem likely, in the nature of things, to have been invented first, do not appear to have been known till a hundred years after. Then, having produced the evidences, which prove, that this latter discovery was made about the time above-mentioned, he concludes with faying, " that we have nothing of this nature with regard to telescopes."

The reason of my enlarging upon this article is a passage I have lately met in that learned antiquary, Mr. Rowland, which may feem to contradict the observation produced above. This author alledges the authority of Hecatæus (apud Diod. Sic. tom. i. p. 159. Ed. Weffel.) for faying, that the Hyperborei, who inhabited an island in the northern ocean, opposite to the Celtæ, " could (as if they had the use of telescopes) show the moon very near them, and discover therein mountains, and heaps of rocks, which that instrument only can difcover." That we may diftinguish how far Hecatæus is concerned

in this passage, it will be proper to give a literal translation of it from the original; viz. " They fay forther, that the moon, viewed from this island, appears to be but at a very little distance from the earth, and to have certain protuberances, like land, visible on her surface." Now it may be observed, in the first place, that his phænomenon, if real, may perhaps be explained by the refraction of the moon's rays in passing through the atmosphere of the earth, which, in an island fituated very far north, might be continually charged with an extraordinary quantity of vapours. Or further, as Hecatæus mentions it upon hearfay only, and fubjoins fome other circumstances in the same chapter relating to this island, which are entirely of a fabulous caft, we may juttly question the s truth of the fact; and confequently, shall not be obliged to maintain the necessary existence of telescopes in those times, in order to account for

As it appears h, that neither the lapis specularis, nor glass, was used for windows before Seneca's time; and it cannot be supposed, that the Romans, a people of so refined a taste in other instances, would suffer their apartments to be exposed to the free entrance of winds, &c.

Mabillon does not mention, that the tube had glasses; neither indeed was that circumstance easily discoverable. Perhaps such tubes were then used only to preserve and direct the sight, or to render it more distinct, by singling out the particular object looked at, and shutting out all the rays reslected from others, whose proximity might have rendered the image less precise.

it may be reasonably asked, What supplied the place of those materials before? To satisfy this enquiry, it is to be observed, that several other materials are mentioned by ancient writers, as ferving the perpose before us; fuch as thin hides, or i fkins, like our parchment, mentioned by Philopenus. Pliny likewife informs us, that the horns of the urus being cut into thin laminæ were k transparent, and supplied, in some measure, the use of our lanthorns; and we may probably conclude, from the analogy of thing's, that they ferved for window-lights alfo; especially, as we meet with windows made of horn (corneum fecular) in Tertullian, who wrote within less than two hundred years after Pliny.

eggs.

To these, we may add the vela, made of 1 hair-cloth, or pieces of hides m, which Pitiscus (upon the authority of Ulpian) says, were in ale before the invention of windows of the lapis specularis, or n glass. Ulpian indeed, in the passage Piticus refers to, only mentions them a subsisting together with the latter: but it seems obvious to conclude, that the vela, being an invention less perfect and commodious, were prior in time to the specularia, which are to be regarded as a subse-

quent improvement of the former. Notwithstanding this, the vela still continued in use, even after the introduction of window-sences of stone or glass, and served as canopies, or pumbrellas, to keep the sun from places exposed to the open air; as the others secured the inner parts of the house from cold, &c.

I took notice P of the natural connection there seemed to sabist between the using of plates of glass for adorning the infide of apartments in ancient times, and the employing them for introducing light into those apartments. This observation has been supported by a letter I received from my learned correspondent, abbate Venuti, at Rome, dated December 30, 1759, wherein he informs me, that he had lately read, in some anecdotes of Cardinal Maximi, " That as they were digging among the ruins on mount Calius, in the last century, they found a room belonging to an antique dwelling house, that had all its fides within ornamented with plates of glass, some of them tinged with various colours, others of their own natural hue, which was dusky, occasioned by the thickness of the mais, of which they confifted . There were likewise in the fame apartment, window-frames WATER THE TEN SE .YE DE COM-

Nam cum laining craffioris effent molis, colorem opacum nigrantemque red-

composed of marble, and glazed with landing of glass." But as the abbate did not take upon himfelf to aftertain the real age of this boilding, I shall not pretend to lay any greater freis upon this difcovery, than I did upon the observation, for the fake of which I produced it; for proving the point I had then in view, viz. that the usage of glass for windows was (probably) nearly of the fame antiquity with that of adorning houses with it.

Informed the Society , that I had not been able to trace up the confiruction of windows with plates of glass, such as these found at Herculaneum, higher than two hundred years thort of the overthrow of that cays but, some time after, a pasfage in Baronius was suggested to dows in the imperial apartment me, which feemed to carry the antiquity of this practice much higher, as transparent as glass ... even to the 42d year of the Chriftiate and It was a quotation from out taking notice of that conclusion Philo Judaus, wherein he gives an account of Ca Caligula's reception the lapis specularis admitted the of the Jewith deputies. . When light, but excluded the violent heat (lays he) we had entered upon our of the fun." This feems to prove, harangue, the emperor perceiving, that the specularia in Martial were that somethings of no small weight made of the same materials, if this affect that

were urged, and that others no les strong were likely to be alledged he broke off the audience, and herried away, with great precipitation, into a spacious half: there walk. ing about, he commanded the windows to be that on every fide, confifting of white glass, resembling places of the lapis specularis, which admit the light, but exclude the wind and the fun."

This authority indeed, if genuine, would have fully answered my purpose; but, upon consulting the text of Philo, I was fully convinced that the cardinal's translation of the latter part of this passage, which alone affects the present inquiry, was directly contrary to the original; which imports, that the winconfifted of laminæ of stone, almost

I cannot leave this passage, withof it, viz. "That the windows of

debant. Venuti. This would be the effect of the ancient glas, if it was of a coarse composition than ours: and that it was so in fact, a very eminent critic, both in facred and profine literature, thinks, may be collected from St. Paul's words, a Con xill 12.11 Now we see, but through a glass darkly."

Specularia puros Admittunt Soles, et fine fæce diem . This reading is espoused by Collesus, the Dauphin editor, who further explains (puros) by (nitidos); nd yet, in his notes, tells us, that hele specularia were of stone or alc; which they could not have ten, confistently with Philo's acbont, but must have been of glass; nd confequently, we should have n evidence in Martial for the ufage f glass in windows, as early as the iff century : for that poet lived in

Rome from A. C. 71 to 100. But perhaps thefe (feemingly) ontradictory readings of the pafge may be reconciled, as to their nie, by interpreting (puras luces) the one, and (puros foles) in the ther, to mean the mild light and armth of the fun, which remained ter the greater part of its rays had een either reflected by the exterior urface, or absorbed within the intrior pores of the stone; or, as filton expresses it,

The fun shorn of his beams. pon this hypothesis, fine face will gnify the exclusion, not of the in, dust, &c. as it is explained by e commentators, who follow this ading; but that of the gross body the fun's rays; and fo will cornde with fine fole diem, in the other

As I quoted - Lactantius (De

Officio Dei, c. viii.) to prove the use of glass in windows in his time, viz. the third century, I hold myfelf obliged to take notice of the cenfure, which Cortius and Longolius past upon this father, and which is as far from being candid, as the authorities they appeal to are from proving it true. These gentlemen, in their notes on Pliny (L. ii. Ep. 17.). boldly pronounce the father miftaken (peccavit Lattantius) with regard to the passage I produced from him: and they support this charge, by referring to Lipfius on Seneca de Prov. C. iv. & Epift. 90. and to Pliny, Hift. Nat. L. xxxvi. c. 26. Now, whoever consults Lipsius on the places here referred to by thefe editors, will find nothing therein. but observations relating to the lapis fpecularis, viz. the reason of its name; the countries where it was found; its use in window-fences, for dining-rooms, bed-chambers, baths, porticos, and even in orchards and gardens. This is what no body ever denied, and what even Lactantius himself intimates, in the a passage before us. How, therefore, this can affect that father's teftimony, relating to the use of glass in windows, exceeds my imagination to conceive. And as for Pliny, I suppose it will readily be allowed me, that no writer how respectable foever his authority may be, can possibly prove another, who lived two hundred years after him, miftaken, when he alludes to the practice of his own times,

As I hope the evidence is now undeniable, which I produced in

this, Dr. Birch has informed me, that I Ed. Ingold 1602 and Pitifeus Specular Lec. and on the ciderange

see foregoing paper.

Manifestius est, mentem esse, quæ ea, quæ sunt opposita, transpiciat, qua Mestras lucente vitro, aut lapide speculari obductas.

my difference, to prove the use of fein windows to have been as early as the third century (not to mention the probable reasons there offered to thew, that it might have subfilted some ages before), it may not be unacceptable to the curious in antiquity, to observe the flow progress this very commodious invention made in travelling towards the west; fince it appears, by our historians that it did not reach our island till the seventh century ; when it was brought hither from France, either by Benedict abbot of Winal or Wilfrid archbishop of Nork as a lanthorns of horn were introduced by king Alfred, about the same time, viz. 680,

Having now proposed all I had to offer relating to the feveral uses of plates of glass, already mentioned in my estay, I beg the Society's indulgence to permit me to subjoin two others, which I have met with

fince that communication.

The first of these was suggested to to me by my (late) worthy friend Smart Lethicellier, Efg; who, laft winter at Bath, informed me, that he had in his collection an urn, of a quadrangular figure, which had been divided into two equal parts by a place of glass, the veltiges of which were fill remaining. He was of apinion, that the cells made by this partition contained the remains of fome pair, eminent either for their conjugal affection, or tome of wthe other connections of focial life. 20 This conjecture, highly probable in itself, is farther confirmed by fimilar examples in, of the fragments of glass, who

antiquity. Thus we find in Mont. faucon the figure of a fquar urn, wherein were contained the alhes of a man and his wife, a appears by the infcription upon it. Another urn is represented (plan lvii,), which held the afhes of a mother and her daughter. To which we may add a third (plate lv.), covered with a fquare fa table of stone, on which were three inscriptions, fignifying, that theremains of three persons, whose relation to each other is not specified were inclosed therein.

The other instance was transmit ted to me by the abbate Venuti, it a letter from Rome, dated September 27, 1759, viz. "That, in dig ging up some ruins in that city few years ago, there was fou an ancient picture painted on marble and covered with a plate of whit glass, like those used in our time for that purpose, only somewh thicker. The picture expressed lady's head, and was of a ver elegant composition." From the last circumstance, the abbate inter "that it could not be the produ tion of any later age;" meaning presume) any period between t decay of good painting among the ancients, and the revival of it amount He further affun the moderns. me, that he faw this picture, which (together with its cover) was dep fited in the cabinet of the marqu Capponi at Rome.

The circumstance of this pie being painted on marble, natural leads our thoughts up to the

be an of painting on Glass, not lost.

From Mr. Walpole's anecdotes of painting in England. After giving his readers the life of Peter Oliver, Mr. Walpole proceeds thus.

THE long life of this person, estimable for his own merit, and Linge, 1622

that of his family, ferred almost alone to preferve the fecret of paints ing on glass—a fectet which how ever has never been loft, as I shall fliew in a moment, by a regular feries of the professors. The first interruption given to it was by the reformation, which banished the art out of churches; yet it was in fome measure kept up in the escutcheons of the nobility and gentry, in the windows of their feats. Towards the end of queen Elizabeth it was omitted even there, yet the practice did not entirely cease. The chapel of our lady, at Warwick, was ornamented a-new, by Robert Dudley, earl of Leicester, and his countels, and the cypher of the glasspainter's name yet remains, with the date 1574 ! and in some of the chapels at Oxford, the art again appears, dating itself in 1622, by the hand of no contemptible mafter. I could supply even this gap of fortyeight years by many dates on Flemish glas; but nobody ever suppoled that the fecret was loft fo early as the reign of James I. and that it has not perified fince will be evident from the following feries reaching to the prefent hour. Daup

liam Price, 1700.

Windows at Queen's, New-college, and Maudlin, by William Price, the fon, now living, whose colours are fine, whose drawing good, and whose taste in ornaments and mosaick is far superior to any of his predecessors, is equal to the antique, to the good Italian masters, and only surpassed by his own singular modesty †.

In Mr. Thorefby's museum was "the picture of Mr. Henry Gyles (called there the famous glass-painter at York, wrought in mezzotinto by the celebrated Mr. Francis Place, when that art was known to few others. Bought with other curiosities of Mr. Gyles's executors." See Thoresby's Ducatus Leadiensu,

page 492.

It may not be unwelcome to the curious reader to fee fome anecdotes of the revival of tafte for painted glass in England. Price, as I have faid, was the only painter in that style for many years in England. Afterwards, one Rowell, a Plumber at Reading, did some things, particularly for the late Henry, earl of Pembroke, but Rowell's colours soon vanished. At last he found out a very durable and beautiful red, but he died in a year or two, and the fecret with him. A man at Birmingham began the same art in 1756, or 57, and fitted up a window for lord Littelton, in the church of Hagley, but soon broke. A little after him, one Peckitt at York, began the same business, and has made good proscience. A few lovers of that art collected some dispersed panes from ancient buildings, particularly the late lord Cobham, who erected a Gothic temple at Stowe, and filled it with arms of the old nobility, &c. About the year 1753, one Asciotti, an Italian, who had married a Flemish woman, brought a parcel of painted glass from Flanders, and fold it for a few guineas to the honourable Mr. Bateman, of old Windfor! Upon that I fent Asciotti again to Flanders, who brought me 450 pieces, for which, including the expence of his journey, I paid him thirty-fix guineas. His wife made more journies for the same purpose, and fold her cargoes to one Palmer, a glazier in St. Martin's-lane, who immediately railed the price to one, two, or five guineas for a fingle piece, and fitted up entire windows with them, and with mosaicks of plain glass of different colours. In 1761, Paterion, an auctioneer, at Eslex-house in the Strand, exhibited the two first auctions of painted glass, imported in like manner from Flanders. All this manufacture confifted in rounds of scripture-stories, stained in black and yellow, or in small figures of black and white, birds and flowers in colours, and Floinfluenced by thole of a nation,

I.THE manners of a nation change by the more or less wealth both of private persons and the state.

2. By great improvements in arts and trades relative to the ease and convenience of life.

3. By the increase of certain branches of trade.

4. By a greater attachment to glory than pleasure, or by a greater attachment to pleasure than glory.

5. By opinions on the supreme

6. Sometimes this change of manners may proceed from a genius of a powerful elocution, though fanatical; fanaticks have an overbearing eloquence, and among the ignorant fanaticism spreads, as it were, by contact.

7. Long wars, either intestine or foreign, may produce these changes of manners.

8. The manners of a nation may be influenced by those of a nation, which, by success in war, has acsuired the dominion over it.

9. New manners and new usages particularly spring up from new inflitutions, for the recompence of such virtues and talents as are most aleful to society. Man naturally

feeks after distinction, and this is never more effectually obtained than in posts and employments: now if this substantial distinction be attainable without having any greater share of useful abilities or virtues than the bulk of mankind; and money will do the bufinels, by purchasing those posts and employments, (as they are all made a market of) it is not at all strange that in our kingdom [France] riches fhould be much more valued than any virtues or the most useful talents. But should some minister, the tender father of the people, warmed with a magnanimous goodness, break through the obstructions of combined incapacity and vice, and suppress among us that execrable venality of posts and employments; if, in order to fill them with worthy subjects, he should in each principal profession erect different classes vof different ages; and that they who diffinguish themselves by their abilities and virtues might be precisely known, if a commission of well-conducted enquiry and examination were ellablished, soon should we see a very great change in our opinions of what is more or less esteemable, and confequently in the nation's manners.

In the chapel at Lincoln's-tun, a

Shoredich, two windows by Bap-

window with the name of Bernard, Mam Pace, 1760.

10. Military men, about the year 1600, were more acquainted with fatigue than in 1740; besides the weight of their defensive arms,

L 4

thei

car with the fame pleafure still it was with fewer preparatives, and less daintings on a series and

ed, that the loss of a battle did not draw after it the loss of a province, if any fortified places remained, every prince fell to fortifying, that he might not be stripped of his territories all in one day, and the horse being of little use in taking towns, that corps has been retrenched, and the foot increased.

men are little inferior to what they were in 1600; that quality has been pretty well kept in use by our continual foreign wars; it may even be said, that there is now a greater emulation among the officers than in 1600, there being more posts; more commissions, more governments, and more pensions to bestow.

13. But as yet no commission is established for the proper distribution of these rewards, and the minifter regards only the recommendations of his favourites of both fexes, or the attachment of the competitors to him; worthless men are preferred over officers of unexceptionable merle, which vis a vile discouragement, vandas very wmuch damps the plated fpirit of emulation; accordingly, diffinction in the discharge of duty has little share of their thoughts; to wriggle into favon with the miniftees, their minions, the women, and even with the ministers theres is the main

bulinels, som as anomatical more and all As there aist no European court, which has such a multitude of favours to bellow, for in ours, above all others it is necessary to endeavour, by every fetch of adu-

lation and compliance, to pleafer that it may be said no courtien come up to ours for external politic ness, and courtiers living more at Paris than at Versailles, the inhabitants of Paris are seen insensibly to imbibe every part of their polite deportment.

15. But do not be mistaken, this politeness is mere outside; for those very men who embrace, who praise a courtier in favour, and protest an inviolable devotedness to him, shall, the next moment, do him an ill turn; and indeed it is only your unexperienced country gentlemen, who take a courtier's

compliments for sterling.

16. Yet must it be owned, that however light this coin of external politeness may be, it is of no small use in conversation; for of the necessity of mutually saying every day things disagreeable to one another, were we to declare our real thoughts, and the necessity of a few polite reciprocations of polite deceit, the latter is much preserable, with an allowance to the knowing of large deductions from the elem expressed by such politeness.

frange, that courtiers should be hackneyed in dissimulation and deceit, otherwise how could they live easy one with another, being always in a competition for posts, employments, governments, esteem, favours, and every one conceiting himself to have more merit than any of the other candidates? Frankness would be productive of continual brawls and quarrels.

19. The expence of furniture and the table runs much higher than threescore years ago, and from the continual improvements in the arts administering to ease and luxury, they will continue to increase. The bulk of the rich, in the want of distinguishing talents, stick at nothing to diffinguish themselves by monstrous expences; a man of wealth is very often flupid enough to let himself above the man of virtne and abilities, with a flender fortune; living in a stately palace, amidit filk and velvet, paintings, sculptures, gold and filver, and gems, he of course must be a great deal superior to a virtuous man, who has nothing of all this finery: this is the usual judgment of the vulgar, and it is furprizing, what numbers of quality are vulgar in ments, governmentaioq sint

Paris in 1698 was not properly paved, and the dirt carts not further for clearing the first not further for clearing the first not further for clearing the firsts, there

was no going abroad but on horfeback and booted, and the half boots and gilded spurs were a long time used in common visits; even they who had neither coach nor faddle horse, visited in white half boots. The first coach with glass windows, and a glass in the front, was brought from Bruffels in the year 1660, by the prince of Conde; fince which. many improvements have been made in them for ease and ornament; now these vehicles have heightened luxury and foftness, befides the unhappy effects of them on the health and vigour, as diminishing the exercise of the body; it is this diminution of exercise, and the increase of feating, which have introduced those complaints of vapours, weak nerves, vertigoes, and other kinds of indispositions fo common among the rich and indolent.

21. In the civil wars every one wore a fword, especially officers and gentry; many citizens likewife, in order to pals for officers or gentlemen, or at least for perfons above the commonalty, alfo fluck a fword by their fide, and have fince kept it as an ornament; and now in a profound peace wear it in vifits, and even at a church, which is both inconvenient and ridiculous y for where is the great difference between carrying a blunderbus to church, or a visiting, and to go to those places with a fword dangling at their heels; befides, the fword, at prefent, is become fo common, as not to be the distinction of a real gentleman; these are the remains of our civil wars: the cultum of wearing fwords may fee its period, as that of the half boots and gilded fpurs; but it would

would be proper, that the gentle- whom they must borrow is well man should be distinguished from the commoner by fame mark, as a white filk flower embroidered on particular view with which Isaosaid

22. The year 1648 was the æra of card playing at court. Cardinal Mazarin played deep, and with fineste, and easily drew in the king and queen to countenance this new entertainment, that every one who had any expediation at court, learned to play at cards. Soon after the humour changed, and games of chance came into vogue, to the ruin of many confiderable families; this was likewise very destructive to health, for befides the various violent passions it excited, whole nights were fpent at this execrable amufement; the worst of all was, that card-playing, which the court had taken from the army, foon fpread from the court into the city, and from the city pervaded the country towns Before this, there was fomething of improving converfation, every one was ambitious of qualifying himself for it, by reading of ancient and modern books; memory and reflection were much more exercised On the introduction of gaming, men likewise left of tennis, mall billiards, and other gymnastic fports, and they are become what we fee them, weaker and more fickly, more ignorant, less polished, and more dissipated.

23. The women, who till then had commanded respect, accustomed men to treat them familiarly by fpending the whole night with them sate playdivithey are often under a nepellity of borrowing eil ther to play or to pay their lot fings ; and how very ductile and complying they are to those of known.

24. This gaming is one of the greatest banes of the state; feveral trials have been made for suppresfing games of chance, but I do not know whether, to bring this about. all card-playing, all gaming, and playing of any kind, should not be totally profcribed; a continual obfervance of moderation being more difficult than at once absolutely to break with all kind of play.

25 The felling of posts has extinguished the greatest part of our emulation to acquire the talents requifite for them; as money makes a counsellor, a president, or master of requests, without regard to birth or ability, the worthless fons of financiers and merchants are preferred even to worthy noblemen, but who have not wherewith to purchase; hence two evils, the number of financiers increases, to the multiplication of usury and oppression, and the sons of wealthy merchants, instead of continuing the commerce of their fathers, which was a national advantage, are proud of invefting themfelves with the gown. Thus infamous and detrimental is the prefent path to the employments and dignities of the law.

26. This fame venom of corruption in 1650 crept into the military employments : age, experience, fervices, or tried courage, were not required in a colonel : money stood instead of every thing; the ecclefiastical employments about the houshold were likewife fold; and this bas like wife been extended to the navy and ordnance; that one day it must inevitably prove a principal cause of the nation's overthrow, unless it be our happiness

27. Every thinking person must know, that the chief way to avoid hell and obtain paradife, is to do no wrong, no hurt to husband, wife, fervants, mafters, or itranger, as displeasing to God: that the fecond way is, to procure them all the comforts and good things in our power, as acceptable to him; yet in conformity to the usages of our fore-fathers, which also owe their rise to an ancient ignorance, those two essential ways above-mentioned are neglected, and we have recourse to ways incomparably less efficacious; a multitude of ceremonies, long recitations of prayers, fastings, pilgrimages, for which neither the poor, nor the ignorant, nor our neighbours, or they whom we have wrongled or hurt, are a whit the better.

28. Tavern excesses, which had been carried very far, thank God, are much abated, by a sensible custom which has taken place among reputable people, of supping at each other's houses; to ingurgitate a pail of wine, elephant like, is no longer matter of boast; this reformation is a little owing to the sudden deaths of many fots, who, when in the slower of their age, could relish only strong liquors.

29. The infinite variety of enjoyments and diversions in Paris has lamentably corrupted our youth, that most of them, whose condition will allow of indolence, soon grow out of conceit with study and application, and throw themselves into the arms of intoxicating voluptuousness. For this we may thank the desiciency of our laws,

in not recompensing those who distinguish themselves among their equals by such labours as are useful to society; and this is the particular view with which I wrote for erecting a commission of enquiry, that when employments of the superior classes are vacant, they may be filled by the most capable of the inferior class, or that honours or pensions may be conferred on the most deserving of each class.

30. Our men of erudition for fourscore years past have busied themselves more in the curious than the useful part of sciences, and our wits have exhausted themselves only in tinsel decorations of their works, adapting them to the vitiated mode of the general tafte. We are but just beginning to fee, that to please is not sufficient, but that writers must likewise be of greater benefit to their readers than all preceding authors, modern or ancient. They have, indeed, given their cotemporaries a transitory delight, and I wish those of our times would fee, that the substance of their contest for preference and excellency does not lie in the brilliancy of wir or energy of diction, or fertility of invention, but in producing works of folid and lasting advantage to the state, not only increasing the happinels of the prefent age, but conducing likewife to that of posterity. Here our reason, as yet, is very and more dillipased weak.

On the properest objects of a travelspending innitiation as a light with

I Have frequently been amazed at the ignorance of almost all the European travellers, who have penetrated any confiderable way cast ward into Asia. They have all

been influenced either by motives of commerce or piety, and their accounts are such as might reasonably be expected from men of a very narrow or very prejudiced education, the dictates of superfision, or the result of ignorance. Is it not surprising, that of such a vaniety of adventures not one single philosopher should be found among the number; for as to the travels of Gemelli, the learned are long agreed that the whole is but an

impofurel ad or lift a

There is fearce any country, how rude or uncultivated foever, where the inhabitants are not possessed of iome peculiar fecrets, either in nature or art, which might be tranfplanted with success; thus, for inflance, in Siberian Tartary, the natives expact as ftrong fpirit from milk, which is a fecret probably unknown to the chymits of Europe. In the most savage parts of India they are possessed of the secret of dying vegetable substances scarlet, and of refining lead into a metal, which for hardness and colour, is little inferior to filver; not one of which fecrets but would in Europe make a man's fortune. The power of the Aflatics in producing winds, or bringing down rain, the Europeans are apt to west as fabulous, because they have no instances of the like nature among themselves; but they would have treated the fecrets of gunpowder, and the mariner's compass, in the same manner, had they been sold the Chinese used fuch arts before the invention was common with themselves at home. d Of all the English philosophers, I most reverence Bacon, that great and berdy penius : be it is who, undannted by the feeming difficul-

ties that oppose, prompts human

curiofity to examine every part of nature; and even exhorts man to try whether he cannot subject the tempest, the thunder, and even earthquakes, to human controul. O had a man of his daring spirit, of his genius, penetration, and learning, travelled to those countries which have been visited only by the superstitious and mercenary, what might not mankind expect! How would he enlighten the regions to which he travelled! And what a variety of knowledge and useful improvement would he not

bring back in exchange! There is probably no country fo barbarous, that would not disclose all it knew, if it received equivalent information; and I am apt to think, that a person, who was ready to give more knowledge than he received, would be welcome whereever he came. All his care in travelling should only be to suit his intellectual banquet to the people with whom he converfed: he should not attempt to teach the unlettered Tartar aftronomy, nor yet inftruct the polite Chinese in the arts of fubfistence: he should endeavour to improve the Barbarian in the fecrets of living comfortably; and the inhabitant of a more refined country in the speculative pleasures of science. How much more nobly would a philosopher, thus employed, spend his time, than by fitting at home, earnestly intent upon adding one star more to his catalogue, or one monster more to his collection; or ftill, if poffible, more triflingly fedulous in the incatenation of fleas, or the sculpture of cherry stones?

I never confider this subject, without being surprised that none of those societies, so laudably established in England for the promo-

100

tion of arts and learning, have ever thought of fending one of their members into the most eastern parts of Afia, to make what discoveries To be convinced of he was able. the utility of fuch an undertaking, let them but read the relations of It will there their own travellers. be found, that they are as often deceived themselves, as they attempt to deceive others. The merchants to deceive others. tell us perhaps the price of different commodities, the methods of baling them up, and the properest manner for an European to preserve his The mifhealth in the country. fioner, on the other hand, informs us, with what pleasure the country to which he was fent embraced Christianity, and the numbers he converted; what methods he took to keep Lent in a region where there was no fish, or the shifts he made to celebrate the rites of his religion, in places where there was neither bread nor wine: fuch accounts, with the usual appendage of marriages and funerals, inscriptions, rivers, and mountains, make up the whole of an European traveller's diary; but as to all the fecrets of which the inhabitants are possessed, thole are univerfally attributed to magic; and when the traveller can give no other account of the wondes he sees performed, he very contentedly ascribes them to the

It was an usual observation of Boyle, the English chymist, that if every artist would but discover what new observations occurred to him in the exercise of his trade, philosophy would thence gain innumerable improvements. It may be observed, with still greater sustice, that if the useful knowledge of every country, how locker barbar-

ous, was gleaned by a judicious obferver, the advantages would be inestimable. Are there not, even in Europe, many ufeful inventions, known or practifed but in one place? Their inftrument, as an example, for cutting down corn in Germany, is much more handy and expeditious, in my opinion, than the fickle used in England. The cheap and expeditious manner of making vinegar, without previous fermentation, is known only in a part of France. If such discoveries, therefore, remain still to be known at home, what funds of knowledge might not be collected in countries yet unexplored, or only passed thro' by ignorant travellers in hely caravans.

The caution with which foreigners are received in Afia, may be alledged as an objection to fuch a defign. But how readily have feveral European merchants found admission into regions the most surjections, under the character of Sanjapins, or northern pilgrims; to such not even China itself denies access.

To fend out a traveller, properly qualified for these purposes, might be an object of national concern: it would in some measure repair the breaches made by ambition and might thew that there were fill fome who boaffed a greater name than that of patriots, who professed themselves lovers of men. The only difficulty would remain in chaling a proper person for for arduous an enterprize. He thould be a man of a philofophical turn, one apt to deduce confequences of general utility from particular occurrences, neither fwoln with pride, not hardened by prejudice; neither wedded to one particular lystem, nor instructed only in one particular feience princither vitodwat oppole, prompts wholly a botanist, nor quite an antiquarian: his mind should be rinctured with miscellaneous knowledge, and his manners humanized by an intercourse with men. He should be, in some measure, an enthusiast to the design; fond of travelling, from a rapid imagination, and an instate love of change; furnished with a body capable of sustaining every fatigue, and a heart not easily terrified at danger.

Parallel between Jesus Christ and Socrates. From Mons. Rousseau's Treatise on Education, intitled Emilius.

"T Acknowledge (fays Monfieur Rouffeau, fpeaking in the character of a fceptic Savoyard vicar) at the same times that the majesty which reigns in the facred writings fills me with a folemn kind of aftonishment, and that the fanctity of the Gospel speaks in a powerful and commanding language to the feelings of my heart. Call your eye on the writings of the philosophers; behold them in all their fludied pomp, and fee how trifling, how infignificant they appear, when compared with the boly records of the Golpel? Is it possible that a book to fublime, and yet fo artlefs and simple, can be a production merely human? Is it possible that the person, whose history it unfolds, can be confidered by any as a mere man? Hear him Theak, behold his actions ! Is that the language of entheliaim? Is that the lordly tone of an ambitious ring-leader? On the contrary, what gentleness and purity in his manners! What mildnels and affecting grace in his inthe perion of

3 COMB-

structions! What elevation and die. nity in his maxims! What deep wildom in his discourses! What prefence of mind, what delicacy, what precision in his answers to the demands of the ignorant, or the objections of the perverse! What an amazing empire over his passions did his whole conduct and converfation discover! Where is the man, where is the fage, that has fo far attained the perfection of wildom and virtue as to live, act, fuffer, and die without weakness on the one hand, or oftentation on the other? That fage was Christ. When Plato drew the ideal portrait of his good man, covered with the reproach that is due to iniquity, while he deserved the immortal prize of virtue, he drew exactly the character of Jesus, The refemblance was fo far striking, that it was perceived by all the Christian fathers; and, indeed, it is not possible to mistake it. Who, but such as the tyranny of preju-dices and wilful blindness hinder from perceiving things in their true light, would dare to compare the fon of Sophroniscus with the fon of Mary? What an immense distance is there between these two characters! Socrates, expiring without pain or difgrace, acted his part, and fustained it to the end without much effort; and if that eafy death had not reflected a lustre upon his life, it would be a question whether Socrates, with all his wit and fagacity, was any thing more than a fophist. He was, fay fome, the inventor of morality: but what do fuch mean? Morality was practifed long before Socrates; and he had only the merit of faying what others had done, and of displaying in his instructions, what they exhibited in their examples.

was,

ples. Aristides had been just, before Socrates had defined what justice was, Leonidas had laid down his life for his country, before Socrates had recommended the love of our country as a moral duty. Sparta was frugal, before Socrates had praised frugality; and Greece abounded with virtuous men before he had explained the nature of virtue. But was it from the morals and example of his countrymen that lefus derived the lines of that pure and fublime morality, that was incolcated in his instructions, and mone forth in his example, and which he alone taught and practifed with an equal degree of perfection? In the midst of people, where the most furious fanaticism reigned, the most exalted wisdom raised its voice, and the grand fimplicity of the most heroic virtues cast a lustre upon the vileft and most worthless of all the The death of Socrates, nations. who breathed his last in a philosophical conversation with his friends, is the mildest death that nature or wisdom could defire; while the death of Jesus, expiring in torment, injured, inhumanly treated, mocked, turled by an affembled people, is the most horrible one that a mortal ould apprehend. Socrates, while he takes the poisoned cup, gives his bleffing to the person, who preents it to him with the tenderest marks of forrow. Jefus, in midit of his dreadful agonies, prays, by whom? for his executioners, who were foaming with rage against is person. Ah! if the life and death of Socrates carry the marks of alage, the life and death of Jesus proclaim a God. Will any one fay har the Gospel-history is all mere filion? Believe me, my friend, it not to that impostors go to work;

I fee nothing here that has the air of fiction; and the facts relating to Socrates, of which no mortal entertains the least doubt, are not so well attested as those which are recorded in the History of Christ. All your suppositions will be attended with the fame difficulty, which they only remove some steps farther off, to return again in its full force; for it is much more inconceivable and abfurd to suppose that a number of persons should have laid their heads together to compose a book, than it is to grant that the subject of it may have been taken from the real life and actions lewish writers, with of one man. all their efforts, could never have arose to that noble and elevated tone, to that pure and fublime morality that reigns in the Gospel; and the History of Jesus is cloathed with fuch characters of truth, with lines of credibility, that have something in them fo grand, fo striking, fo absolutely inimitable, that the inventor of fuch things would be still a greater object of aftonishment, than the hero of whom they are reported. After all, this same Gospel is full of things which are incredible, of things which are repugnant to reason, and which no man of fense can either conceive or admit. What then is to be done, what conduct fhall we observe amidit fuch contradictions? Let us be modest and cautions, my child let us respect in filence what we can neither reject nor comprehend, and humble ourselves before the Great Be Being, who alone, knows the as truth.

Such is the firange and uncomeda
fortable ficuation of mind, with remaind fpect to religion, into which Mr. and Roulleau, fpeaking in the person of

Builius, after having drawn such a picture of the morality of that religion, and of the divine excellence and fanctity of its author, as is impossible for a Christian to read without suding his conviction of Christ's celestial mission fortified and confirmed, and which I am fully perfunded an honest Deist cannot read without anxiety and compunction of heart.

Dr. Swift's defence of the church of England, as by law established.—
Extracted from a postbumous tract written in 1708, but lest unsinished, under the title of Remarks upon a book intitled, The Rights of the Christian Church, &c. [by Tindal.]

TT will be eafy to prove, that the opinion of imperium in imperio, in the fenfe he [Tindal] chargeth it upon the clergy of England, is what no one divine of any reputation, and very few at all, did ever mainthio: and, that their universal fentiment to this matter is fuch as few protestants did ever dispute. But if the author of the Regale, or two or three more obscure writers, have carried any points further than scripture and reason will allow (which is more than I know, or shall trouble myfelf to enquire) the clergy of England is no more answerable for those, than the laity is for all the folly and impertinence of this treatile, [The Rights, &c.] And, therefore, that people may sot be amufed, or think this man is somewhat, that he hath advanced or defended some oppressed truths, or overthrown any growing dangerous errors, I will fet in as clear a light as I can, what I concine to be held by the established clerg, and all reasonable protestant in this matter.

power i

kher."

Every body knoweth and allows that in all government there an absolute, unlimited, legislative power, which is originally in the body of the people; although b custom, conquest, usurpation, other accidents, fometimes faller into the hands of one or a few, This in England is placed in the three effates, (otherwise called the two houses of parliament) in conjunction with the king. And whatever they please to enact or to repeal in the fettled forms, whether it be ecclefiastical or civil, imme diately becometh law or nullity Their decrees may be against equity truth, reason, and religion, b they are not against law; becau law is the will of the supreme legiflature, and that is themselves. An there is no manner of doubt, but th fame authority, whenever it please eth, may abolish Christianity, and fet up the Jewish, Mahometan, of Heathen religion. In short, they may do any thing within the compa of human power. And, therefore who will dispute that the same law which deprived the church not only of lands misapplied to superstition uses, but even the tythes and glebe (the ancient and necessary support of parish priests) may take away a the reft, whenever the law-given please, and make the priesthood primitive, as this writer, or other of his stamp, can defire.

But as the supreme power car certainly do ten thousand thing more than it ought, so there are several things which some people think it may do, although it reall cannot. For it unfortunately have

pens, that edicts which cannot be executed, will not alter the nature of things. So if a king and parhament should please to enact, that a woman who hath been a month married, is virgo intacta, would that actually restore her to her primitive state? If the supreme power should resolve a corporal of dragoons to be a doctor of divinity, law, or physic, few, I believe, would trust their fouls, fortunes, or bodies to his direction; because that power is not fit to judge or teach those qualifications which are absolutely necessary to the several professions. Put the case, that walking on the flack rope were the only ulent required by act of parliament for making a man a bishop; no doubt, when a man had done his feat of activity in form, he might it in the house of lords, put on his mbes and his rochet, go down to his palace, receive and spend his tents; but it requireth very little thriftianity to believe this tumbler to be not one whit more a bishop than e was before; because the law of God hath otherwise decreed; which aw, although a nation may refuse preceive, it cannot alter in its own nature.

And here lies the mistake of this operficial man, who is not able to difinguish between what the civil power can hinder, and what it can o. "If the parliament can annul etclefiastical laws, they must be able make them, fince no greater power is required for one than the ther." This consequence he rereateth above twenty times, and ways in the wrong. He affecteth form a few words into the shape ad fize of a maxim, then trieth it his ear, and according as he likes it found or cadence, pronounceth Vot. V.

it true. Cannot I stand over a man with a great pole, and hinder him from making a watch, although I am not able to make one myself? If I have strength enough to knock a man on the head, doth it follow I can raise him to life again? The parliament may condemn all the Greek and Roman authors; can it therefore create new ones in their stead? They may make laws, indeed, and call them canon and ecclefiastical laws, and oblige all men to observe them, under pain of high treason. And so may I, who love as well as any man to have in my own family the power in the last resort, take a turnip, then tie a ftring to it, and call it a watch. and turn away all my fervants if they refuse to call it so too.

For my own part, I must confess that this opinion of the independent power of the church, or imperium in imperio, wherewith this writer raiseth such a dust, is what I never imagined to be of any consequence, never once heard disputed among divines, nor remember to have read, otherwise than as a scheme in one or two authors of middle rank, but with very little weight laid on it. And I dare believe, there is hardly one divine in ten that ever once thought of this matter. Yet to see a large swelling volume written only to encounter this doctrine, what could one think less, than that the whole body of the clergy were perpetually tiring the press and the pulpit with nothing

It will be necessary to set this matter in a clear light, by enquiring whether the clergy have any power independent of the civil, and of what nature it is

Whenever the Christian religion

was embraced by the civil power in any nation, there is no doubt but the magistrates and senates were fully instructed in the rudiments of it. Besides, the Christians were so numerous, and their worship so open before the conversion of princes, that their discipline, as well as doctrine, could not be a fecret: they faw plainly a fubordination of ecclefiaftics, bishops, priests, and deacons: that these had certain powers and employments different from the laity: that the bishops were consecrated, and set apart for that office by those of their own order: that the presbyters and deacons were differently fet apart, always by the bishops: that none but the ecclesiastics presumed to pray or preach in places fet apart for God's worship, or to adminifter the Lord's Supper: that all questions relating either to discipline or doctrine, were determined in ecclefiastical conventions. These and the like doctrines and practices, being most of them directly proved, and the rest by very fair consequences deduced from the words of our Saviour and his apostles, were certainly received as a divine law by every prince or flate which admitted the Christian religion; and, confequently, what they could not juftly alter afterwards, any more than the common laws of nature. And, therefore, although the supreme power can hinder the clergy or church from making any new canons, or executing the old; from confectating bishops, or refuse those that they do consecrate; or, in short, from performing any ecclefiastical office, as they may from eating, drinking, and fleeping; yet they cannot themselves perform those offices, which are affigned to the clergy by our Saviour and his apostles; or, if they do, it is not according to the divine inftitution, and consequently null and void. Our Saviour telleth us, "His kingdom is not of this world;" and therefore, to be fure, the world is not of his kingdom, nor can ever please him by interfering in the administration of it, fince he hath appointed ministers of his own, and hath impowered and instructed them for that purpose: so that, I believe, the clergy, who, as he [Tindal] fayeth, " are good at diftinguishing," would think it reasonable to distinguish between their power, and the liberty of exercifing this power. The former they claim immediately from Chrift, and the latter from the permission, connivance, or authority of the civil government; with which the clergy's power, according to the folution l have given, cannot possibly inter-

The church of England is no creature of the civil power, either as to its polity or doctrines. The fundamentals of both were deduced from Christ and his apostles, and the inftructions of the pureft and earliest ages, and were received fuch by those princes or states wh embraced Christianity, whateve prudential additions have been mad to the former by human laws, which alone can be justly altered or a nulled by them.

"The parliament (fays he) for pected the love of power natural churchmen." Truly, fo is the lo of pudding, and most other thin defirable in this life; and in the they are like the laity, as ip other things that are not goo And, therefore, they are held not efteem for what they are like

but for their virtues. The true way to abuse them with effect, is to tell us some fault of their's, that other men have not, or not so much as they, &c. Might not any man speak full as bad of senates, dyets, and parliaments, as he can do about councils; and as bad of princes, as

he doth of bishops?

But his arguments and definitions are yet more supportable than the groffness of historical remarks, which are scattered so plentifully in his book, that it would be tedious to numerate, or to shew the fraud and ignorance of them. I beg the mader's leave to take notice of one here just in my way: and the rather, because I defign for the fuure to let hundreds of them pass without further notice. "When (ays he) by the abolishing of the pope's power, things were brought mack to their ancient channel, the parliament's right in making ecclefastical laws revived of course." What can possibly be meant by this ncient channel? Why, the chanel that things ran in before the ope had any power in England: hat is to fay, before Austin the nonk converted England, before hich time it feems the parliament ad a right to make ecclefiastical aws. And what parliament could his be? Why, the lords spiritual d temporal, and the commons net at Westminster.

I cannot here forbear reproving he folly and pedantry of some lawen, whose opinions this poor creame blindly followeth, and renderth yet more absurd by his comtents. The knowledge of our
melitution can be only attained
of consulting the earliest English
flories, of which those gentlemen
ten utterly ignorant, further than

a quotation or an index. They would fain derive our government, as now constituted, from antiquity: and because they have seen Tacitus quoted for his majoribus omnes, and have read of the Goths military institution in their progresses and conquests, they presently dream of a Had their reading parliament. reached fo far, they might have deduced it much more fairly from Aristotle and Polybius, who both distinctly name the composition of rex, seniores, et populus; and the latter, as I remember particularly, with the highest approbation. The princes in the Saxon heptarchy did indeed call their nobles sometimes together upon weighty affairs, as most other princes of the world have done in all ages. But they made war and peace, and raised money by their own authority: they gave or mended laws by their charters, and they raifed armies by Besides, some of their tenures. those kingdoms fell in by conquest, before England was reduced under one head, and therefore could pretend to no rights but by the concesfions of the conquerors.

Further, which is more material, upon the admission of Christianity, great quantities of land were acquired by the clergy, fo that the great council of the nation was often entirely of churchmen, and ever a confiderable part. But our prefent constitution is an artificial thing, not fairly to be traced, in my opinion, beyond Henry I. Since which time it hath in every age admitted feveral alterations; and differeth now as much, even from what it was then, as almost any two species of government described by Aristo-And it would be much more reasonable to affirm, that the go-

M 2 vernment

vernment of Rome continued the fame under Justinian, as it was in the time of Scipio, because the senate and consuls still remained, although the power of both had been several hundred years transferred to the emperors.

A treatise ou Good-manners and Goodbreeding.—From Swift's Works, wol. xiv.

GOod-manners is the art of making those people easy with whom we converse.

Whoever makes the fewest perfons uneasy, is the best bred in the

company.

As the best law is founded upon reason, so are the best manners. And as some lawyers have introduced unreasonable things into common law; so likewise many teachers have introduced absurd things into common good-manners.

One principal point of this art is to fuit our behaviour to the three feveral degrees of men; our superiors, our equals, and those below

For instance, to press either of the two former to eat or drink is a breach of manners; but a tradesman or a farmer must be thus treated, or else it will be difficult to persuade them that they are welcome.

Pride, ill-nature, and want of fense, are the three great sources of ill-manners; without some one of these defects, no man will behave himself ill for want of experience; or of what, in the language of fools, is called, knowing the world.

I defy any one to assign an incident wherein reason will not direct us what we are to say or do in company, if we are not missed by pride or ill-nature.

Therefore I infift that good-fense is the principal foundation of goodmanners; but because the former is a gift which very few among mankind are possessed of, therefore all the civilized nations of the world have agreed upon fixing fome rules for common behaviour, best suited to their general customs, or fancies; as a kind of artificial good-fense to fupply the defects of reason. Without which, the gentlemanly part of dunces would be perpetually at cuffs, as they feldom fail when they happen to be drunk, or engaged in fquabbles about women or play. And, God be thanked, there hardly happeneth a duel in a year, which may not be imputed to one of those three motives. Upon which ac count I should be exceedingly form to find the legislature make any new laws against the practice of duel ing; because the methods are easy and many, for a wife man to avoid a quarrel with honour, or engage in it with innocence. And I ca discover no political evil in suffer ing bullies, sharpers, and rakes to rid the world of each other by method of their own, where the law hath not been able to find a expedient.

As the common forms of good manners were intended for regulating the conduct of those who have weak understandings; so they have been corrupted by the persons so whose use they were contrive. For these people have fallen into needless and endless way of multiplying ceremonies, which have been extremely troublesome to those who practise them, and insupportable every body else: insomuch, the wise men are often more uneasy

The impertinencies of this ceremonial behaviour are no where better feen than at those tables where ladies prefide; who value themselves upon account of their goodbreeding; where a man must reckon upon passing an hour without doing any one thing he hath a mind to, unless he will be so hardy as to break through all the fettled decorum of the family. She determineth what he loveth best, and how much he hall eat; and if the master of the house happeneth to be of the same disposition, he proceedeth in the fame tyrannical manner to prescribe in the drinking part: at the fame time you are under the necessity of answering a thousand apologies for your entertainment. And although a good deal of this humour is pretty well worn off among many people of the best fashion, yet too much of it still remaineth, especially in the country; where an honest gentleman affured me, that having been kept four days against his will at a friend's house, with all the circumstances of hiding his boots, locking up the stable, and other contrivances of the like nature, he could not remember, from the moment he came into the house, to the moment he left it, any one thing wherein his inclination was not directly contradicted; as if the whole family had entered into a combinatien to torment him.

But, besides all this, it would be tadless to recount the many foolish and ridiculous accidents I have observed among these unfortunate proselytes to ceremony. I have ken a duchess fairly knocked down

by the precipitancy of an officious coxcomb, running to fave her the trouble of opening a door. I rentember, upon 2 birth-day at court, a great lady was rendered utterly difconsolate, by a dish of sauce let fall by a page directly upon her headdress and brocade, while she gave a fudden turn to her elbow upon some point of ceremony with the person who fat next to her. Monfieur Buys, the Dutch envoy, whose politics and manners were much of a fize, brought a fon with him, about thirteen years old, to a great table at court. The boy and his father, whatever they put on their plates, they first offered round in order, to every person in the company; so that we could not get a minute's quiet during the whole dinner. At last their two plates happened to encounter, and with fo much violence, that being china, they broke in twenty pieces; and flained half the company with wet fweet-meats and cream.

There is a pedantry in manners, as in all arts and sciences; and sometimes in trades. Pedantry is properly the over-rating any kind of knowledge we pretend to. And if that kind of knowledge be a trifle in itself, the pedantry is the greater. For which reason I look upon fidlers, dancing-mafters, heralds, masters of the ceremony, &c. to be greater pedants than Lipfius, or the elder Scaliger, With these kind of pedants, the court, while I knew it, was always plentifully flocked: I mean from the gentleman-usher (at least) inclusive, downward to the gentleman-porter; who are, generally speaking, the most infignificant race of people that this island can afford, and with the smallest tincture of good-manners;

M 3 which

which is the only trade they profess. For being wholly illiterate, converfing chiefly with each other, they reduce the whole fystem of breeding within the forms and circles of their feveral offices: and as they are below the notice of ministers, they live and die in court under all revolutions, with great obsequiousness to those who are in any degree of credit or favour, and with rudeness and insolence to every body elfe. From whence I have long concluded, that good-manners are not a plant of the court growth : for if they were, those people who have understandings directly of a level for fuch acquirements, and who have ferved fuch long apprenticeships to nothing else, would certainly have picked them up. For as to the great officers who attend the prince's person or councils, or prefide in his family, they are a transient body, who have no better a title to good-manners than their neighbours, nor will probably have recourse to gentlemen-ushers for in-firuction. So that I know little to be learned at court upon this head, except in the material circumstance of dress; wherein the authority of the maids of honour must indeed be allowed to be almost equal to that of a favourite actress.

I remember a passage my lord Bolingbroke told me; that going to receive prince Eugene of Savoy at his landing, in order to conduct him immediately to the queen, the prince faid he was much concerned that he could not fee her majesty that hight; for Monsieur Hoffman (who was then by) had affured his highness, that he could not be admitted into her presence with a tiedup periwig; that his equipage was not arrived; and that he had endeavoured in vain to borrow a long one among all his valets and pages, My lord turned the matter to a jeft, and brought the prince to her majefty; for which he was highly cenfured by the whole tribe of gentle. men-ushers; among whom Monfieur Hoffman, an old dull resident of the emperor's, had picked up this material point of ceremony; and which, I believe, was the best lesson he had learned in five and twenty years refidence.

I make a difference between goodmanners and good-breeding; although, in order to vary my expression, I am sometimes forced to confound them. By the first, I only understand the art of remembering, and applying certain fettled forms of general behaviour. But good-breeding is of a much larger extent; for besides an uncommon degree of literature fufficient to qualify a gentleman for reading a play, or a political pamphlet, it taketh in a great compais of knowledge; no less than that of dancing, fighting, gaming, making the circle of Italy, riding the great horse, and speaking French; not to mention some other secondary, or subaltern accomplishments, which are more eafily acquired. So that the difference between good-breeding and good-manners lieth in this; that the former cannot be attained to by the best understandings without fludy and labour: whereas a tolerable degree of reason will instruct us in every part of good-manners with-

out other affiftance. I can think of nothing more uleful upon this subject, than to point out some particulars wherein the very effentials of good-manners are concerned, the neglect or perverting of which doth very much di-

Aurb the good commerce of the world, by introducing a traffic of a mutual uneafiness in most compa-

First, a necessary part of goodmanners is a punctual observance of time at our own dwellings, or those of others, or at third places; whether upon matters of civility, bufinels, or diversion: which rule, though it be a plain dictate of common reason, yet the greatest * minister I ever knew, was the greatest trespasser against it, by which all his business doubled upon him, and placed him in a continual arrear. Upon which I often used to rally him as deficient in point of goodmanners. I have known more than one ambassador, and secretary of flate, with a very moderate portion of intellectuals, execute their offices with great fuccess and applause, by the mere force of exactness and regularity. If you duly observe time for the service of another, it doubles the obligation; if upon your own account, it would be manifest folly, as well as ingratitude, to neglect it; if both are concerned, to make your equal or inferior attend on you to his own disadvantage, is pride and injustice.

Ignorance of forms cannot properly be stiled ill-manners; because forms are subject to frequent changes; and confequently being not founded upon reason, are beneath a wife man's regard. Besides, they vary in every country; and after a fhort period of time very frequently in the same: so that a man, who travelleth, must needs be at first a stranger to them in every court through which he paffeth; and, perhaps, at his return as much a stranger in his own; and, after all, they are easier to be remembered or forgotten than faces or names.

Indeed, among the many impertinencies that superficial young men bring with them from abroad, this bigotry of forms is one of the principal and more predominant than the rest; who look upon them not only as if they were matters capable of admitting of choice, but even as points of importance; , and therefore are zealous upon all occasions to introduce and propagate the new forms and fashions they have brought back with them: fo that, usually speaking, the worst bred person in the company, is a young traveller just arrived from abroad.

On the use of Fables for instructing children. - From Monfieur Rouf-Jeau's Treatife on Education, entitled Emilius. 10

EMILIUS shall never be set to learn any thing by heart, not even the fables of Fontaine, simple and beautiful as they are; for the words of a fable are no more the fable itself, than these of a history are the history. How is it possible men can be so blind as to call fables the moral lectures for children, without reflecting that apologue, in amufing, only deceives them; and that, seduced by the charms of falsehood, the truth couched underneath it escapes their notice? Yet so it is; and the means which are thus taken to render instruction agreeable, prevents their profiting by it. Fable may instruct grown per-

Robert Harley, earl of Oxford, lord high treasurer to Q. Anne.

fons, but the naked truth should ever be presented to children: for if we once spread over it a veil, they will not take the trouble to draw it aside in order to look at it.

Children universally read the sables of Fontaine, and yet there is not one who understands them. It would be still worse, however, if they did understand them; for the moral is so complicated and disproportionate to their capacities, that it would rather induce them to vice than virtue. Here, again, you will say, I am at my paradoxes; be it so; let us see whether what I assirm be not true.

I advance, that a child does not comprehend the fables which he gets by rote; because, whatever pains we take to render them fimple, the instruction we would deduce from them is attended with other ideas above his capacity; and because that even the poetic turn given them, in order to make them the more eafily remembered, makes them, at the same time, the less eafily comprehended; fo that they are rendered entertaining at the expence of perspicuity. Not to mention many of these fables, that are totally unintelligible and useless to children, and which nevertheless are indifcreetly taught them, because they are found mixed with the rest, we shall confine ourselves to those which the author appears to have written expresly for children.

In the whole collection of Fontaine's fables, I know of but five or fix that are eminently diffinguished for puerile simplicity: of these I shall, by way of example, take the first; the moral of which is the most adapted to children, being that which they understand best, and learn with the greatest plear fore; it is that also which the author has, for this reason, placed at the beginning of his book. On the supposition that the objects of this sable are intelligible to children, and capable of affording them instruction and amusement, it is doubtless his master-piece; I will take the freedom therefore to give it a short examination.

Le Corbeau et le Renard.
The Raven and the Fox.
Maitre Corbeau, sur un arbre
perché.

Master Raven, on a tree perched, Master! What is the signification of the word Master itself? What is the use of it before a proper name? and what is the particular meaning of it on this occasion?

We must next tell the child, what is a raven. But what is, fur un arbre perché? We do not say, on a tree perched, but, perched on a tree. We must, therefore, talk to him of the transposition of words by poetical licence, and instruct him in the difference between verse and prose.

Tenoit dans son bee un fromage. Held in his beak a cheese.

What kind of a cheese? Was it a Swiss, or a Dutch cheese? If a child has never seen ravens, what can you get by talking to him about them? and if he has seen them, how will he conceive they could hold whole cheeses in their beaks? Let our descriptions be ever agreeable to nature.

Maitre Renard, par l'odeur al-

Master Fox, by the smell allured.

Master again! But this may be thought a good title for a fox, who may be supposed to have taken up his degrees in the arts of his profession. We must, however, describe

the nat between that wh léché is only in formed why we in prof make t Allured cheese, a tree, fmell to in a th row. I take to pupil; himself

discern relation Lui Hel

This then? a languag gacious before of your fequence gine.

Mr. child he fore he fpect. this par will have explain

Que Hoy

the par

Wret dant!

the nature of the fox, and diftinguish between his natural character and that which is given him in fable. Alliché is an obsolete word, and used only in verse: a child, being informed of this, will naturally afk, why we talk otherwise in verse than in profe? What answer will you make to fuch a question? Again, Allured by the smell of a cheese! This cheese, held by a raven perched on a tree, must furely have a strong fmell to be fcented by a fox lurking in a thicket, or earthed in a burrow. Is this the method you would take to exercise the genius of your pupil; to teach him not to fuffer himself to be imposed on, and to discern truth from falshood in the relations of others?

Lui tint à-peu près ce langage. Held with him nearly this difcourse.

This discourse! Do foxes talk then? and do they speak the same language as ravens? Take care, sagatious preceptor; consider well before you reply to these questions of your pupil. It is of more consequence, perhaps, than you imagine.

Eb! bon jour, Monsieur le Corbeau!

Ha! good morrow, Mr. Raven! Mr. So, Mr. is a title which the child hears turned into ridicule before he knows it is a mark of respect. Again, those who may read this passage, Monsseur du Corbeau, will have enough to do, before they explain to a child the meaning of the particle du.

Que vous étes charmant! que vous me semblez beau!

How charming you are! how beautiful you seem to me! Wretchedly expletive and redunsant! a child, hearing the same thing repeated in different words, will hence learn a loose and inaccurate method of speaking. If you say this redundancy is a piece of art in the writer, and agreeable to the design of the fox, who would seem to multiply his praises by making use of different terms, this excuse is sufficient with me; but is a very bad one to be given to my pupil.

Sans mentir, si votre ramage.
Without lying, if your singing.
Without lying! So, then it is
usual to lye sometimes! But what
would your pupil think, if you
were to tell him the fox says this
only because he is actually telling

Repondoit à votre plumage.

the raven a lye?

Be answerable to your feathers.

Answerable! What can that word mean? Endeavour to teach a child to compare two qualities so different as the plumage and the singing of a bird; and see how well he will understand you.

Vous seriez le phenix des hôtes de ces bois.

You are a phoenix among the lords of these woods.

A phænix! what is a phænix? Behold us already entering upon the fictions of the ancient mythology. The lords of the woods! How figurative! The flatterer raises his language, and gives it more dignity, in order to render it the more seductive. How is a child to understand this finesse? Does he know, is it possible that he should know, the difference between an elevated and a mean stile?

A ces mots, le corbeau ne se sent pas de joie.

At these words the raven is out of his wits with delight.

A child must have already experienced

ANNUAL REGISTER

rienced very lively and strong pasfions, to be able to comprehend this proverbial expression.

Et pour montrer sa belle voix.

And to display his fine finging. It must not be forgotten, that, in order to understand this verse and the whole fable, a child ought to be previously made acquainted with the fine finging of a raven.

Il ouvre un large bec, laisse tomber sa proie.

He opens his large beak, and

lets fall his prey.

Il ouvre, &c. This verse is admirable; the found and the fense go incomparably well together. Methinks I fee his wide beak open, and hear the cheese rattle down the boughs: but this kind of beauty is loft on children.

> Le renard s'en saifit; et dit, mon bon Monfieur.

> The fox fnapt it up; and then faid, my good Sir.

Good Sir! See already goodness made fynonymous to folly: is it not indeed mere loss of time thus to in-Aruct children?

> Apprenez que tout flateur Learn that every flatterer.

A general maxim! children know nothing of general maxims.

Vit aux depens de celui qui l'écoute. Lives at the cost of those who liften to him.

No child of ten years of age can understand the meaning of this line.

Cette leçon vaut bien un fromage, fans doute.

This lesson is worth a cheese, without doubt.

This line is intelligible, and the thought is good. There are, nevertheless, but few children who are capable of comparing a moral leffon to a cheefe; and fewer who would not prefer the cheese to the lesson. They must be taught, therefore, to look upon this as a piece of raillery. What a deal of fubtilty is here required of children!

Le corbeau, bonteux & confus. The raven, ashamed and confused, Another pleonasm; but this is inexcusable.

> Jura, mais un peu tard, qu'on ne ly prendroit plus.

> Swore, tho' fomewhat too late, he would never be fo deceived again.

Swore! Where is the preceptor weak enough to explain to a child

the nature of an oath?

You may think, perhaps, I have been here too circumstantial: I have been much less so, however, than would have been necessary to analyse all the complex ideas of that fable, and to resolve them into the fimple and elementary ones of which they are composed. But who thinks fuch analysis necessary to make ourfelves understood? We are none of us philosophers enough to put ourfelves in the place of children. But to proceed to the moral of the fable.

I would alk, if there are any children of fix years of age, whom it would be proper to teach, that mankind flatter and deceive each other through motives of felf-interest? One might teach them, indeed, that there are fatirifts who laugh at little boys, and privately ridicule their childish vanity: but the cheefe spoils all; and they learn less to prevent its falling from their own mouths, than how to make it fall from the mouths of others. This is another paradox, and not the least important.

Trace the progress of children in learning fables, and you will find, that, when they are in a capacity to make

make any application of them, they almost always do it in a manner contrary to the intention of the fabulift; and that, instead of remarking the error or fault you are defirous of guarding them against, they fall in love with the vice of the party exposed. In reading the fable above cited, for instance, children laugh at and despise the filly raven; but they are fond of the fox.

In the next fable of the same collection, you think also to fet them an example in the grashopper; you are mistaken: they prefer that of the ant. None are fond of humiliation; all chuse to act the shining part: it is the choice of felf-love; it is in every respect natural. But what a shocking lesson is this fable for children? A covetous child would be the most detestable of all monsters: at least, such it would be, when sensible of what was asked of it, and what it refused. The ant in the fable does more than this; he not only refuses to affift the suppliant in diffress, but aggravates that refusal with raillery and reproach.

In all fables where a lion is introduced, as it is generally the most thining character, a child never fails to take upon himself the part of the lion; and when he prefides at any diffribution, he generally prohts by his model, and sweeps all to his own share. But when the gnat fings the lion to the quick, it is another affair: the child is then no longer the lion, but the gnat; and learns thence in what manner he may some time or other kill those with the prick of a pin, whom he durst not attack openly.

in the fable of the lean wolf and the fat dog, instead of deducing from it the leffon of moderation

defigned, he is encouraged to licentiousness. I shall never forget the circumstance of once seeing a little girl, quite distressed by being teized with this fable, in order to make her docile and tractable. It was some time before the cause of her tears came to be known; which, however, was at length discovered: the poor child was heartily tired of her chain; she felt her neck galled, and was very forry the was not in

the condition of the wolf.

Thus the moral of the first fable is, to a child, a lesson of the most servile flattery; that of the second, a lesson of inhumanity; that of the third, of injustice; that of the fourth, of fatire; and that of the fifth, of independence. This last lesson is superfluous to my pupil, and not more expedient for yours; for when the precepts you inftil are contradictory to each other, what good can you expect from them? But; perhaps, this defect in the moral of fables, which makes me object to them, may furnish a reason for your preserving their use. In the world, there is one kind of morality in discourse, and another in actions; both which never agree together. The first is to be found in the catechism, where we shall leave it; the other we meet with in Fontaine; in his fables, as to what regards children; and in his tales, as to what The fame relates to their mamas. author suffices for both.

But I am willing to compromise this matter with La Fontaine. promise you, for my own part, my dear author, to read, and admire your fables, because I am not afraid of being mistaken in their design. But, as for my pupil, you must excuse me, if I do not suffer him to read a line in your book, till you

have convinced me that it is proper for him to get words by rote, of which he does not understand one fourth part; that the meaning which he may annex to some, cannot be false; and that, instead of profiting by the example of the dupe, he may not form himself on that of the knave.

Extract from the Case of Authors by Profession or Trade. By the late James Ralph, Esq;

ways at war, and always treated one another with reciprocal contempt. Perhaps for this only reafon, That the man of money could acquire every thing but ideas; and the man of wit's ideas could never acquire him money. But whatever the cause may be, such is the sact: and, as if the bulk of mankind derived some kind of gratification from the quarrel, they have each in his way contributed all they could to render it perpetual.

Thus a man may plead for money, prescribe or quack for money, preach and pray for money, marry for money, fight for money, do any thing within the law for money, provided the expedient answers, without any the least imputation.

But if he writes like one inspired from heaven, and writes for money, the man of Touch, in the right of Midas, his great ancestor, enters his caveat against him as a man of tasle; declares the two provinces to be incompatible; that he who aims at praise ought to be starved; and that there ought to be so much draw-back upon character for every acquisition in coin.

And yet the art of writing is as

much an art as the art of painting, or the art of war. The pen, as a tool, is of as much importance, at least, as the pencil; and as a weapon, offensive or defensive, has its power, and can do some fort of execution as well as a sword.

We call the sciences liberal, its true; but then, its as true, there is not one liberal amongst them: all are carried to market: and some not only setch a very good price in ready money, but are farther rewarded with titles, dignities, employments, and revenues.

And the thing speaks for itself: a poetical canto; a demonstration worthy of Euclid; __ an historical fection—a tract on government—a discourse on morals—a persuasive to holiness, &c. till converted into money, will not furnish any one accommodation: and in a country of riches and luxury like this, where both pleasure and importance are measured by expence, money enough must be had to furnish vanities as well as necessaries. The more we abound in vanities, the more confiderable we are esteemed: and where any necessary is wanting, apparently thro' necessity, all the douceurs of life arifing from observance and respect, will be wanting too.

If, for illustration, we had a Shakespeare, a Milton, or a Newton now existing amongst us, who should come into what is called good company in dirty linen, for want of clean—And a Charters, a Lascels, a Lowther, a Walters, or a Crastein, out of fordidness did the same, merely to save the charge of washing, the latter would be courted and caressed, and the former would hardly be acknowledged.—The most notorious abuse of wealth not being able to render the abuser

Even the poor lord, poor hero; poor faint, amongst us (if we had any of the two latter classes amongst us) could no more preserve themfelves from contempt, than the poor poet, historian, philosopher, or di-

And this we ought in charity to suppose is the cause, that neither God or the King is ever ferved in employments the most honourable and venerable, even by persons of the first families, and most unblemished fanctity, for naught.

Politically speaking, however, I am of opinion, that wealth should be intitled to some degree of respect; and, on the contrary, that want should be subject to some degree of disgrace. The reason this: wealth is the object of commerce; commerce is one great fource of our national efficiency; and when political and philosophical maxims clash, prudence requires the latter should give way to the former.

But then wealth may be valued too high, as it is faid, gold may be bought too dear. Or, if there is no fuch worth, indeed, as moneys worth, we should be confistent in our decisions at least; in which case it would follow, that, instead of censuring an author for taking money for his works, we ought to esteem those most who get most money by them. And then Pope, and Voltaire after his example, would deserve to be confidered more for what they made of their works, than for the works themselves.

The writer has three provinces-To write for booksellers. To write for the stage. To write for a faction in the name of the commu-

nity.

To write for a faction in the name of the community is the most flattering of all these provinces, because the writer who fills it, is expected to do that without doors, which his confederates in a fuperior station find impracticable to do within; because he finds himself confulted and careffed by them on this account; and because of the affurances given him, that in the division of the promised land, a lot shall be reserved for him.

While, therefore, these occasional connections hold, while he is useful in collecting the materials of oppofition, and in working up the whole mass to a head, hope sweetens all his labours, all his difficulties, all his discouragements, and he at least enjoys the dream of growing ferviceable to himself and his country

together.

At last, the time of projection The country is brought to groan for a change. The strongest faction in the c-t takes advantage of the cry, to displace the weaker, and to grow themselves stronger by slipping in a fure man or two of their own. All-sufficient patriots become infignificant ministers. Opposition is at an end. The pen is no longer of any use; and he that held it is left, in the language of Shakespeare, Like an unregarded bulrusb on the stream to rot itself with motion.

Poor * Amhurst! after having

Mr. M ----, his fellow labourer in another excellent paper called Common Sinfe, by marrying a woman of fortune, was put into a condition of laughing at the ingratitude he also experienced on the same occasion,

been the drudge of his party for the best part of twenty years together, was as much forgot in the famous compromise of 1742, as if he had never been born! And when he died, of what is called a broken heart, which happened within a few months afterwards, became indebted to the charity of his very bookseller for a grave. A grave not to be traced now, because then no otherwise to be distinguished than by the freshness of the turs, borrowed from the next common to cover it!

There is no need for me to infer. Every confiderate reader, as well as every author, will do it for me.

I do not, however, defire to carry this accusation one step higher than it ought to go: nor am I at all pleased with the opportunity thrown in my way of making any such accusation at all.

There have been times, when the talents of a good writer were efteemed a fufficient qualification for almost any employment whatsoever, and when room was left or made for their admission.

I do not rank Burnet in the first class of authors, and yet it was not his divinity which made him bishop

of Salisbury.

Somers, it is true, was lawyer, erator, and flatesman; and yet he was more obliged to his pen than his pleadings (with an exception to that on the abdication) for those distinctions, which gradually led him to the highest in the power of the crown to bestow on him.

Mr. Locke had tried his hand in the service of the Excluders for the sake of mankind, if not for his own; and though it must be allowed he was more a philosopher than a politician, it was not in the former of those capacities that he was honoured with a seat at the Board of Trade.

Davenant was not eminent in his own walk of civil law, at least as a pleader; nor was he ever promoted in it: and yet, in acknowledgment of his powers as a political writer, we find the place of inspector-general of the customs created purposely for his gratification; because the establishment, it seems, was, even in those days, so full, that no room could be made for him elsewhere.

Prior not only found friends to applaud his abilities, but also to reward them: Sunderland was the Erle Robert he addressed his Mice to; so that we are not to wonder, that he had a feat in parliament (there was then no qualificationact.)—that he was fecretary to the embaffy at Ryswick, and to that of lord Jersey in France; that, even when lord Manchester was ambasfador-resident there, in the room of lord Jersey, he was sent thither with a special commission, independent on him; and that he was a lord of trade, long before he was minister - plenipotentiary Great Britain to Lewis XIV.

Swift had a natural claim to all that Sir William Temple could do for him; had been personally known to King William; and was introduced to lord Godolphin by the elder Craggs, as a man worth any price or preferment, without deriving any material advantage from his surpassing genius: but having commenced advocate for lord Oxford, was rewarded with the deanery of St. Patrick's; and the times taking a new turn soon after, he preferred the free exercise of his

Addison and his advancement hardly need be mentioned, the inflance is so notorious; but every body may not so readily recollect, that his party-services contributed more to it than all his laudable efforts to refine our manners, and perfect our taste.

Nor was Steel, his subordinate, absolutely forgot: as his share in the play-house patent serves to bear witness: and I believe, were we to inspect the records of the treasury, we should find proofs of his being farther considered in a

more filent way.

Even the great Walpole himself, like the great Montagu, lord Hallifax, whom he succeeded, did not disdain to make his approaches to power by writing as well as speaking; and several of his pieces are still extant in the collections of perfors curious in these matters.

And I will not specify the many, many dignified names, in all capacities, of persons now living, who have either obtained those dignities, or added signal emoluments to them, by the exercise of the pen; for sear of shocking that delicacy which renders them content with the fruits of their former labours, and desirous the labours themselves should be forgot.

But Thomas Gordon is dead—And with his, as the + last of the lucky names on this roll, worth remembering, I shall close my list.

Gordon then, I have reason to think, was not much richer, better recommended, or better ally'd, when fortune first led him from Scotland to London, than many of his cotemporaries: and what degree of consideration he obtained from the public, till he had Trenchard and Collins for his supporters, is hardly worth ascertaining-But from that happy period all went well with him: the parts and learning of the whole junto were placed to his account-As reputed author of the Independent Whig, a fortune not inconfiderable was left him, by a country phyfician; being the only retribution of the kind, perhaps, that ever any British author met with! - From Cato's Letters, London Journals, Anti-South-Sea pamphlets, he derived the character of a writing politician. And what completed his importance, Trenchard dying, was not, fashionably, ashamed to own him in his will, but left him his books, together with a handfome legacy; on which recommendation, Sir Robert Walpole not only took him and his Tacitus at once into his protection, but also found means to put him on the establishment as a commissioner of the winelicences; in the possession of which place he dy'd.

Did all merit center in or die with Gordon? It cannot be affirmed, or even supposed. Arnal, once his friend, though afterwards his enemy, was acknowledged to have quicker parts, and a more pliant pen.—And yet, tho' prodigally rewarded for critical services, he could never obtain a stated provision.—So that, had he lived a few years longer, he might have lived

[†] Mr. Wood, so much to his honour distinguished by Mr. secretary Pitt, is a writer by accident, not by profession; and was already secured against any reverse of fortune, by the gratitude and generosity of former friends.

himself

himself into all the wretchedness, which Amhurst, his antagonist,

funk under. What is stranger still, he had not only the minister but the M-ch too for his patron; who condefcended, more than once, to express a gracious fense of his merits and fervices, and some impatience, to have him fuitably and permanently rewarded. So that we are bound to believe, that neither M-ch nor minister, tho? seemingly all-fufficient, had any longer power, separately or conjunctively, to do what they wished to do for him .-The heat of opposition had, by this time, not only increased the price of fervice, but fo enlarged the number of claimants, that all was too little to fatisfy their cravings and demands .- Hinc illa Lacbrymæ.-

" Authors at large (fays lord Shaftesbury) are in a manner professed masters of understanding to the age." And in Churchill's Collection of Voyages, an Italian traveller, one Gemelli, gives all Europe to understand, that he could find nothing amongst us but our writings, to diftinguish us from the worst of Barbarians. Instead of reproaching authors, therefore, for living by their labours, we ought reproach ourselves for allowing them no other means to live.

By the flatute of modern uniformity, luxury is the idol that all worship—there is a luxury of the mind as well as the senses .- Of those who administer to the latter, authors stand the foremost-And ought we to reproach them for the

exercise of those talents which we are so much obliged to, for enlarg: ing the bounds of our happines?

The times, as we have feen were favourable to Prior, Addison. &c. (though all found occasion to complain before they were ferved) because the link of patronage which held the great and the learned to. gether was then in full force : and yet they did not commence writers in virtue of any such forefight, but because it was the impulse of their genius; and all the good that befel them upon it, was as much the gift of fortune as the refult of merit.

The next race of writers had their recent examples for authority; and, so far, could better justify themfelves for taking to the pen and the press, on a principle of discretion, than, in this country, any other fet of writers ever could.

We of the present day, indeed, having nothing but phantoms before our eyes, are only the dupes of our own delusions .- But then alas! we are writers; confequently incapable of taking up any other trade; and consequently, instead of examples, can only bequeath our advices and warnings to others.

And, if advice had any power to convince, or warnings to deter, the glut of writing which has cloyed the present age, should be followed, like Pharaoh's years of abundance, with a dearth as durable.

Were only the Journals, Chronicles, Magazines, and other periodical, as well as occasional productions (which, at present, contribute so much to the amusement and

Let those that now write, therefore, be the last! And those that delight in darkness have it!

A letter concerning the marquis Belloni's dissertation upon commerce. From the Journal Œconomique.

N your journal for March, 1751, you have inferted a differtation upon trade, by the marquis Belloni, which I have read feveral times, as an excellent piece; the substance of all the best remarks which have been made by our modern politicians on that subject, containing advice to lovereigns touching the direction of commerce, manufactures and the tirculation of money. But ought not he first to have confidered whether it is more necessary to direct all those things with fo much care and contern as he proposes, or to let them take their own way, under proper protection only? How many general and particular manufactures have been established and brought to perfection by liberty alone, each havingbeen carried on in its own right! Every individual will be led by hohour and advantage, and thence refalts a great whole, which will never be the consequence of a general direction. If, on the contrary, the VOL. V.

government should be too watchful and follicitous, and laws too much extended or too minute, should happen to disturb particular manufacturers, in terrifying by penalties often injudiciously inflicted, or recompensing by prizes ill adjudged, you substitute intrigue instead of emulation. How many things are now carried on with tolerable fuccess, merely from having hitherto escaped a pretended legislative Police, which inflead of advancing, retards the progress of industry and improve-Observe how trade flourished in the republics, until its prosperity was interrupted either by time, or other political causes foreign to commerce, such as wars, national debts, and oppression; the reason was, those republics have a spirit ever healthy, ever active, which is liberty; and this, far from diminishing, actually constitutes public strength; it represses evil and maintains distributive justice, and the evil being repressed, the good appears and predominates: yes, the removal of obstacles is all that is necessary to the success of trade. It asks nothing of the public, but good judges, the discouragement of monopoly, an equal protection to all the fubjects, an invariable value of coin, roads and canals: belides thele articles all other cares are vicious : and this vice is the more pernicious to a flate, as it flows from an ill-conducted zeal: this zeal has partizans, officers in employment and authority, and it requires whole ages to undeceive them of their errors.

Trade is the science of individuals; but the general direction of trade cannot be a science; for it is Oftentimes, when we impossible.

N

dive

dive into sciences beyond our reach, fuch as the general fystem of the universe, infinitude, the union of spirit and matter, &c. we are quit for fo much loss of time; but in policy, fuch false presumptions carry us a great way in the fatal paths of ruin and destruction. ought to be persuaded that, in order to attain to that knowledge which is requifite for the direction of commerce, it is not enough to know the different interests of different nations, provinces and focieties; but we must also understand the interests and connexions of individuals, together with the quality and value of each commodity. He therefore, who is mistaken in the least article, will direct amis, and enact pre-Who then shall posterous laws. pretend to this integral and univerfal capacity? Non datur scientia. Nevertheless the directors of trade arrogate this to themselves; and if this arrogance be faulty, and they confult their caprices more than their understanding, the result will be, laws that cramp commerce, and favours unjustly conferred. Sometimes the council of commerce of a nation or province, fees the common interest only through the eyes of their deputies; these sometimes propose private or particular advantages to their own towns or persons, to the prejudice of other towns and the rest of their subjects; and fometimes it is to be feared, they lay it down as a maxim to aggrandize what is great, annihilate what is little, and utterly banish equality, It is reported of Mr. Colbert, that when he convened feveral deputies of commerce at his house, and asked what he could do for the benefit of trade? the most

fenfible and plainest spoken man among them, replied in these three words. " Let us alone." Have we ever sufficiently reflected upon the good fense of that short answer? This is no other than a kind of commentary upon it. Apply it to every thing that is done for trade, and to what chiefly destroys it in monarchies; and examine its effects: you will foon find how little fruit and fuccess is reaped from all those cares of restraint, inspection and regulation; the republics have made greater advances in trade, almost without laws and constraint, than other countries when countenanced by the ablest ministers; the instinct of the bee does more in this particular, than the genius of the greatest politician: the capital of a republican state increases every day, by economy, agriculture, industry, brokerage, manufacture, and every thing that is understood by the idea of trade. There are degrees by which we ascend successively from what is simple to what is improved, and from this last to the perfection of art; these the multitude will climb of themselves, by communication, example and emulation: they never fail to follow the different steps, and never mistake when left to their own conduct; but when people pretend to shew them the road and direct them, woe be to him who mistakes! The needful is neglected, in order to proceed to what is superfluous before the time. Without mentioning particular nations, how many errors of this kind have been committed to the destruction of mankind! How many colonies have been peopled at the expence of the continent! While fome places enjoyed abundance, how

The marquis Belloni thinks it might be of service to trade, to set custom-houses, and load one kind commodity with higher duties han another; to exclude foreign merchandize, and favour our own yencouraging the exportation of em. This practice is but too well mown in Europe; but the nation no introduced it first, hath necesarily prescribed the example to thers; each is willing to do the me injury to the right of nations hich itself suffers: foreign manuactures were prohibited that one ountry might not become tributary pits neighbours; so that the Euopeans, as they increased in the nowledge of trade, took measures breaking all communication among themselves, and in time of mosound peace suffer all the effects fan universal war. No, it is not good of trade that advises these easures, but some private interest hich too often gets the better of blic advantage. If once the ultitude is allowed to take their m way, it will foon undeceive the old in this particular, to the great trantage of fociety, and shew that passage of merchandize from thate to another ought to be free as that of the air and Mer. All Europe ought to be other than a general and comfair; the person or nation hich should make the best commo-

dity should find the greatest advan-The distance and expence tage. of carriage are sufficient reasons for any nation to prefer its own goods to those of others; and where these obstacles cease, the stranger is preferable to our own countryman. otherwise you ruin instead of favouring subjects in their trade. The custom-house duties will always have a bad effect, for the finances of the nation ought to be raifed from the confumption only; as all duties levied upon the transportation, be they what they will, never fail to distress trade. But presumption and felf-love are fo predominant among men, that they prefer a small advantage acquired by sophistry, subtility or malice, to all that nature and humanity would afford with much more abundance and integrity; though their understanding was undoubtedly given them not to domineer but to regulate liberty. Yes, a regulated and enlighted liberty will always do more for the trade of any people, than the most intelligent dominion: a fingle man fees more clearly into the interests of his own trade, and conducts it better than ten affociates, whose interests are always divided and often opposed to each other. If he goes too far, if he usurps over or injures his neighbours, they can flop and restrain him with the affistance of justice; and this constitutes the equality, policy and ballance that are necessary to trade: whereas our legislators can only perceive so many different interests in a confused manner. Liberty will enrich the merchants, and these becoming more or less wealthy, according to their talents, will endeavour to bring their manufacto-N 2 ries

ries to perfection. The regulations made for manufactories ought to be as fo many instructions to those who are in fearch of this perfection, in the same manner as the books that treat of arts and sciences. There must be all forts of degrees of goodness in the manufactories, according to the taste and circumstances of the purchasers : imperfection and fraud discredit manufacturers, while diligence and honefty enrich and bring them into For these reasons commerce claims liberty instead of those penal laws, duties and interdictions by which it is discouraged.

Trade itself is no other than an abstract idea lately known, as well

as circulation and credit. feem to make new divinities, like the Greeks, in order to adore them: our fathers, who had less idolatry and philosophy, but more wisdom, were richer by their æconomy and labour, than we by our sciences of exchange, brokerage, and flockjobbing. Perhaps our posterity, undeceived by experience, will laugh at the disease that now prevails in feveral nations, of endeavouring to reduce the principles of trade into a fystem: and will place it in that rank which we now affign to the Crusades, and which we shall soon give to the folly of the political ballance of power in Europe.

R

POETRY.

The Horse and the OLIVE, or WAR and PEACE.

By the late Archdeacon PARNELL.

Not yet printed in his works.

WITH moral tale let ancient wisdom move,
Which thus I fing to make the moderns wise;
Strong Neptune once with sage Minerva strove,
And rising Athens was the victor's prize.

By Neptune, Plutus, (guardian pow'r of gain)
By great Minerva, bright Apollo stood:
But Jove superior bade the side obtain,
Which best contriv'd to do the nation good.

Then Neptune striking, from the parted ground The warlike horse came pawing on the plain, And as it tos'd its mane, and pranc'd around, By this, he cries, I'll make the people reign.

The goddess, smiling, gently bow'd the spear,
And rather thus they shall be bless'd, she said:
Then, upwards shooting in the vernal air,
With loaded boughs the fruitful olive spread.

Jove saw what gift the rival pow'rs design'd,
And took th' impartial scales, resolv'd to show,
If greater bliss in warlike pomp we find,
Or in the calm which peaceful times bestow.

On Neptune's part he plac'd victorious days,
Gay trophies won, and fame extending wide;
But plenty, fafety, fcience, arts, and eafe,
Minerva's fcale with greater weight supply'd.

Fierce war devours whom gentle peace wou'd fave;
Sweet peace restores what angry war destroys;
War made for peace, with that rewards the brave,
While peace its pleasures from itself enjoys.

Hence vanquish'd Neptune to the sea withdrew,
Hence wise Minerva rul'd Athenian lands;
Her Athens hence in arts and honours grew,
And still her Olives deck pacific hands.

N 3

From

From fables thus disclos'd, a monarch's mind
May form just rules to chuse the truly great,
And subjects, weary'd with distresses, find
Whose kind endeavours most befriend the state.

E'en Britain here may learn to place her love, If cities won her kingdom's wealth have cost. If Anna's thoughts the patriot souls approve,

Whose cares restore that wealth the wars had lost. But if we ask, the moral to disclose,

Whom best Europa's patroness it calls, Great Anna's title no exception knows, And unapply'd in this the fable falls.

With her no Neptune or Minerva vies:

Whene'er she pleas'd, her troops to conquest slew:
Whene'er she pleases peaceful times arise:

She gave the horse, and gives the olive too.

O D.E. sur la Présente GUERRE.

Extracted from a German periodical work of M. Professor Gottsched of Leipsick, of whose company the king of Prussia was so fond, and attributed by that gentleman to one of the most eminent writers of French poetry, who, the professor says, will be readily guessed without his naming him.

J'ENTENS de toutes parts éclater les Orages, Les champs sont inondès de cent mille assassins, Payés pour le massacre, instruits pour les ravages.

La foudere est dans leurs mains.
Par tout le fer poursuit, par tout le feu dévore;
Ils laissant à leur suite en ces champs malheureux,
La faim, le désespoir, plus terribles encore

Que le fer & les feux.
Les Guerriers, dont la course imite les tempêtes,
Obéissent aux Lois, aux Princes, aux Vertus;
Les lauriers immortels, dont ils parent leurs têtes

Sans doute leur fons dus.
C'est vous que j'interroge, Idoles de la Terre,
Vainqueurs des Nations, ou plutôt leurs bourreaux,
Tyrans ambitieux, qui d'une injuste Guerre

Allumez les flambeaux.

Neron ofa brûler des masures antiques,

Rome l'appelle monstre, en tombant sous ses coups,

Et vous du Monde en seu, destructeurs frenétiques,

Quel nom méritez vous?

Voyez ces habitans dans l'horreur des allarmes, En cent lieux fugitifs, errans, exterminés, Quel laurier peut payer la douleur & les larmes

De tant d'infortunés! Si vous êtés pressés de ce desir funeste, De depeupler la Terre, en proie à vos transports, Ah! semez les poisons, faites germer la peste,

Et règnez sur des morts D'une goutte de sang vous redemandez compte Vos Loiz aux meutriers prodiguent des tourments Assassins de l'Europe, & vous n'avez pas honte

D'en verser des torrens!

Ah! qui donc êtes vous? quelle sut l'origine,

Des droits que vos égaux vous ont abandonnés!

Nés de la même fange, est ce pour leur ruine,

Qu'ils vous out couronnés?

Ah! s'ils n'avoient voulu que s'rracher la vie,

Avoient-ils donc besoin de Sceptres & de Loix?

Libres, ne pouvoient ils assouvir leur envie,

Sans ramper sous des Rois!
Comptons les Souverains que l'Europe rassemble;
Douze Chess vertueux sixeroient son bonheur,
Tour à tonr teints de sang de leur ruine ensemble,

Ils disputent l'honneur, Humanité, Justice, est-ce pour vous qu'ils règnent? Délateurs mutuels, persides, & jaloux, J'atteste leurs Ecrits, ils s'accusent, se craignent,

Et se méprisent tous. Cessent-ils de se nuire, ils manquent donc de sorce, S'ils suspendent leurs coups, c'est pour les préparer, Leur repos n'est jamais qu'une perside amorce

Pour mieux se déchirer. Qu'espèrent-ils ensin? Maitres d'un vaste Empire, Pour un Hameau de plus, combien de sang versé? Ridicule sureur, méprisable délire!

Moins cruel qu'insensé. Génie, activité, sois de gloire, courage, Vous me vantez en vain vos illustres travaux; Ah! l'austère équité distingue aux yeux du Sage,

Les monstres des Héros. O vous! qui, profanant les transports du Génie, Osez diviniser les sléaux des mortels; Que ne puis je étousser de votre voix impie

Les accens criminels.

Quoi ! le meurtre d'un Peuple honoreroit son Maître !
L' Homme n'a que son fang, on le traîne au trépas,
Vils flatteurs arrêtez, la Glorre peut elle être,

Où la vertu n'est pas ?

NA

Mars

Mais peut-être mon zèle en sa chaleur amère, Répand sur les objets de trop sombres couleurs, La Guerre est de tout tems, & ce mal necessaire,

N'est digne que de pleurs.

Non, ce sléau jamais ne fut inévitable,

La sagesse toujours peut prévenir ses coups,

Quand les Rois sont armés, il en est un coupable,

Peut être ils le font tous!

Ose-t-on, si les droits ne sont pas légitimes,
Aux yeux de l'Univers combattre en surieux?

S'ils sont douteux, le sang d'innocentes victimes,

Le prouvera-t-il mieux?
Ces sauvages sanglans que votre orgueil deteste,
Sont de soibles rivaux de tant d'excès honteux,
Et je ne vois que l'art de faire un maniseste,

Qui vous distingue d'eux.

Ils mangent les vaincus dans leur cruelle joie,
L'honneur de les tuer suffit à vos fureurs,
Qu'importe, à qui n'est plus, de devenir la proie,

Des vers ou des Vainqueurs?
Du moins si tant de sang rendoit à la Patrie,
Des jours plus fortunés, un tranquille destin;
Mais quel en est le prix? le Soldat est sans vie,

Et le Peuple sans pain!
Leurs trésors prodigués par des mains sanguinaires,
Les fruits de leurs sueurs livrés avec effort,
Que sont ils devenus? de leurs Fils, de leurs Frères.

Ils achètent la mort.

Politique éclairée, active, impénètrable!

Art sublime & profond, autant qu' infructueux!

Quel bien avez vous fait! l'Homme en est plus coupable,

Sans être plus heureux.

Comptez sur les Traités, signés par le mensonge!

Ces Actes Solomnels avec art préparés.

Traités rompus, refaits, oubliés comme un songe,

Aussitôt que jurés.

Ah! comment espérer un terme favorable,
Si toujours aux dépens du Monde gémissant,
Le plus foible prétend devenir redoutable,

Et le fort tout puissant?
Si la force du moins donnoit quelque assurance;
Mais l'Etat qui s'étend, a des Voisins nouveaux,
Les irrite sans doute: & doubler sa puissance,

C'est doubler ses rivaux.

Persépolis n'est plus qu'une cendre stérile,
Souvent à sa grandeur un Etat doit sa fin,
La soiblesse le garde, & Lucque est plus tranquille,
Que Dresde & que Berlin.

Rome

Rome soumit la Terre & se crut éternelle, Il lui vint des vainqueurs des Bords du Tanais, Et dix sois saccagée, à peine régna-t-elle,

Sur ses propres débris.

Ainsi le sort consond le courage & l'adresse,
Tour à tour par le ser, tout Empire est détruit.

Les Vainqueurs, les vaincus, la force & la foiblesse; Tôt ou tard tout périt.

Trente siècles de sang du meurtre héréditaire, Qu'ont-ils produit ensin, après mille combats? Au bonheur les mortels ont ils dans leur carrière,

Avancé d'un seul pas!
L'Humanité tremblante étend ses bras augustes,
Elle remplit les airs de ses cris douloureux.
N'est-il donc plus d'espoir? O vous Rois! soyez justes,

Et le Monde est heureux. Voilà votre devoir & voila votre Gloire, Toute autre n'st qu'un crime; écoutez vos sujets, Vous ne leur devez point d'exploits ni de victoire,

Vous leur dèvez la Paix. Salomon, & Numa dans leurs Cité bornée, Ont égalé le nom des plus heureux Guerriers, La Paix a ses Héros, l'Olive fortunée

A l'éclat des lauriers.

Un jour il s'éteindra ce préjugé feroce,
Q' croit tous les mortels nés pour se tourmenter?

Leur sang será sacré, malheur à l'ame atroce,

Qui voudroit en douter. Déjà par les beaux Arts l'Europe est adoucie, Les mœurs pourront un jour ce que n'ont pu les Loix : Et les sières lecons de la Philosophie

Feront rougir les Rois: Arne, Venise & Rome ont frayé cette route, De leur douce vertu le bonheur est le prix. Un jour le même myrthe embellira sans doute,

Londres, Vienne & Paris.

Ma redoutable voix a tonné sur le crime,

Paix! je n'en ai point pour chanter tes attraits,

ètre les Humains de ton charme sublime,

Peins toi par tes bienfaits.

O Thérèse, ô Louis, ô vertus plus qu'humaines;
Mes voeux sont entendus, & j'en crois votre cœur,
Eternisez vos noeuds, l'Europe craint des chaînes,

Donnez lui le bonheur.

13

Die

ELEGY on the death of a Lady. By Mr. Mason.

THE midnight clock has toll'd; and hark, the bell
Of death beats flow! heard ye the note profound?
It pauses now: and now, with rising knell,
Flings to the hollow gale its sullen sound.

Yes * * * is dead. Attend the firain,
Daughters of Albion! Ye that, light as air,
So oft have tript in her fantastic train,
With hearts as gay, and faces half as fair:

For she was fair beyond your brightest bloom:
(This envy owns, since now her bloom is sled)
Fair as the forms that, wove in fancy's loom,
Float in light vision round the poet's head.

Whene'er with fost serenity she smil'd,
Or caught the orient blush of quick surprize,
How sweetly mutable, how brightly wild,
The liquid lustre darted from her eyes?

Each look, each motion wak'd a new-born grace,
That o'er her form its transient glory cast:
Some lovelier wonder foon usurp'd the place,
Chas'd by a charm still lovelier than the last.

That bell again! It tells us what she is:
On what she was no more the strain prolong:
Luxuriant fancy pause: an hour like this
Demands the tribute of a serious song.

Maria claims it from that fable bier,
Where cold and wan the slumberer rests her head;
In still small whispers to reslection's ear,
She breathes the solemn dictates of the dead.

O catch the aweful notes, and lift them loud;
Proclaim the theme, by fage, by fool rever'd;
Hear it, ye young, ye vain, ye great, ye proud;
'Tis nature speaks, and nature will be heard.

Yes, ye shall hear, and tremble as ye hear,
While, high with health, your hearts exulting leap:
Ev'n in the midst of pleasure's mad career,
The mental Monitor shall wake and weep.

For fay, than * * *'s propitious star,
What brighter planet on your births arose;

Or

and 1

may l

Or gave of fortune's gifts an ampler share, In life to lavish, or by death to lose!

Early to lose; while, borne on busy wing, Ye sip the nectar of each varying bloom: Nor fear, while basking in the beams of spring, The wint'ry storm that sweeps you to the tomb.

Think of her fate! revere the heav'nly hand
That led her hence, though foon, by steps so slow;
Long at her couch death took his patient stand,
And menac'd oft, and oft withheld the blow:

To give reflection time, with lenient art, Each fond delufion from her foul to steal; Teach her from folly peaceably to part, And wean her from a world she lov'd so well.

Say, are you fure his mercy shall extend
To you so long a span? Alas, ye sigh:
Make then, while yet ye may, your God your friend,
And learn with equal ease to sleep or die!

Nor think the muse, whose sober voice ye hear, Contracts with bigot frown her sullen brow; Casts round religion's orbs the mists of sear, Or shades with horrors, what with smiles should glow.

No; she would warm you with feraphic fire, Heirs as ye are of heav'n's eternal day;] Would bid ye boldly to that heav'n aspire, Not fink and slumber in your cells of clay.

Know, ye were form'd to range you azure field.

In you æthereal founts of bliss to lave;

Force then, secure in Faith's protecting shield,

The sting from death, the vict'ry from the grave.

Is this the bigot's rant? Away ye vain,
Your hopes, your fears in doubt, in dulness steep:
Go sooth your souls in sickness, grief, or pain,
With the sad solace of eternal sleep.

Yet will I praise you, tristers as ye are,
More than those † preachers of your fav'rite creed,
Who proudly swell the brazen throat of war,
Who form the phalanx, bid the battle bleed;

No

† In a book of French verses, entitled Oeuwres du Philosophe de sans Souci, and lately reprinted at Berlin by authority, under the title of Poesses Diverses, may be found an epistle to marshal Keith, written professedly against the immortality

Nor wish for more: who conquer, but to die.

Hear, folly, hear; and triumph in the tale:

Like you, they reason; not, like you, enjoy

The breeze of bliss that fills your silken sail:

On pleasure's glitt'ring stream ye gayly steer Your little course to cold oblivion's shore: They dare the storm, and, thro' th' inclement year, Stem the rough surge, and brave the torrent's roar.

Is it for glory? that just fate denies.

Long must the warrior moulder in his shroud,
E'er from her trump the heav'n-breath'd accents rise,
That lift the hero from the fighting croud.

Is it his grasp of empire to extend?

To curb the fury of insulting foes?

Ambition, cease: the idle contest end:

'Tis but a kingdom thou canst win or lose.

And why must murder'd myriads lose their all,

(If life be all) why desolation lour,

With famish'd frown, on this affrighted ball,

That thou may'st slame the meteor of an hour?

Go wifer ye, that flutter life away, Crown with the mantling juice the goblet high; Weave the light dance with festive freedom gay, And live your moment, fince the next ye die.

Yet know, vain sceptics, know th'Almighty-Mind, Who breath'd on man a portion of his fire, Bad his free soul, by earth nor time confin'd, To heav'n, to immortality aspire.

Nor shall the pile of hope, his mercy rear'd, By vain philosophy be e'er destroy'd: Eternity, by all or wish'd or fear'd, Shall be by all or suffer'd or enjoy'd.

Written in 1760.

mortality of the foul. By way of specimen of the whole, take the following lines.

De l'avenir, cher Keith, jugeons par le passé; Comme avant que je susse il n'avoit point pensé, De meme, apres ma mort, quand toutes mes parties Par la corruption seront aneanties, Par un meme destin il ne pensera plus; Non, rien n'est plus certain, soyons-en convincu, &c.

It is to this epiftle, that the rest of the elegy alludes.

To a young Nobleman leaving the university. By the same.

E'ER yet, ingenuous youth, thy steps retire
From Cam's smooth margin, and the peaceful vale,
Where Science call'd thee to her studious quire,
And met thee musing in her cloysters pale:

O! let thy friend (and may he boast the name)
Breathe from his artless reed one parting lay;
A lay like this thy early virtues claim,
And this let voluntary friendship pay.

Yet know, the time arrives, the dangerous time, When all those virtues, opening now so fair, Transplanted to the world's tempestuous clime, Must learn each passion's boist'rous breath to bear.

There, if ambition pestilent and pale,
Or luxury should taint their vernal glow;
If cold self-interest, with her chilling gale,
Should blast th'unfolding blossoms e'er they blow;

If mimic hues, by art or fashion spread,
Their genuine simple colouring should supply,
O! with them may these laureate honours fade;
And with them (if it can) my friendship die.

Then do not blame, if, though thyself inspire, Cautious I strike the panegyric string; The muse full oft pursues a meteor fire, And, vainly vent'rous, soars on waxen wing.

Too actively awake at Friendship's voice,
The poet's bosom pours the fervent strain,
Till sad Resection blames the haughty choice,
And oft invokes Oblivion's aid in vain.

Call we the shade of Pope, from the blest bower
Where thron'd he sits with many a tuneful sage;
Ask, if he ne'er bemoans that hapless hour
When St. John's name illumin'd glory's page?

Ask, if the wretch, who dar'd his mem'ry stain,
Ask, if his country's, his religion's foe
Deserv'd the meed that Marlborough fail'd to gain,
The deathless meed, he only could bestow?

· Alluding to this couplet of Mr. Pope's.

ng

"To Cato, Virgil paid one honest line,
O let my country's friend, illumine mine."

The bard will tell thee, the misguided praise Clouds the celestial funshine of his breast; Ev'n now, repentant of his erring lays, He heaves a figh amid the realms of rest.

If Pope through friendship fail'd, indignant view, Yet pity Dryden; hark, whene'er he fings, How adulation drops her courtly dew On titled rhymers, and inglorious kings.

See, from the depths of his exhaustless mine,
His glittering stores the tuneful spendthrist throws;
Where fear or interest bids, behold they shine;
Now grace a Cromwell's, now a Charles's brows.

Born with too generous, or too mean a heart,
Dryden! in vain to thee those stores were lent:
Thy sweetest numbers but a trisling art;
Thy strongest diction idly eloquent.

The fimplest lyre, if truth directs its lays,
Warbles a melody ne'er heard from thine,
Not to disgust with false, or venal praise,
Was Parnell's modest fame, and may be mine.

Go then, my friend, nor let thy candid breast Condemn me, if I check the plausive string; Go to the wayward world; compleat the rest; Be, what the purest muse would wish to sing.

Be still thyself; that open path of truth,
Which led thee here, let manhood firm pursue;
Retain the sweet simplicity of youth,
And all thy virtue dictates, dare to do.

Still scorn, with conscious pride, the mask of art;
On vice's front let fearful caution lour,
And teach the diffident, discreeter part
Of knaves that plot, and fools that sawn for power.

So, round thy brow, when age's honours fpread,
When Death's cold hand unstrings thy Mason's lyre,
When the green turf lies lightly on his head,
Thy worth shall some superior bard inspire:

He, to the amplest bounds of time's domain,
On rapture's plume shall give thy name to fly;
For trust, with reverence trust this * Sabine strain:
"The muse forbids the virtuous man to die."

Dignum laude virum musa vetat mori.

INCONSTANCY, an irregular ODE.

VARIUM ET MUTABILE.

WHAT form is that, whose loose light Vest,
Borne on the restless gale,
Quick-glancing seems successively posses'd
Of brighter tints than paint the peacock's tail?
See, as it undulates in air,
And wantons in the folar blaze,
Not so resulgent do the plumes appear,
Which in his radiant orb that beauteous bird displays.
Save me! oh save me! from her wiles,
For surely 'tis that deity
Born of the shifting wind and faithless sea,
Who daily multitudes beguiles,
On earth y'clep'd inconstancy.

It is, it is; else wherefore glows
That changeful crescent on her brows?
Else wherefore see we on her hand
That colour-varying creature stand
(As 'twere upon his proper throne)
The air-sustain'd cameleon?
Else wherefore, say, that wayward mien,
Where transient gladness gleams awhile,
To teach us mourn its vanish'd smile
When Sorrow saddens-o'er the scene?
Else wherefore to an ice-form'd sphere
Trust's she, so bold, her ticklish tread?
More safely stands the mariner
On the tall galley's top-mast-head
When russing tempests rouse old Ocean from his bed.

This deity's delufive art
Oft dips in anguish, Cupid's dart;
Then let it strike or nymph or swain
In turn you hear them both complain
"Of slighted vows and cold disdain."
Sworn enemy to mutual love,
It teaches youthful hearts to rove,
Warns them sidelity to shun,
Derides as tasteless, truth to one,

Bids them take pattern from the roving bee, And mocks the conflant turtle's plaintive melody.

Here all thy torments spend, shed all thy store
Of ills on this detested servile race,
Wretches who wear a project-serving face,
They feel their just reward and feel no more.
But from each biting blast that blows,
That blossom guard which humbly grows,
In Friendsbips fost ring ray.
Oh! let me shield this beauteous slower,
From the dread Instuence of thy power,
By open-handed Faith, unknowing to betray.

Yet what avails, Sincerity!

Thy tongue's first commerce with thy heart,
Thy carriage, undifguis'd and free?

Since Calumny's infidious art,
Can whisper in Affection's ear,
Falsehoods injurious and severe;
Can Discord sow in Friendship's soil,
And smile at her successful toil!

Can mark with extacy the alter'd Eye,
And sweet speech chang'd, to taunting, sharp reply.

But why repine? fince nought we see
On earth but instability:
Health, riches, beauty, power and all,
That sublunary liss we call,
Sits wav'ring like the thistle's crown,
Of light and vegetable down.
Whose plumy globe the gentlest gales impair,
Unseat its winged seeds, and scatters them in air.

Felices animæ quibus bæc cognoscere primis Inque domos superas scandere, cura fuit. Credibile est illas, pariter vitiisque locisque Altius humanis, exeruisse caput.

OVID. FAST.

WHILE clear the night, and ev'ry thought ferene, Let fancy wander o'er the folemn scene : And, wing'd by active contemplation rife Amidst the radiant wonders of the skies. Here Cassiopeia fills a lucid throne, There blaze the splendors of the Northern crown: While the flow car the cold Triones roll O'er the pale countries of the frozen pole, With faithful beams conduct the wand'ring ship O'er the wide defart of the pathless deep. Throughout the Galaxy's extended line, Unnumber'd orbs in gay confusion thine: Where ev'ry star that gilds the gloom of night, With the faint tremblings of a diftant light, Perhaps illumes some system of its own With the strong influence of a radiant sun.

Plac'd on the verge, which Titan's realm confines, The flow revolving orb of Saturn shines; Where the bright pow'r whose near approaching ray Gilds our gay climates with the blaze of day, On those dark regions glimmers from afar, With the pale lustre of a twinkling star. While, glowing with unmitigated day, The nearer planets roll their rapid way.

Let stupid atheists boast th' atomick dance,
And call these beauteous worlds the work of chance:
But nobler minds, from guilt and passion free,
Where truth unclouded darts her heav'nly ray,
Or on the earth, or in the ætherial road,
Survey the footsteps of a ruling God;
Sole Lord of nature's universal frame:
Thro' endless years unchangeably the same:
Whose presence, unconfin'd by time or place,
Fills all the vast immensity of space.
He saw while matter yet a chaos lay:
The shapeless chaos own'd his potent sway.
His single Fiat form'd th' amazing whole,
And taught the new-born planets where to roll:
Vol. V.

With

With wise direction curv'd their steady course, Imprest the central and projectile force, Lest in one mass their orbs confus'd should run, Drawn by th' attractive virtue of the sun, Or quit the harmonious round, and wildly stray Beyond the limits of his genial ray.

To thee, Endymion, I devote my fong;
To minds like thee, these subjects best belong;
Whose curious thoughts, with active freedom, soar,
And trace the wonders of creating pow'r.
For this, some nobler pen shall speak thy same;
But let the muse indulge a gentler theme,
While pleas'd she tells thy more engaging part,
Thy social temper and diffusive heart.
Unless these charms their soft'ning aid bestow,
Science turns pride, and common wit a foe.

On reading Miss CARTER's Poems in MS. By Lord LITTELTON.

SUCH were the notes that struck the wond'ring ear Of filent night, when, on the verdant banks Of Siloe's hallow'd brook, celeftial harps, Accorded to feraphic voices, fung Glory to God on high, and on the earth Peace and good-will to men!-Refume the lyre, Chauntress divine, and ev'ry Briton call Its melody to hear-fo shall thy strains, More pow'rful than the fong of Orpheus, tame The favage heart of brutal vice, and bend At pure religion's shrine the stubborn knees Of bold impiety. — Greece shall no more Of Lesbian Sappho boast, whose wanton muse, Like a false syren, while she charm'd, seduc'd To guilt and ruin. For the facred head Of Britain's poetess, the Virtues twine A nobler wreath, by them from Eden's grove Unfading gather'd, and direct the hand Of — to fix it on her brows.

VERSES by Sir WALTER RALEIGH.

GOE, foul, the bodyes guefte,
Upon a thankless arrante,
Fear not to touch the beste,
The truth shall be thy warrante.
Goe, fince I needs must die,
And give them all the lye.

Goe, tell the court it glowse,
And shines like painted wood;
Goe, tell the church it showes
What's good, does no good.
If court and church replye,
Give court and church the lye.

Tell potentates, they live
Actinge, but oh! their actions
Not lov'd unless they give!
Not strong, but by their factions.
If potentates replye,
Give potentates the lye.

Tell me not of high condition,
That rule affairs of state,
There purpose is ambition,
There practice only hate.
And if they do replye,
Then give them all the lye.

Tell those that brave it moste,
They begge more by spendinge;
Who in their greatest coste,
Seek nothinge but commendinge.
And if they make replye,
Then give them all the lye.

Tell love it is but luste;
Tell time it is but motion;
Tell flesh it is but duste.
And wish them not replye,
For thou must give the lye.

Tell age it daily wasteth;
Tell honour how it alters;
Tell beawty that it blasteth;
Tell favour that she falters.
And as they do replye,
Give every one the lye.

Tell wit how much it wrangles
In fickle points of niceness;
Tell wisdom she entangles
Herself in over-wiseness.
And if they do replye,
Then give them both the lye.

Tell phifick of her boldness;
Tell skill it is pretension;
Tell charety of coldness;
Tell law it is contention.
And if they yield replye,
Then give them still the lye.

Tell fortune of her blindness;
Tell nature of decay;
Tell friendship of unkindness;
Tell justice of delay.
And if they do replye,
Then give them all the lye.

Tell artes they have no foundness,
But vary by esteeming;
Tell skollers lack profoundness,
And stand too much on seemine.
If artes and skollers replye,
Give artes and skollers the lye.

Tell faith it's fled the cittye;
Tell how the country errethe;
Tell manhood shakes of pytie;
Tell virtue least preferreth.
And if they do replye,
Spare not to give the lye.

So when thou hast, as I
Commanded the, done blabbing;
Althoughe to give the lye,
Deserves no less than stabbing;
Yet stab at the whose will,
No stabb the soul can kill.

An Imitation from the Spectator. By Mr. ROBERT LLOYD.

A Month hath roll'd its lazy hours away, Since Delia's presence bless'd her longing swain: How cou'd he brook the sluggish time's delay, What charm could soften such an age of pain?

One fond reflection still his bosom chear'd,
And sooth'd the torments of a lover's care,
"Twas that for Delia's self the bow'r he rear'd,
And sancy plac'd the nymph already there.

O come, dear maid, and with a gentle smile, Such as lights up my lovely fair one's face, Screen the product of thy shepherd's toil, Nor rob the villa of the villa's grace. Whate'er improvements strike thy curious sight,
Thy taste hath form'd—let me not call it mine,
Since when I muse on thee, and feed delight,
I form no thought that is not wholly thine.

Th' apartments destin'd for my charmer's use, (For love in trisles is conspicuous shewn) Can scarce an object to thy view produce, But bears the dear resemblance of thine own.

And trust me, love, I could almost believe
This little spot the mansion of my fair;
But that, awak'd from fancy's dreams, I grieve
To find its proper owner is not there.

Oh! I could doat upon the rural scene,
Its prospect over hill and champaign wide,
But that it marks the tedious way between,
That parts thy Damon from his promis'd bride.

The gardens now put forth their blossoms sweet, In Nature's flow'ry mantle gaily drest; The close-trimm'd hedge, and circling border neat, All ask my Delia for their dearest guest.

The lilly pale, the purple blushing rose, In this fair spot their mingled beauties join; The woodbine here its curling tendrils throws, In wreaths fantastic round the mantling vine.

The branching arbour here for lovers made,
For dalliance met, or fong, or amorous tale,
Shall oft protect us with its cooling shade,
When sultry Phæbus burns the lonely vale.

Tis all another paradife around,
And, trust me, so it would appear to me,
Like the first man, were I not lonely found,
And but half blest, my Delia, wanting thee.

For two, but two, I've form'd a lovely walk,
And I have call'd it by my fair one's name;
Here bleft with thee, t'enjoy thy pleafing talk,
While fools and madmen bow the knee to fame.

The rostic path already have I try'd,
Oft at the sinking of the setting day;
And while, my love, I thought thee by my side,
With careful steps have worn its edge away.

With thee I've held discourse, how passing sweet!
While fancy brought thee to my raptur'd dream,
With thee have prattled in my lone retreat,
And talk'd down suns, on love's delicious theme.

Whate

Oft as I wander thro' the rustic crowd,
Musing with downcast look, and solded arms,
They stare with wonder, when I rave aloud,
And dwell with rapture on the artless charms.

They call me mad, and oft with finger rude
Point at me leering, as I heedless pass;
Yet Colin knows the cause; for love is shrewd,
And the young shepherd courts the farmer's lass.

Among the fruits that grace this little feat,
And all around their clust'ring foliage spread,
Here may'st thou cull the peach, or nect'rine sweet,
And pluck the strawberry from its native bed.

And all along the river's verdant fide
I've planted elms, which rife in even row;
And fling their lofty branches far and wide,
Which float reflected in the lake below.

Since I've been absent from my lovely fair, Imagination forms a thousand schemes; For O! my Delia, thou art all my care, And all with me is love and golden dreams.

O flatt'ring promise of secure delight!

When will the lazy-pacing hours be o'er?

That I may fly with rapture to thy sight,

And we shall meet again to part no more.

To a Lady before Marriage. By the late ingenious Mr. Tickel. Not published in his Works.

H! form'd by nature, and refin'd by art, With charms to win, and sense to fix the heart! By thousands fought, Clotilda, canst thou free Thy crowd of captives, and descend to me? Content in shades obscure to waste thy life, A hidden beauty, and a country wife. O! liften while thy fummers are my theme, Ah! footh thy partner in his waking dream! In some small hamlet on the lonely plain, Where Thames, thro' meadows, rolls his mazy train; Or where high Windsor, thick with greens array'd, Waves his old oaks, and spreads his ample shade, Fancy has figur'd out our calm retreat; Already round the visionary seat Our limes begin to shoot, our flow'rs to spring, The brooks to murmur, and the birds to fing. Where do'ft thou lie, thou thinly-peopled green? Thou nameless lawn, and village yet unseen?

Where

Where fons, contented with their native ground, Ne'er travel'd further than ten furlongs round; And the tann'd peasant, and his ruddy bride, Were born together, and together died. Where early larks best tell the morning light, And only Philomel diffurbs the night; 'Midst gardens here my humble pile shall rise, With sweets surrounded of ten thousand dies; All favage where th'embroider'd gardens end, The haunt of echoes shall my woods ascend; And oh! if heav'n th' ambitious thought approve, A rill shall warble cross the gloomy grove, A little rill, o'er pebbly beds convey'd, Gush down the steep, and glitter thro' the glade. What chearing scents those bord'ring banks exhale! How loud that heifer lowes from yonder vale! That thrush, how shrill! his note so clear, so high, He drowns each feather'd minstrel of the sky. Here let me trace, beneath the purpled morn, The deep-mouth'd beagle, and the sprightly horn; Or lure the trout with well-dissembled flies, Or fetch the flutt'ring partridge from the skies. Nor shall thy hand disdain to crop the vine, The downy peach, or flavour'd nectarine; Or rob the bee-hive of its golden hoard, And bear th' unbought luxuriance to thy board. Sometimes my books by day shall kill the hours, While from thy needle rise the filken flow'rs; And thou, by turns, to ease my feeble fight, Resume the volume, and deceive the night. Oh! when I mark thy twinkling eyes opprest, Soft whisp'ring, let me warn my love to rest; Then watch thee, charm'd, while fleep locks every fense, And to fweet heav'n commend thy innocence. Thus reign'd our fathers o'er the rural fold, Wise, hale, and honest in the days of old; Till courts arose, where substance pays for show, And specious joys are bought with real woe. See Flavia's pendants, large, well-spread, and right, The ear that wears them hears a fool each night: Mark how th' embroider'd col'nel sneaks away, To shun the with ring dame that made him gay; That knave, to gain a title, lost his fame; That rais'd his credit by a daughter's shame; This coxcomb's ribband cost him half his land, And oaks, unnumber'd, bought that fool a wand. Fond man, as all his forrows were too few, Acquires strange wants that nature never knew.

Бу

By midnight lamps he emulates the day, And fleeps, perverse, the chearful funs away : From goblets, high embost, his wine must glide, Round his clos'd fight the gorgeous curtain slide; Fruits, ere their time, to grace his pomp must rife, And three untafted courses glut his eyes. For this are nature's gentle calls withstood, The voice of conscience, and the bonds of blood: This wisdom thy reward for ev'ry pain, And this gay glory all thy mighty gain. Fair phantoms woo'd and fcorn'd from age to age, Since bards began to laugh, or priests to rage. And yet, just curse on man's aspiring kind, Prone to ambition, to example blind, Our children's children shall our steps pursue, And the same errors be for ever new. Mean while, in hope a guiltless country swain, My reed with warblings chears th' imagin'd plain, Hail humble shades, where truth and silence dwell! Thou noify town, and faithless court, farewell! Farewell, ambition, once my darling flame! The thirst of lucre, and the charm of fame! In life's by-road, that winds thro' paths unknown, My days, tho' number'd, shall be all my own. Here shall they end, (O! might they twice begin) And all be white the fates intend to spin.

APRAYER for INDIFFERENCE. By Mrs. G-

Found in Richmond Gardens.

OFT I've implor'd the gods in vain, And pray'd till I've been weary! For once I'll strive my wish to gain, Of Oberon, the fairy.

Sweet airy being, wanton sprite, Who liv'st in woods unseen; And oft, by Cynthia's filver light, Trip'st gaily o'er the green;

If e'er thy pitying heart was mov'd,
(As ancient stories tell)
And for th' Athenian maid, who lov'd,
Thou fought'st a wond'rous spell;

Oh! deign once more t'exert thy pow'r,
Haply fome herb or tree,
Sov'reign as juice from western flow'r,
Conceals a balm for me.

I ask no kind return in love, No tempting charm to please; Far from that heart such gifts remove, Which sighs for peace and ease.

Nor ease, nor peace, that heart can know, That like the needle true, Turns at the touch of joy or woe, But, turning, trembles too.

For as diffress the soul can wound,
'Tis plain in each degree;
Bliss goes but to a certain bound,
Beyond 'tis agony.

Then take this treacherous sense of mine, Which dooms me still to smart; Which pleasure can to pain refine, To pain new pangs impart!

Oh! haste to shed the sov'reign balm, My shatter'd nerves new string; And for my guest, serenely calm, The nymph, Indisference, bring!

At her approach, see hope, see fear, See expectation fly; With disappointment, in the rear, That blasts the purpos'd joy.

The tears which pity taught to flow,
My eyes shall then disown;
The heart which throbb'd for others woe,
Shall then scarce feel its own.

The wounds which now each moment bleed, Each moment then shall close; And peaceful days shall still succeed, To nights of sweet repose.

Oh, fairy elf! but grant me this, This one kind comfort fend; And so may never-fading bliss, Thy flowery paths attend!

I alk

So may the glow-worm's glimmering light
Thy tiny footsteps lead,
To some new region of delight,
Unknown to mortal tread!

GENIUS, ENVY, and TIME.

Addressed to WILLIAM HOGARTH, Efg; By Mr. LLOYD.

I N all professionary skill,
There never was, or ever will
Be excellence, or exhibition,
But fools are up in opposition;
Each letter'd, grave, pedantic dunce;
Wakes from his lethargy at once,
Shrugs, shakes his head, and rubs his eyes,
And, being dull, looks wond'rous wise,
With solemn phiz, and critic schowl,
The wisdom of his brother owl.
These observations, rather stale,
May borrow spirit from a tale.

GENIUS, a buffling lad of parts, Who all things did by fits and flarts, Nothing above him, or below him, Would make a riot or a poem, From excentricity of thought Not always do the thing he ought: But, was it once his own election, Woold bring all matters to perfection; Would act, defign, engrave, write, paint, But neither from the least constraint; Who hated all pedantic schools, And scorn'd the gloss of knowing fools, That hold perfection all in all, Yet treat it as mechanical, And give the same sufficient rule To make a poem as a stool.— From the first spring-time of his youth, Was downright worshipper of truth; And with a free and liberal spirit, His courtship paid to Lady MERIT.

ENVY, a squint-ey'd, mere old maid, Well known among the scribbling trade; A hag, so very, very thin, Her bones peep'd thro' her bladder-skin; Who could not for her soul abide That solks should praise, where she must chide, Follow'd the youth where'er he went, To marr each good and brave intent; Would lies, and plots, and mischief hatch, To ruin bim, and spoil the match.

Honour

Honour she held at bold desiance, Talk'd much of faction, gang, alliance, As if the real sons of taste Had clubb'd to lay a desart waste.

In short, wherever Gentus came You'd find this antiquated dame; Whate'er he did, where'er he went, She follow'd only to torment; Call'd Merst by a thousand names, Which deceney of truth disclaims; While all her bus'ness, toil, and care, Was to depreciate, lye, compare, To pull the modish maiden down, And blast her same to all the town.

The youth, enflam'd with conscious pride, To prince Posterity apply'd, Who gave his answer thus in rhyme, By his chief minister, old TIME.

- ' Repine not at what pedants fay,
 'We'll bring thee forward on thy way;
- " If wither'd Envy ftrive to hurt
- With lies, with impudence and dirt,
- ' You only pay a common tax,
- " Which fool, and knave, and dunce exacts.
- Be this thy comfort, this thy joy,
- Thy strength is in its prime, my boy,
- ' And ev'ry year thy vigour grows,
- Impairs the credit of thy foes.
- Envy shall fink, and be no more
- Than what her Naiads were before;
- Mere excremental maggots, bred
- 'In poet's topfy-turvy head,
 'Born, like a momentary fly,
- ' To flutter, buzz about, and die.
- ' Yet, GENIUS, mark what I presage,
 ' Who look thro' ev'ry distant age:
- " MERIT shall bless thee with her charms,
- FAME lift thy offspring in her arms,
- . And flamp eternity of grace
- ' On all thy numerous, various race.
- Roubilliac, Wilton, names as high
- ' As Phidias of antiquity,

nour

- ' Shall strength, expression, manner, give,
- And make e'en marble breathe and live;
 While Sigismunda's deep diffress,
- Which looks the foul of wretchedness,

- 204
- When I with flow and foft'ning pen
- ' Have gone o'er all the tints again,
- Shall urge a bold and proper claim
- To level half the ancient fame;
- While future ages, yet unknown,
- With critic air shall proudly own
- " Thy Hogarth, first of ev'ry clime,
- For humour keen or strong sublime;
 And hail him from his fire and spirit,
- The child of Genius and of Merit.

Lib. IV. Ode 3. HORACE.

- (1) QUEM tu, Melpomene, semel Nascentem placido lumine videris,
- Illum non labor istmius
- (3) Clarabit pugilem, non equus impiger Curru ducet Achaico
 - (2) Victorem, neque res bellica deliis Ornatum foliis ducem Oftendet capitolio.
- (4) Sed quæ Tibur aquæ fertile persiuunt,
- Et spissæ nemorum comæ, Fingent æolio carmine nobilem.
- Romæ principis urbium
- Dignatur soboles inter amabiles
 (5) Vatum ponere me choros,
 - Et jam dente minus mordeor invido.

 O! testudinis aureæ
- (6) Dulcem quæ strepitum, Pieri, temperas,
 - (7) O! mutis quoque piscibus
 - Donatura cygni, si libeat, sonum!
 (7) Totum hoc muneris tui est,
 - Quod monstror digito prætereuntium,
- Romanæ fidicen Lyræ:
 (7) Quod spiro et placeo, si placeo, tuum est.

IMITATED.

(1) THE youth, whose birth the fisters twain Who o'er the fock and buskin reign, View with propitious eye;

Will at their altars always ferve,

Will never from their dictates swerve, Their slave will live and die. Blest in his lot for other things, The pride of wealth, the pow'r of kings, He offers up no pray'rs;

(2) Heroes, unenvying can see, Not Prussia's king desires to be, Or any king—but theirs.

(3) The rapid steed he'll ne'er bestride,
With lords for wagers proud to ride,
Newmarket plains adorning;
At Arthur's he takes no delight,
To pass at dice the sleepless night,
And be undone by morning.

In senates he seeks not to fit,
And hear, amaz'd, persuasive Pitt
Govern the high debate;
In Westminster's long-sounding hall
He ne'er expects a serjeant's call,
Nor hopes to rival Pratt.

Though ministers can places give
To those who in their creed believe,
No such he puts his trust in;
Content, in tatters though he goes,
Content to want a pair of shoes,
So he but wear the buskin.

Him, if his fire to mercer binds,
He gives the indentures to the winds,
Disdaining to sell cambles;

(4) Away he hies to Drury-lane, Calls his old father Royal Dane, And thinks himself prince Hamlet.

(5) Where Garrick with judicious art Charms ev'ry ear, wins ev'ry heart,
And acts like one inspir'd;
There the fond youth puts in his claim,
Aspires to reach his mighty fame,
And be, like him, admir'd.

Like him, whose skill upon the stage
(6) Can make the dullest scenes engage,
And thousands come to hear 'em;

Full many a youth and many a maid, (7) Whose names, in play-house bills display'd, Shine proudly through the town; (7) Their tragic rage, their comic ease, Derive from him; and if they please, (7) They please from him alone. R. B.

BEAUTY and FASHION. AREPARTEE.

Mille habet ornatus, mille decenter habet.

TIB.

SAYS Beauty to Fashion, as they set at the toilette, "If I give a charm, you surely will spoil it; When you take it in hand, there's such murth'ring and mangling, "Tis fo metamorphos'd by your fiddling and fangling, That I scarce know my own, when I meet it again, Such changelings you make, both of women and men.

To confirm what I fay, look at Phryne, or Phillis, I'm fure that I gave 'em good rofes and lillies: Now what have you done? - Let the world be the judge: Why you daub 'em all over with cold cream and rouge, That, like Thisbe in Ovid, one cannot come at 'em, Unless thro' a mud-wall of paint and pomatum.

And as to your drefs, one would think you quite mad, From the head to the heel 'tis all masquerade; With your flounces and furbelows, facks, trolloppees, Now sweeping the ground, and now up to your knees, Your pinking, and crimping, and chevaux de frize, And all the fantastical cuts of the mode,

You look like a bedlamite, ragged and proud! Then of late you're fo fickle, that few people mind you; For my part, I never can tell where to find you:

Now dreft in a cap, now naked in none, Now loose in a mob, now close in a Joan; Without handkerchief now, and now buried in ruff, Now plain as a Quaker, now all of a puff; Now a shape in neat stays, now a slattern in jumps, Now high in French heels, now low in your pumps; Now monst'rous in hoop, now trapish, and walking With your petticoats clung to your heels, like a maulkin; Like the cock on the Tower, that shews you the weather, You are hardly the fame for two days together."

Thus Beauty begnn, and Miss Fashion reply'd, "Who does most for the fex?-Let it fairly be try'd, And they that look round 'em will presently see, They're much less beholden to you than to me: I grant it, indeed, mighty favours you boaft, But how scanty your favours, how scarce is a toast?

A shape, a complexion, you confer now and then, But to one that you give, you refuse it to ten; In one you fucceed, in another you fail, Here your rose is too red, there your lilly's too pale; Or some feature or other is always amis: And pray, let me know, when you finish'd a piece, But what I was oblig'd to correct, or touch over, Or you never would have either husband or lover? For I hope, my fair lady, you do not forget, Though you find the thread, that 'tis I make the net; And say what you please, it must be allow'd, That a woman is nothing. unless a-la-mode; Neglected she lives, and no beauty avails. For what is a ship without rigging or fails? Like the diamonds when rough, are the charms you bestow; But mine is the fetting and polishing too. Your nymphs, with their shapes, their complexions, and features, What are they without me, but poor aukward creatures? The route, the affembly, the playhouse will tell, 'Tis I form the beau, and I finish the belle; 'Tis by me that these beauties must all be supply'd, Which Time has withdrawn, or which you have deny'd : Impartial to all, did not I lend my aid, Both Venus and Cupid might throw up their trade, And even your ladyship die an old maid."

The PUPPET-SHOW.

From the posthumous Volumes of the Writings of the late Dr. Swift, and his Friends, lately published.

THE life of man to reprefent,
And turn it all to ridicule,
Wit did a puppet-show invent,
Where the chief actor is a fool.

The gods of old were logs of wood,

And worship was to puppers paid;
In antic dress the idol stood,

And priests and people bow'd the head.

No wonder then, if art began

The simple votaries to frame,

To shape in timber foolish man,

And confecrate the block to same.

That trees might rife from human forms,

The body to a trunk be turn'd,

And branches issue from the arms.

Thus

Thus Dædalus, and Qvid too,

That man's a blockhead have confest;

Powel and Stretch the hint pursue,

Life is a farce, the world a jest.

The same great truth South-Sea hath prov'd On that sam'd theatre, the alley, Where thousands by directors mov'd

Are now fad monuments of folly.

What Momus was of old to Jove,
The same a harlequin is now;
The former was buffoon above,

The latter is a punch below.

This fleeting scene is but a stage,
Where various images appear,

In different parts of youth and age,
Alike the prince and peafant share.

Some draw our eyes by being great,
False pomp conceals mere wood within,
And legislators rang'd in state

Are oft but wisdom in machine.

A flock may chance to wear a crown, And timber as a lord take place; A flatue may put on a frown,

And cheat us with a thinking face.

Others are blindly led away,
And made to act for ends unknown,
By the mere fpring of wires they play,
And speak in language not their own.

Too oft, alas! a fcolding wife
Usurps a jolly fellow's throne;
And many drink the cup of life,
Mix'd and embitter'd by a Joan.

In short, whatever men pursue
Of pleasure, folly, war, or love;
This mimic race brings all to view,
Alike they dress, they talk, they move.

Go on, great Stretch, with artful hand, Mortals to please and to deride; And when death breaks thy vital band, Thou shalt put on a pupper's pride.

Thou shalt in puny wood be shewn,

Thy image shall preserve thy same;

Ages to come thy worth shall own,

Point at thy limbs, and tell thy name.

^{*} Two puppet-show men.

Tell Tom he draws a farce in vain,

Before he looks in nature's glass;

Puns cannot form a witty scene,

Nor pedantry for humour pass.

To make men act as senseless wood,

And chatter in a mystic strain,

Is a mere force on slesh and blood,

And shews some error in the brain,

He that would thus refine on thee,
And turn thy stage into a school,
The jest of Punch will ever be,
And stand confest the greater fool.

PROLOGUE spon PROLOGUES.

Written by Mr. GARRICK.

AN old trite proverb let me quote!

As is your cloth, so cut your coat.—
To suit our author and his farce,
Short let me be! for wit is scarce.

Nor would I shew it, had I any,
The reasons why are strong and many.
Should I have wit, the piece have none,
A slash in pan with empty gun,
The piece is sure to be undone.
A tavern with a gaudy sign,
Whose bush is better than the wine,
May cheat you once.—Will that device,
Neat as Imported, cheat you twice?

Tis wrong to raife your expectations:
Poets be dull in dedications!
Dulness in these to wit preferBut there indeed you seldom err.
In prologues, prefaces, be flat!
A filver button spoils your hat.
A thread-bare coat might jokes escape,
Did not the blockheads lace the cape.
A case in point to this before ye,

Allow me, pray, to tell a story!

To turn the penny, once, a wit

Upon a curious fancy hit;

Hung out a board, on which he boasted,

Dinner for Three-pence! Boil'd and Roasted!

The hungry read, and in they trip,

With eager eye and smacking lip:

"Here, bring this boil'd and roasted, pray!"

Enter Potators---dres'd each way.

Vol. V

All star'd and rose, the house for sook And damn'd the dinner—kick'd the cook, My landlord found, (poor Patrick Kelly) There was no joking with the belly.

These facts laid down, then thus I reason:

Wit in a prologue's out of season--Yet still will you for jokes sit watching
Like Cock-Lane folks for Fanny's scratching,
And here my simile's so sit?
For Prologues are but Ghosts of wit;
Which mean to shew their art and skill,
And scratch you to their Author's will.

In short, for reasons great and small,

'Tis better to have none at all:

Prologues and Ghosts—a pattry trade!

So let them both at once be laid!

Say but the word—give your commands—

We'll tie our prologue—monger's hands:

Consine these culprits (bolding up bis bands) bind 'em tight,

Nor Girls can scratch nor Fools can write.

Mr. FOOTE's Address to the Public.

After a Profecution against bim for a Libel.

At Athens once, fair queen of arms and arts, There dwelt a citizen of moderate parts; Precise his manner, and demure his looks, His mind unletter'd, tho' he dealt in books; Amorous, tho' old; tho' dull, lov'd rapartee; And penn'd a paragraph most daintily: He aim'd at purity in all he said, And never once omitted eth, or ed; In hath, and doth, was rarely known to sail, Himself the hero of each little sale:

With wits and lords this man was much delighted, And once (it has been faid) was near being knighted.

One Aristophanes (a wicked wit
Who never heeded grace in what he writ)
Had mark'd the manner of this Grecian sage,
And thinking him a subject for the stage,
Had, from the lumber, cull'd with curious care,
His voice, his looks, his gesture, gait, and air,
His affectation, consequence, and mien,
And boldly launch'd him on the comic scene;
Loud peals of plaudits thro' the cirle ran,
All felt the satire, for all knew the man.

Then Peter—Petros was his classic name, Fearing the loss of dignity and fame, To a grave lawyer in a hurry slies, Opens his purse and begs his best advice. The fee secur'd, the lawyer strokes his band,

"The case you put I fully understand;
"The thing is plain from Coco's reports,

" For rules of poetry a'n't rules of courts:
" A libel this—I'll make the mummer know it."—

A Grecian constable took up the poet;
Restrain'd the fallies of his laughing muse,
Call'd harmless humour scandalous abuse:
The bard appeal'd from this severe decree,
Th' indulgent public set the pris'ner free:
Greece was to him what Dublin is to me.

PROLOGUE to Florizel and Perdita (a dramatic pastoral, altered by Mr. Garrick, from Shakespear's Winter Tale) written and spoken by Mr. Garrick.

TO various things the stage has been compar'd,
As apt ideas strike each humorous Bard:
This night, for want of better simile,
Let this our Theatre a Tavern be:
The poets Vintners, and the Waiters we.
So (as the cant and custom of the trade is)
You're welcome Gem'men, kindly welcome Ladies.
To draw in customers, our bills are spread,

You cannot miss the sign, 'tis Shakespear's Head.
From this same Head, this sountain-head divine,
For different palates springs a different wine!
In which no tricks, to strengthen or to thin 'em_____
Neat as imported—no French Brandy in 'em_____

Hence

Hence for the choicest spirits slows Champaign;
Whose sparkling atoms shoot thro' every vein,
Then mount in magic vapours, to th' enraptur'd brain!
Hence slow for martial minds potations strong;
And sweet love potions, for the fair and young.
For you, my hearts of oak, for your regale,

[To the upper gallery.

There's good old English Stingo, mild and stale. For high, luxurious souls with luscious smack; There's Sir John Falstaffe, is a butt of sack: And if the stronger liquors more invite ye; Bardolph is gin, and Pistol aqua vitæ. But should you call for Falstaffe, where to find him,

*He's gone—nor left one cup of fack behind him,
Sunk in his elbow chair, no more to roam;
No more with merry wags, to Eastcheap come;

He's gone—to jest, and laugh, and give his sack at home. As for the learned Critics, grave and deep,
Who catch at words, and catching fall asleep;
Who in the storms of passion--hum,--and haw!
For such, our master will no liquor draw—
So blindly thoughtful, and so darkly read,
They take Tom Dursey's for the Shakespear's Head.

A vintner once acquir'd both praise and gain, And fold much *Perry* for the best *Champaign*. Some rakes, this precious stuff did so allure; They drank whole nights, what's that-when wine is pure?

· Come, fill a bumper, Jack—I will my Lord—
· Here's cream-Damn'd fine-immense-upon my word!

Sir William, what say you—The best, believe me,
In this—Eh Jack—the Devil can't deceive me.'
Thus the wise Critic too, mistakes his wine,
Cries out, with listed eyes, 'Tis great !--divine!
Then jogs his neighbour, as the wonders strike him;
This Shakespear! Shakespear!--Oh, there's nothing like him!

In this night's various, and enchanted cup,
Some little Perry's mixt for filling up.
The five long acts, from which our three are taken,
Stretch'd out to + fixteen years, lay by, forfaken.
Lest then this precious liquor run to waste,
'Tis now confin'd and bottled for your taste.
'Tis my chief wish, my joy, my only plan,
To lose no drop of that immortal man!

• Mr. Quin had then left the stage.

† The action of the Winter's Tale as written by Shakespear, comprehend fexteen years.

ODE for the NEW YEAR 1762.

Written by William Whitehead, Efq; Peet Laureat.

Strophe:

GOD of slaughter, quit the scene,
Lay the crested helmet by;
Love commands, and Beauty's queen
Rules the power who rules the sky.
Janus, with well-omen'd grace,
Mounts the year's revolving car,
And forward turns his smiling face,
And longs to close the gates of war.
Enough of glory Albion knows—
Come, ye powers, of sweet repose,
On downy pinions move!
Let the war-worn legions own
Your gentler sway, and from the throne
Receive the laws of love!

Antistrophe.

Yet, if justice still requires
Roman arts, and Roman souls,
Britain breathes her wonted fires,
And her wonted thunder rolls.

Added to our fairer isle
Gallia mourns her bulwark gone,
Conquest pays the price of toil;
Either India is our own!

Ye sons of freedom grasp the sword,
Pour, ye rich, th' imprison'd hoard,
And teach it how to shine.

Each selfish, each contracted aim.
To glory's more exalted claim
Let luxury resign.

You too, ye British dames, may share,
If not the toils and dangers of the war,
At least its glory. From the Baltic shore,
From Runic virtue's native home,
Fraught with the tales of ancient lore,
Behold a fair instructress come!

mprehend

ODI

im!

When the fierce * female tyrant of the north Claim'd every realm her conquering arms could gain, When Discord, red with slaughter, issuing forth Saw Albert struggling with the victor's chain. The form beat high, and shook the coast, Th' exhaufted treasures of the land Could scarce supply th' embattled host, Or pay the infulting foe's demand. What then could beauty do ? + She gave Her treasur'd tribute to the brave, To her own foftness join'd the manly heart, Sustain'd the foldier's drooping arms, Confided in her genuine charms, And yielded every ornament of art. -We want them not. Yet, O ye fair, Should Gallia, obstinately vain, To her own ruin urge despair, And brave th' acknowledg'd master of the main; Should she through ling'ring years protract her fall, Through feas of blood to her destruction wade, Say, could ye feel the generous call, And own the fair example here pourtray'd? The royal dame Doubtless ye could. Would plead her dear adopted country's cause, And each indignant breast unite its slame To fave the land of liberty and laws.

ODE for His MAJESTY's Birth-Day.

June 4th, 1762.

By William Whitehead, Efq; Poet Laureat.

Stropbe.

O Flora, (faid th 'impatient queen, Who shares great Jove's eternal reign) Go breathe on yonder thorn; Wake into bloom th' emerging rofe, And let the fairest flower that blows The fairest month adorn.

* Margaret de Waldemar, commonly called the Semiramis of the North. † In the year 1395, the ladies of Mecklenburg, to support their Duke Albert's pretensions to the crown of Sweden, and to redeem him when he was taken prisoner, gave up all their jewels to the public; for which they afterwards received great employment and assistance of support of suppo wards received great emoluments and privileges, particularly the right of fuccession in fiets, which had before been appropriated to males only. Sacred

Allu mming t Sacred to Me that month shall rife, Whatever * contests shake the skies To give that month a name: Her April buds let Venus boast, Let Maia range her painted host; But June is Juno's claim.

Antistrophe.

And, Goddess, know, in after times (I name not days, I name not climes)
From Nature's noblest throes
A human slower shall glad the earth,
And the same month disclose his birth,
Which bears the blushing rose.
Nations shall bless his mild command.
And fragrance fill th'exulting land
Where'er I six his throne."

Britannia listen'd as she spoke,
And from her lips prophetic broke
The slower shall be my own!

D goddess of connubial love,
Thou sister, and thou wife of Jove,
To thee the suppliant voice we raise!
We name not months, we name not days,
For, where thy smiles propitious shine,
The whole prolific year is thine.

Accordant to the trembling strings, Hark, the general chorus swells! From every heart it springs,

On every tongue it dwells. Goddess of connubial love, Sister Thou, and wife of Jove, Bid the genial powers that glide On æther's all pervading tide,

Or from the fount of life that stream Mingling with the folar beam, Bid them here, at Virtue's shrine, In chastest bands of union join,

'Till many a GEORGE, and many a CHARLOTTE prove How much to Thee we owe, queen of connubial love!

Alluding to the contention between the goddesses in Ovid's Fasti, about

Extraded from Mr. W. Whitehead's CHARGE TO the PORTS.

TIME was when poets play'd the thorough game,
Swore, drank, and blufter'd, and blafphem'd for fame.
The first in brothels with their punk and Muse;
Your toast, ye bards? 'Parnassus and the stews!'
Thank heaven, the times are chang'd; no Poet now
Need roar for Bacchus, or to Venus bow,
'Tis our own fault if Fielding's lash we feel,
Or, like French wits, begin with the Bastile.

Ev'n, in those days, some sew escap'd the sate, By better judgment, or a longer date, And rode, like buoys, triumphant o'er the tide. Poor Otway in an ale-house dos'd, and dy'd! While happier Southern, tho' with sports of yore, Like Plato's hovering spirits, crusted o'er, Liv'd every mortal vapour to remove, And to our admiration, join'd our love.

Light lie his funeral turf !- For you, who join His decent manners to his art divine, Would ye (whilft, round you, tofs the Proud and Vain Convuls'd with feeling, or with giving pain) Indulge the Muse in innocence and ease, And tread the flowery path of life in peace? Avoid all authors, -" What ! th' illustrious Few, Who flunning Fame have taught her to pursue Fair Virtue's heralds ?"-Yes, I say again, Avoid all authors, 'till you've read the men. Full many a peevish, envious, slandering elf, Is, in his works, Benevolence itself. For all mankind, unknown, his bosom heaves, He only injures those with whom he lives. Read then the Man: Does truth in actions guide, Exempt from petulance, exempt from pride? To focial duties does his heart attend, As son, as father, husband, brother, friend? Do those who know him love him? if they do, You've my permission, you may love him too.

But chief avoid the boist'rous roaring sparks,
The sons of fire!—you'll know them by their marks.
Fond to be heard they always court a croud,
And, tho' 'tis borrow'd nonsense, talk it loud.
One epithet supplies their constant chime,
Dama'd bad, damn'd good, damn'd low, and damn'd sublime!

Rin

But most in quick short rapartee they shine
Of local humour; or from plays purloin
Each quaint stale scrap which every subject hits,
'Till sools almost imagine, they are wits.
Hear them on Shakespear! there they soam, they rage!
Yet taste not half the beauties of his page,
Nor see that Art, as well as Nature, strove
To place him foremost in th' Aonian grove.
For there, there only, where the sisters meet,
His Genius triumphs, and the work's compleat.

Or would ye fift more near these sons of fire,
'Tis Garrick, and not Shakespear, they admire,
Without his breath, inspiring every thought,
They ne'er perhaps had known what Shakespear wrote.
Without his eager, his becoming zeal,
To teach them, tho' they scarce know why, to feel,
A crude unmeaning mass had Johnson been,
And a dead letter Shakespear's noblest scene.

I'm no enthusiast, yet with joy can trace
Some gleams of sun-shine for the tuneful race.
If Monarchs listen when the Muses woo,
Attention wakes, and nations listen too.
The Bard grows rapturous, who was dumb before,
And every fresh-plum'd eagle learns to soar!

Friend of the finer arts, when Egypt faw Her fecond Ptolemy give science law, Each genius waken'd from his dead repose, The column fwell'd, the pile majestic rose, Exact proportion borrow'd strength from ease, And use was taught by elegance to please, Along the breathing walls, as fancy flow'd, The sculpture soften'd, and the picture glow'd, Heroes reviv'd in animated stone, The groves grew vocal, and the * Pleiads shone! Old Nilus rais'd his head, and, wond'ring, cry'd, " Long live the king! my patron and my pride! Secure of endless praise, behold, I bear My grateful suffrage to my sovereign's ear. Tho' war shall rage, tho' time shall level all, Yon colours ficken, and yon columns fall, Tho' art's dear treasures feed the wasting slame, And the proud volume finks, an empty name.

[•] The seven poets partronised by Ptolemy Philadelphus, are usually called by the name of that constellation.

Tho' Plenty may desert this copious vale, My streams be scatter'd, or my fountains fail, Yet Ptolemy has liv'd: The world has known A king of arts, a patron on a throne. Ev'n utmost Britain shall his name adore,

One rule remains. Nor shun nor court the great:
Your truest center is that middle state,
From whence with ease th' observing eye may go
To all which soars above, or sinks below,
'Tis yours all manners to have try'd, or known,
T'adopt all virtues, yet retain your own:
To stem the tide, where thoughtless crowds are hurl'd,
The firm spectators of a bustling world!

Thus arm'd, proceed: The breezes court your wing;
Go range all Helicon, taste every spring;
From varying nature cull th' innoxious spoil,
And, whilst amusement sooths the generous toil,
Let puzzled critics with suspicious spite
Descant on what you can, or cannot write;
True to yourselves, not anxious for renown,
Nor court the world's applause, nor dread its frown.
Guard your own breasts, and be the bulwark there,
To know no envy, and no malice fear.
At last you'll find, thus stoic-like prepar'd,
That verse and virtue are their own reward.

The Descent to the Vault in Clerkenwell; from the GEOST; a Poom.

By Mr. Churchill.

ARK was the night; it was that hour, When Terror reigns in fullest pow'r, When, as the learn'd of old have faid, The yawning grave gives up her dead, When Murder, Rapine by her fide, Stalks o'er the earth with Giant ftride; Our Quixotes (for that Knight of old Was not in truth by half to bold, Though Reason at the same time cries Our Quixotes are not half so wife, Since they with other follies boaft An expedition 'gainst a Ghost) Through the dull deep furrounding gloom In close array tow'rds Fanny's tomb Adventur'd forth - Caution before With heedful step the lantborn bore,

Pointing at graves, and in the rear,
Trembling, and talking loud, went Fear.
The church-yard teem'd—th' unfettled ground,
As in an ague, shook around;
While in some dreary vault confin'd,
Or riding in the bollow wind,
Horror, which turns the heart to stone,
In dreadful sounds was heard to groan.
All staring, wild, and out of breath,
At length they reach the place of death.

A vault it was, long time applied
To hold the last remains of pride:
No beggar there, of humble race,
And humble fortunes, finds a place;
To rest in pomp as well as ease,
The only way's to pay the sees.
Fools, Rogues, and Whores, if rich and great,
Proud e'en in death, here rot in state.
No thieves disrobe the well-drest dead,
No plumbers steal the sacred lead,
Quiet and safe the bodies lie,
No Sextons sell, no Surgeons buy.

Thrice each the pond'rous key apply'd, And thrice to turn it vainly try'd, Till taught by Prudence to unite, And straining with collected might, The stubborn wards resist no more, But open slies the growling door.

Three paces back they fell amaz'd, Like flatues stood, like madmen gaz'd. The frighted blood forsakes the face, And seeks the heart with quicker pace; The throbbing heart its sears declares, And upright stand the bristled hairs; The head in wild distraction swims; Cold sweats bedew the trembling limbs; Nature, whilst sears her bosom chill, Suspends her pow'rs, and life stands still.

Thus had they stood till now, but Shame (An useful, though neglected dame, By heav'n design'd the friend of man, Though we degrade her all we can, And strive, as our first proof of wit, Her name and nature to forget) Came to their aid in happy hour, And with a wand of mighty pow'r Struck on their hearts; vain fears subside, And bassled leave the field to Pride.

Test O

Shall they (forbid it Fame) shall they
The dictates of vile fear obey?
Shall they, the idols of the town,
To bugbears famey-form'd bow down?
Shall they, who greatest zeal exprest,
And undertook for all the rest,
Whose matchless courage all admire,
Inglorious from the task retire?
How would the wicked ones rejoice,
And Insidels exalt their voice,

" Perish the thought! though to our eyes

" In all its terrors Hell should rise,

"Though thousand ghosts in dread array,

"With glaring eye-balls cross our way,
"Though Gaution trembling stands aloof,
"Still will we on, and dare the proof."

They faid, and without farther halt, Dauntless march'd onward to the wault.

What mortal men, who e'er drew breath, Shall break into the house of Death With foot unballow'd, and from thence The myst'ries of that state dispense, Unless they with due rites prepare Their weaker fense, such fights to bear, And gain permission from the state, On earth their journal to relate? Poets themselves, without a crime, Cannot attempt it e'en in rbime, But always on fuch grand occasion, Prepare a folemn invocation, A poly for grim Pluto weave, o les mentrals And in smooth numbers ask his leave. But why this caution? why prepare Rites needless now, for thrice in air The Spirit of the night hath Incex'd, And thrice hath clapp'd his wings well pleas'd.

Descend then, Truth, and guard my side,
My Muse, my Patroness, and Guide!
Let others at invention aim,
And seek by fallities for fame;
Our story wants not at this time,
Flounces and furbelows in rhime:
Relate plain sacts; be brief and bold;
And let the Poets, sam'd of old,
Seek, whilst our artless take we tell,
In vain to find a Paralles:

Silent all three went in, about
All three turn'd fileut, and came out.

The COUNTRY of FAMINE. From the Prophecy of FAMINE.

A poem. By the Same.

FAR as the eye could reach, no tree was feen, Earth, clad in ruffet, fcorn'd the lively green. The plague of locusts they secure defy, For in three hours a grashopper must die. No living thing, whate'er its food, feafts there, But the cameleon, who can feast on air. No birds, except as birds of passage slew, No bee was known to hum, no dove to coo. No streams as amber smooth, as amber clear, Were seen to glide, or heard to warble here. Rebellion's fpring, which through the country ran, Furnish'd, with bitter draughts, the steady clan. No flow'rs embalm'd the air, but one white rofe, Which, on the tenth of June, by inflinct blows, By inftinct blows at morn, and, when the shades Of drizly eve prevail, by instinct fades.

The CAVE of FAMINE. From the Same poem.

ONE, and but one, poor folitary cave, Too sparing of her favours, nature gave; That one alone (hard tax on Scottish pride) Shelter at once for man and beaft supplied. Their snares without entangling briars spread, And thiftles, arm'd against th' invader's head, Stood in close ranks all entrance to oppose, Thistles now held more precious than the role. All creatures, which on nature's earliest plan, Were form'd to loath, and to be loath'd by man, Which ow'd their birth to nastiness and spite, Deadly to touch, and hateful to the fight, Creatures, which, when admitted in the ark, Their Saviour shung'd, and rankled in the dark, Found place within; marking her noisome road With poison's trail, here crawl'd the bloated toad; There webs were spread of more than common fize, And half-starv'd spiders prey'd on half-starv'd flies; In quest of food, efts strove in vain to crawl; Slugs, pinch'd with hunger, imear'd the flimy wall; The cave around with hisling sepents rung, On the damp roof unhealthy vapour hung, And FAMINE, by her children always known As proud as poor, here fix'd her native throne.

Le general d'estres pagne estre de ODE to Duke HUMPHRY.

the the came take the

Imitated from HORACE, Lib. I. Ode 25. Parcius junctes, &c. the district as how entitled

MIHERE are the crowds we faw before? No flatt'rers now befrege your door, None to your smiles aspire; Your porter once fo briffe in place,
So bufy, buffling like your grace,
May with your grace retire.
II.

The promise-fed, deluded throng, Who bow'd fo low, who bow'd fo long,

And at your levees waited— And at your levees waited—
Commons and peers alike are gone,
Your very bishops too are flown,
To G____e, to be translated. III. Ministry

When age comes on, and business fails, The cast off harlot weeps and rails,
Yet still would fain be cooing;
To bring new lovers to her arms,
Ogles, cognets, repairs her charms,
Old women will be doing. TANK TO THE TEN

So you still smirk and nod the head, But all in vain, — your charms are fled, The tongue of Flatt'ry ceases; In vain you strive to raise a slame, Though past the pow'r, you love the game-With age defire increases. Annual Vani and and O I O II A S

All to St. Ja---'s now repair, or another mound tall Where Virtue with her modest air Each raptur'd bosom fires She never jilts, the ne'er betrays, But always means the thing the fays, And love and joy inspires VL

With native charms in blooming youth,
With spirit, gentleness, and truth,
All strive to woo and win her;
While While, to your batter'd person cold, They fcorn the arts of one so old, So impotent a finner.

VII. You

VII.

You op'ning rose, secure from blight, Will charm the sense, attract the fight, And throw its sweets about.

While sapless wood but makes a blaze, Which boys attend with loud huzzas, And then in smoke goes out.

Portrait of JOHN, Earl Granville. By the Honourable H. W.

Ommanding beauty, smooth'd by chearful grace, Sat on the open features of his face : Bold was his language, rapid, glowing, firong, And science flow'd spontaneous from his tongue. A genius, seizing systems, slighting rules, And void of gall, with boundless scorn of fools. Ambition dealt her flambeau to his hand, And Bacchus sprinkled fuel on the brand, His wish to counsel monarchs, or controul; His means—th' impetuous ardour of his foul: For, while his views outstript a mortal span, Nor prudence drew, nor craft pursu'd the plan. Swift fell the scaffold of his airy pride, But, flightly built, diffus'd no ruin wide. Unhurt, undaunted, undisturb'd he fell, Could laugh the fame, and the fame stories tell: And more a fage than he, who bad await His revels, till his conquests were compleat, Our jovial statesman either sail unfurl'd, And drank his bottle, tho' he miss'd the world!

STANZAS to the Right Hon. C. T-, Efq; By a Friend.

BEHOLD that ship in all her pride,
Her bosom swelling to the tide,
Each curious eye delighting;
With colours slying, sails unfurl'd,
From head to stern she'll match the world
For sailing, or for sighting.
Alas, dear Charles, she cheats the sight:
Though all appears so fair and tight,
For sea so trim and ready;
Each breeze will toss her to and fro,
Nor must she dare to face the soe,
Till ballast makes her steady.

EPITAPH for Mrst Meyrick, the Wife of Dr. Richard Meyrick; Who died in Child-birth, November, 1741.

Written by Dr. TEMPLEMAN.

Emilius and Sophia: or, a new Syftem of Education. Translated from the French of J. J. Rousseau, Citizen of Geneva.

THE fault most generally observed in discourses upon education, is a tendency to common place. Nothing, in fact, can bemore trite, than the greatest part of the observations, which have been retailed upon that subject from Quintilian down to Monfieur Rollin. This is however the fault, into which the ingenious author of Emilius is, of all others, in the least danger of falling. To know what the received notions are upon any subject, is to know with certainty what those of Rousseau are not. In his treatife on the inequality amongst mankind, he has shewo his man in a natural state; in his Emilius he undertakes to educate him. In the prolecution of this design he begins early, and carefully attends his pupil from his cradle to his marriage; bed. He forms him to morals, to science, to knowledge of men, and to manual labour, and at length gives him a wife, whom he has previously educated for him according to ideas, a little different from that model which he had formed in his Eloife.

In this System of Education there are some very considerable parts that are impracticable, others that are chimerical; and not a few highly blameable, and dangerous both to piety and morals. It is easy to discern how it has happened.

that this book should be censured as well at Geneva as in Paris. However with those faults in the defign, with the whimfies into which his paradoxical genius continually hurries him, there are a thousand noble hints relative to his subject, grounded on a profound knowledge of the human mind, and the order of its operations. There are many others. which, though they have little relation to the subject, are admirable on their own account; and even, in his wildest fallies, we now and then discover strokes of the most folid fenfe, and instructions of the most useful nature. Indeed he very feldom thinks himself bound to adhere to any fettled order or defign, but is borne away by every object flarted by his vivid imagination; and hurries continually from fystem to fyllem in the career of an animated, glowing, exuberant flile, which paints every thing with great minutenels, yet with infinite spirit.

There is, it must be acknowledged, one considerable desect in his judgment, which infects both his matter and his stile. He never knows where to stop. He seldom can discover that precise point in which excellence consists, where to exceed is almost as bad as to fall short, and which every step you go beyond, you grow worse and worse. He is therefore frequently tiresome and disgusting by pushing his notions to excess; and by repeating the same thing in a thousand different ways. Poverty can hardly be more vicious than such an abundance. To give the

Q2

reade

An

reader fome idea of this most extraordinary performance, we shall felect three passages; the first relabood; the second after a greater progress has been made; and the last containing fomething concern-

ing the education of women.

Almost every method has been tried but one, and that the only one which can focceed, natural liberty duly regulated. No one ought to undertake the education of a child who cannot conduct him at pleafure, who cannot conduct him at pleasure, merely by the maxims of possibility and impossibility. The sphere of both being equally unknown to infancy, it may be extended or contracted as we please. A child may be equally excited or re-drained, by the single plea of necessity, without murniuring; he may be rendered plant and docide by the force of circumstance only, without ever giving occasion to sow the out ever giving occasion to low the steeds of vice in his steart: for the passions will never be livitated to long as they must be exerted without effect. Give your pupil no kind of verbal instructions; he should receive mone but from experience: inflict on him no kind of punish-ment, for he knows not what it is to be in fault: require him never to alk pardon, for he cannot offend you. As he is intentible of all moral obligation, he cannot do any thing morally evil, or that is deferving of punishment or reprimand.

I foresee the reader will be al-

ready frightened, if he judges of fich a child by his own; in this, however, he is militaken. The conyour pupils, irritates their vivacity; the more they are reftrained under are when they escape from it; they mult indemnify themselves, when

they can, for that fevere confinement you impose on them. Two scholars, broke loofe from a school in town, will do more mischief in a country village than all the boys in the parish. Shut up one of these young gentlemen with the fon of a peafant of the fame age; and the first will have broke or turned all the moveables in the room topfy turvy, before the latter should have ftirred from his feat. What can be the realon of this, if the one be not in a hurry to abuse his momentary liberty, while the other, accustomed to freedom, is not in any hafte to make use of it. And yet the children of peafants, being frequently homoured and thwarted, are very far from being in that order in which I could with to fee yours!

Let as lay it down as an inconteffible maxim, that the first emotions of nature are always right: there is no original perverfity in the human heart. I will venture to fay, there is not a fingle vice to be found there, that one could not fay how and which way it entered. The only puffion natural to man as the love of himself, or felf-love taken in an extensive sense. This passion, confidered in itself, or as relative to us; is good and weeful, and, as it has no necessary relation to any one elic, it is in that respect naturally indifferent; it becomes good or evil, therefore, from our application of it, and the feveral relations we give it. Till the guide of felf-love, then, which is reason; appears; a child should do nothing merely because he is seen or heard, nothing from causes merely relative to others, but only their things which nature requires and infligates; and then he will never do wrong: Trend az more

I don't mean that he will never do any mischief, that he will never hurt

himfelf,

bimiels, or perhaps break in pieces a valuable utensil that may happen to be unluckily placed within his reach. He may do a great deal of harm without doing ill; because the evil of the action depends on his intention to do an injury, and he will be always free from such intention. Should he not, and should he once acquire an evil intention, he is already spoiled; he is vicious almost beyond remedy.

An action may be evil in the eyes of avarice, that is not so in those of reason. In leaving children at full liberty to play about as they please, it is proper to remove every thing out of their way that may render their agility or wantonness expenfive; thus nothing that is brittle and coffly should be left within their reach. Let the furniture of their apartment be coarse and solid : let them have no looking-glass, no china, nor other objects of luxury, As to my Emilius, whom I educate in the country, his chamber hall have nothing in it, whereby it may be diffinguished from that of the meanest peasant. To what purpose should it be carefully ornamented, when he is to flay in it fo thort a time? But I forget; he will himself decorate it after his own fancy; wehall fee presently in what manner.

If, notwithstanding your precaution, your child should commit some disorder, or break some piece of furniture, don't go to punish or rate him for your own negligence; don't let him hear from you a single word of reproach; let him not even perceive you are displeased; but ast exactlyin the same manner as if it had been broke by accident; in a word, you may think you have effected a great point, if you can prevail on yourself to say nothing about the matter.

any mischief, that he will never har

May I venture here to lay down the greatest, most important, and most useful rule of education? It is this, not to gain time, but to lose it. The generality of readers will be fo good as to excuse my paradoxes; there is an absolute necessity for them, when we make reflections: and, fay what you will, I had rather be remarkable for hunting after a paradox, than for being misled by prejudice. The most critical interval of human life is that between the hour of our birth and twelve years of age. This is the time wherein vice and error take root, without our being possessed of any instrument to destroy them: and when the implement is found, they are so deeply grounded, that they are no longer to be eradicated, If children took a leap from their mother's breaft, and at once arrived at the age of reason, the methods of education now usually taken with them would be very proper; but, according to the progress of nature they require those which are very different. We should not tamper with the mind, till it has acquired all its faculties: for it is impossible it thould preceive the light we hold out to it while it is blind; or that it should pursue, over an immense plain of ideas, that route which reason hath so slightly traced, as to be perceptible only to the harp-

The first part of education, therefore, ought to be purely negative. It consists, neither in teaching virtue nor truth; but in guarding the heart from vice and the mind from error. If you could be content to do nothing yourself, and could prevent any thing being done by others; if you could bring up your pupil healthy and robust to the age

nutt ledeunity themson, & Danen

twelve years, without his being able to diffinguish his right hand from his left; the eyes of his understanding would be open to reason at your first lesson: void both of habit and prejudice, his passions would not operate against your endeavours; and he would become under proper instructions the wifest of men. It is thus, by attempting nothing in the beginning, you might produce a

prodigy of education.

Take the road directly opposite to that which is in use, and you will almost always do right. As we think it not enough children should be children, but it is expected they should be masters of arts; so fathers and preceptors think they can never have too many checks, corrections, reprimands, menaces, promifes, instructions, fair speeches, and fine arguments. You will act wifer than all this, by being reasonable yourself, and never arguing with your child, particularly in striving to reconcile him to what he dislikes; for to use him to reason only upon disagreeable subjects, is the way to disgust him, and bring argument early into discredit with a mind incapable of understanding it. Exercise his corporeal organs, fenles, and faculties, as much as you please, but keep his intellectual ones inactive as long as possible. Be cautious of all the fentiments he acquires previous to the judgment, which should enable him to scrutinize them. Prevent or re-Arain all foreign impressions; and, in order to hinder the rife of evil, be not in too great a hurry to inftil good: for it is only such when the mind is enlightened by reason. Look upon every delay as an advantage; it is gaining a great deal to advance without loning any thing; let the infancy of children therefore have time to ripen. In short, whatever

instruction is necessary for them, take care not to give it them today, if it may be deferred without

danger till to-morrow.

Another confideration which confirms the utility of this method, is the particular genius of the child, which ought to be known before it can be judged what moral regimen is best adapted to it. Every mind hath its peculiar turn, according to which it ought to be educated; and ·it is of very material confequence to our endeavours, that it be educated according to that turn, and not to any other. The prudent governor will watch a long time the workings of nature, will observe his pupil well before he speaks the first word to him: leave then his natural character at liberty to unfold itself; lay it under no restraint whatever, that it may be the better laid open to view. Do you think the time loft in which a child is thus left at liberty? Quite the contrary: it will be thus best employed: for, is it not thus you yourfelf learn to husband time fill more precious? If you let about any thing, before you know in what manner to act, you proceed at random: liable to mistake, you are frequently obliged to undo what is done; and find yourselves farther from the end defigned, than if you had been less precipitate to begin the work. Act not the miler, who loses much because he is unwilling to lose a little; but facrifice in infancy that time which you will regain with usury in a more advanced age. A prudent physician does not go blundering to prescribe, at first fight of the fick; he enquires first into the temperament and circumstances of the patient, and then adapts his prescription to them: he begins late to administer his remedies,

ledies,

But where, will it be faid, must we place an infant thus to be educated as an infenfible being, as a mere automaton? Shall we take him to the world in the moon, or to some defart island? Shall we separate him from the rest of his species; will he not, if in the world, have before him continually the prospect and example of the passions of others? Will he never meet in company with children of his own age? Will he not fee his parents, his neighbours, his nurse, his governefs, his fervant, and at last his overnor himself, who after all will be no angel? This objection is reafonable and folid. But have I told you the natural education of a child was an easy undertaking? Is it my fault, ye men of fociety! that you have made every thing which is right fo difficult to be put in execution? I perceive the difficulties, I acacknowledge them; and perhaps they are infurmountable. It is, however, certain, that, by endeavouring to obviate them, we may succeed to a certain degree. I only take upon me to point out the end we should aim at: I don't affirm it is possible to reach it; but I affirm that he, who approaches the nearest this end, hath succeeded the best,

One thing, however, is to be remembered; and that is, before any one undertakes to form a man, it is proper he should be formed such himself; it is proper he should find in himself the model he proposes to imitate. While a child is as yet without knowledge, there is time to prepare every thing that approaches him, and to introduce to his first observations those objects which are proper for him to

fee. Render yourfelf respectable to all: begin by making yourfelf beloved, so shall every one be defirous to please you. You will never be master over your pupil, if you are not mafter of all those about him: nor will your authority be of any service, if it be not founded on virtuous esteem. It will be to no purpose to empty your purse, or give your money away by handfuls; I never knew money make any one beloved. It is doubtless wrong to be covetous and niggardly, and to content ourselves with lamenting the miserable objects we might relieve; but you may in vain open your coffers; if you do not allo open your heart, the hearts of others will remain still thut against you. It is your time, your care, your af-fections, it is yourfelf you must give; for otherwise do what you will, it will always be remarked that your money is not you. There are inflances of concern and benevolence which have a greater effect, and are really more uteful than all pecuniary gifts. How many of the unfortunate, and of the fick, have more need of confolation than alms! How many are there of the oppressed whom protection would serve more than money! Reconcile those who are at variance, prevent lawfuits; bring children to a fense of their duty, and parents to that of indulgence; promote happy marriages; oppose oppression; not the credit and interest of your pupil's family, in favour of the poor and helpless to whom justice is refuled, or whom wealth overpowers. Declare yourself boldly the protector of the unhappy. Be juft, humane, and beneficent. Do not only give alms, but perform the deeds of charity. Acts of mercy and compation relieve more evils

money. Love others, and they will love you; ferre them, and they will e you, be a father to them, and

they will be your children.

Here presents itself, also, another reason for educating Emilius in the country, at a distance from the mob of fervants, who, excepting their matters, are the vileft of mankind; at a distance from the detestable manners of the town, which are varnished over so speciously as to become feductive and contagious to children; whereas the vices of the pealants, grofs and without difwife, are more apt to difgust than duce such as are not interested in experients to contrational xa

Besides this, a tutor would, in matter over the objects that might be presented to his pupil; his reputation, his discourse, his example, would carry with them an authority, that would not accompany them in town. By rendering himfelf generally useful in his neighbourhood, every one would be eager to oblige Min to merit in fetura his efteem, "and to appear before his pupil fuch as he himfelf in fact would with; and the they should not be corrected futing your lang a show wat at of their vices, they would abitain sal Ye zealous tutors, be plain, therefrom giving the public scandal by them; which is all that is required for our present purpose. 311 3

Forbear to charge your own faults on others : children are less corrupted by the ill examples they fee, than by the wrong precepts you teach them. Always moralizing, fentenflous and pedantic, for one idea that you give them, thinking it a good one, you infill at the fame for nothing full of what palles in your own head, you fee not the effect it produces in those of your

papils. A midit that profusion of words, with which you confound and weary them out in your fermons, do you think there are none whose meaning they take wrong? Do you think they do not make their own comments on your diffuse explications, and that they do not find means to patch up a little fystem of their own, to oppose to yours as occasion offers?

Liften but to one of these young gentlemen who have been thus lectured; let him talk, afk questions, and run on at pleafure; you will be furprized to find what a ftrange turn your fine reasonings have taken in his mind: he confounds all you have faid, perverts every thing; he will tire out your patience, and almost distract you by unforeseen and unthought-of objections. Thus will he reduce you to filence; or oblige you to impose filence on him; and what can he think of the filence of a man who loves talking fo much? If once he gains this advantage, and is fenfible of it, adieu to education; all is at an end at once; he will ho longer feek opportunities to in-Aruct himfelf, but the means of re-

33

fore difcreet and referved be sever in hafte to act, unless it be to prevent the action of others. A. gain, I repeat it, defer your good instructions, if possible, for fear of inculcating bad ones. This earth was conflicuted by nature to be the first paradife of man; beware of acting the part of the tempter, in corrupting innocence by the knowledge of good and evil. As you cannot prevent children from instructing themselves by external examples, confine your folicitude to the imprinting those examples on

their minds in the form belt adapt-

Violent passions produce a great effect on a child who is witness of them, because their marks are firiking and command attention. Anger, in particular, is fo boilterous in its expressions; that it is impossible not to perceive it when near at hand You will ask, perhaps, if this does not afford a fine opportunity for a pedagogue to make an excellent discourse, No. No excellent discourse at all a not a word should be faid on the occasion. Let the child only be a witness to the foene he will be too much furprized at the fight not to alk you the meaning of it. Your answer is yery fimple; and naturally arifes from the very objects that firike his senses. He sees an inflamed countenance, sparkling eyes, menacing gestures; he hears violent exclamations ; all figns that the body is out of order. Tell him therefore, feriously, and without appearance of affectation, the poor man is taken suddenly ill; that he is seized with a fit of an ague. You may hence take occasion to give him, in few words, a general notion of difeates and their effects: for thefe depend immediately on nature, and form one of those chains, by which he should perceive himself bound to the immoveable weight of necellity." Volei p. 132 ornorfin

making constant efforts to display its abilities, succeeds that of the mind, as constantly seeking after information. Children, when very young, seem endowed only with a capacity and inclination for motion; they afterwards become inquisitive and curious, and this curiosity, well directed, becomes, at the age they

have now attained, their chief fpring of action, Let us be always careful to diftinguish thole, propentities which are implanted by nature, from those which are ingrafted by the dictates of prejudice and opinion. A thirst after knowledge may proceed merely from the vanity of defiring, to be thought learned; it may also arise from that cariosity, which naturally excites us to enquire after every thing, in which we may be either directly or indirectly intere ed. Our innate defire of happinels, and the impossibility of our fully gratifying that defire, are the cause of our conftant researches after new expedients, to contribute to that end.

This is the first principle or motive of curiofity; a principle which is natural to the heart of man, but which displays itself only in obedience to our passions, and in proportion to our acquirements of knowledge. Let us suppose a philosopher cast ashore on a desart illand, together with his books and instruments, and that he was under an absolute certainty of spending in that folitude the remainder of his days. He would never trouble himfelf farther about the system of the universe, the laws of attraction, or the fluctionary calculus. It is probable he would never after look in a book, during his whole life; but he certainly would not fail to explore the island, however extensive, even to its remotest corners, Let us, therefore, in our early fludies, reject those sciences for which man has not a natural turn, and confine ourselves to those which instinct directs us to purive do vinegui omit

This earth is the island on which mankind are cast, and the most striking object of their observation

is the fun. As foon as our ideas begin to extend beyond ourselves, our attention will therefore naturally be engroffed between two fuch interesting Subjects. Hence the philosophy of almost every savage nation is confined folely to the imafinary divisions of the earth, and the divinity of the fun. "What an excursion! cries the reader. We were but just now employed about objects that immediately furround us, and we are now traverling the globe, and foaring to the diffant extremities of the universe." This excursion, however, is the simple ries, and of the bent of our understanding. During our infant state of weakness and incapacity, all our shoughts, influenced by felf-prefervation, are confined within ourfelves. On the contrary, in a more advanced age, as our abilities increase, the defire of improving our existence carries us out of ourselves, and our ideas extend to their utmost limits. As the intellectual world. however, is as yet unknown to us, our thoughts cannot extend farther than we can fee; but our comprehension dilates itself with the bounds of space.

Let us convert our fensations into ideas; but let us not fly at once from sensible to intellectual objects. It is only by a due and rational attention to the former we can attain the latter. In the first operations of the understanding, let our senses then always be our guide, the world our only book, and facts our sold precepts. Children, when taught to read, learn that only; they never think; they gain no information; all their learning con-

docated his chrienty, o

fifts in words.

gaibsel .

Direct the attention of your pupil to the phenomena of nature, and you will foon awaken his curiofity; but to keep that curiofity alive, you must be in no hatte to fatisfy it. Put questions to him adapted to his capacity, and leave him to refolve them. Let him take nothing on truft from his preceptor, but on his own comprehension and conviction: he should not learn, but invent, the sciences. If ever you substitute authority in the place of argument, he will reason no longer; he will be ever afterwards bandied like a shuttlecock between the opinions of others.

You intend, we'll suppose, to teach your child geography, and for that purpose provide for him maps, spheres, and globes. What an apparatus! wherefore all these mere representations of things? why do you not rather begin by shewing him the object itself, that he may, at least, know what it is you are

talking about?

Walk out with him, fome fine evening, to a convenient spot, from whence an extensive horizon may give you a full view of the fetting fun; and then take particular notice of fuch objects as mark the place of its going down. Return the next morning, with a professed defign only of taking the fresh air, to the same place, before the sun rifes. There you will find the fiery rays, it fcatters among the clouds, as harbingers of its approach. illumination increases, the east feems all in flames, and you expect the glorious orb long before it difcovers itself above the horizon; you think you see it every moment; it at length appears. Its rays dart like lightning o'er the face of na-

ture, and darkness vanishes at the fight. Man glorics in his habitation, and fees it embellished with new beauty. The lawn is refreshed by the coolness of the night, and the light of the morn displays its increasing verdure: the dew-befpangled flowers that enamel its furface glitter in the fun-beams, and, like rubies and emeralds, dart their colours on the eye. chearful birds unite in choirs, and hail in concert the parent of life: not one is filent, at this inchanting moment none are mute; though in feeble notes, more flow and fost than those they chaunt all day, as if from peaceful flumbers scarce awoke, they join in languid har-mony. The affemblage of so many pleasing objects imprints a glowing fensation that seems to penetrate the foul. Who can withitand the rapture of this short interval of enchantment? it is impossible fo grand, fo beautiful, fo delightful a scene can be ever beheld with indifference. Full of that enthusiaftic rapture, with which a preceptor is inspired on such an occasion, he endeavours perhaps to communicate it to his pupil; he expects to excite the fame emotions in the child, by attracting its attention to those sensations which he experiences within himself. Ridiculous expectation! it is the heart only that contemplates the beauties of nature: to be feen, they should be always felt: a child indeed may perceive the several objects, their connection is to him invisible; he is infentible to the harmony of the spheres. He requires an experience, which he hath not yet attained, and fentiments to which he is as yet a stranger, to be susceptible of that complex impression which is

the general result of all these sensations. If he has not travelled over defarts; if his feet have never been parched by burning fands; if he never hath felt the fcorching funbeams reflected from the furround ing rocks, how can he tafte the fresh air of a fine morning? How should he be enraptured with the fragrance of the flowers, the refreshing verdure of the grass, the dew-drops sparkling in the sun, or the foft carpet of the downy mois? How should the warbling of birds inspire him with glowing raptures, who is a stranger to the fost accents of love and delight? How can he behold with transport the dawn of so lovely a day, whose imagination cannot paint to itself the joys it is capable of beflowing? In a word, what tender fensations can be excited by the charms of nature, in him, who is ignorant by whole hand she is so beautifully adorned? Talk not to children in a language they do not comprehend; make use of no pompous descriptions, no flowers of speech, no tropes and figures, no poetry; talte and fentiment are at present quite out of the question: fimplicity, gravity and precision are all that are yet required: the time will come, but too foon, when we must assume a different flyle.

A pupil educated agreeable to these maxims, and accustomed to receive no assistance till he has discovered his own inabilities, will examine every new object with a long and silent attention. He will be thoughtful without asking questions. Content yourself, therefore, with presenting proper objects opportunely to his notice; and when you see they have sufficiently excited his curiosity, drop some

leading

leading laconic questions, which may put him in the way of discover-

my the truth,

On the prefent occasion; having for fome time contemplated the rifing fun, and made your pupil observe the hills and other neighboaring objects on that fide, permitting him the while to talk about them without interruption, stand filent a few moments and affect a profound meditation. You may then address him thus: "I am thinking that, when the fun fet " last night, it went down yonder behind as : whereas, this mornor ing, you fee, he is rifen on the opposite side of the plain, here, before us. What can be the meaning of this? Say nothing more; and, if he asks you any thing about it, divert his attention, for the prefent, by talking of fomething elfe. Leave him to reflect on it himself, and be affored he will think of your observation.

Te accustom a child to give attention to objects, and to make fentible truths appear striking to his imagination, it is necessary to keep him some time in suspense before they are explained or discovered to him. If he should not fufficiently comprehend the nature of the prefent question by the means proposed, it may be rendered still more obvious, by divertifying the terms of it. If he cannot comprehend in what manner the fun proceeds from its fetting to its rifing, he knows at least how it proceeds from its riling to its fetting; he hath ocular information of this. Explain the first question, then, by the fecond, and if your pupil be not extremely dull indeed, the analogy is too obvious to escape him.

Such is our first lecture in cos-

mography." Vol. ii. p. 8.

aver I have already observed, that the duties of their fex are more eafily known than practifed. The first thing they should learn, is to be in love with their duty from a principle of interest; which is the only means to render it easy. Every station and every age has its peca. liar duties, We are easily acquainted with them, provided we do but love them. Respect your condition as a woman, and whatever station providence thinks fit to allot you, you will always be a woman of virtue. The essential point is to be what nature formed us; we are always too propense to be what the the mind of men diw bluow blow

Researches into abstract and specolative truthe, the principles and axioms of feiences, in thort, whatover tends to generalize our ideas, is not the proper province of women; their studies should be relative to points of practice; it belongs to them to apply those principles which men have discovered; and it is their part to make observations, which direct men to the effabliffment of general principles. All the ideas of women, which have not an immediate tendency to points of duty, should be directed to the study of men, and to the attainment of those agreeable accomplishments which have tafte for their object; for ar to works of genius, they are beyond their capatity : neither have they fufficient precilion or power of attention to fucceed in sciences which require accuracy: and as to phyfical knowledge, it belongs to those only who are most active, most inquisitive; who comprehend the greatest variety of objects; in thore, it belongs to those who have the strongest powers, and who exercise them most, to judge of the relations be-

tween fenfible beings and the laws of nature. A woman who is nature rally weak, and does not carry her ideas to any great extent, knows how to judge and make a proper estimate of those movements which he fets to work, in order to aid her weakness: and these movements are the passions of men. The mechanism she employs is much more powerful than ours; for all her levers move the human heart. She maft have the skill to incline us to do every thing which her fex will not enable her to do of berfelf, and which is necessary or agreeable to hers therefore the ought to fludy, the mind of man thoroughly, not the mind of man in general, abbrackedly, but the disposition of the men about her, the disposition of thole men to whom the is subject either by the laws of her country; on by the force of opinion. She fhould learn to penetrate into their real fentiments from their convertations, their actions, their looks and gefures. She hould also have the art, by her own conversation, actions, looks and geffures, to communicate those fentiments which are agrecable to them, without feeming to intend it Men will argue, more philosophically about the human heart of but women will read the heart of man better than they to It belongs to women if I may be allowed the expression, to form an experimental morality, and to reduce the fludy of man to a fyftem. Women have most wit, men have most genius, women observe, men reason; from the concurrence of both we derive the clearest light and the most perfect knowledge, which the human mind is, of itself, capable of attaining a in one word, from hence we acquire the most inmost, to judge of the relations bear

timate acquaintance both with our felves and others, of which our nature is capable; and it is thus that art has a conflant tendency to perfect thate endowments which nature has beltowed.

The world is the book of women; if they do not read well it is their own fault, or some passion. blinds them. Nevertheless, a true mistress of a family is not less recluse in her own house, than a nun in her convent. Therefore, before a young virgin is married we ought to act with regard to her, as they do, or at least ought to do. towards those who are to be confined in nunneries; that is, we should show them the pleasures they are to quit, before we fuffer them to renounce them, left the false idea. of pleasures to which they are strangers should milead their minds, and interrupt the felicity of their retirement. In France, young ladies live in nunneries, and wives go abroad in the world Among the antients, it was just the reverles, the maidens; as I have observed, were indulged with entertainments, and public festivals; but wives lived retired. This custom was more rational, and had a better tendency, to preferve morals.... A kind of coquetry is allowed to young girls who are unmarried; their grand concern is to amuse themselves. But wives have other employment at home, and they are no longer in pursuit of husbands; but such a reformation would not be for their interest, and unhappily they lead the fashion Mothers, however, make companions of your daugh ters i cultivate in them a just understanding and an honnst heart, and then hide nothing from them which a chafte eye may view with-Weraphy.

public lights, even theatres; every thing which, seen theatres; every thing which, seen improperly, delights indiscreet youth, may without danger be presented to the eye of prudence. The more they are conversant with these tumultuous pleasures, the sooner they will be discusted with them.

But I hear the clamour arifing against me! What girl is capable f refifting fuch dangerous examples? They have no fooner feen the world, than their heads are turned with every object; not one of them will refolve to quir it. Perhaps this may be the case; but before you have shewn them this deceifful picture, have you prepard them to viewit without emotion? have you acquainted them beforehand with the objects it represents? Have you described them such as shey really are? Have you armed them against the illusions of vanity? Have you inculcated into their tender minds a relish for true pleasures, which are not to be found in thefe rumultuous foenes ? What meafores, what precantions have you used to preserve them from that falle tafte which mileade them? So far from having opposed any principles against the prevalence of public prejudices, you have rather nourished them. You have prerioully made them enamoured with thole frivolous amnfements they meet with. You make them more in love with them, by affording them an opportunity of devoting themselves to them. Young girls, at their first entrance into the world, have feldom any other governess than their mother, who is often more filly than they, and who cannot flew them objects in any other light, than such in which they behold them themselves. Her exiample, more efficacious than reafon itself, justifies them in their own eyes; and the authority of a mother is an unanswerable plea for a daughter. When I propose that a mother should introduce her daughter to the world, it is upon the supposition that she will represent it to her such as it is.

Solon

Quæ

The evil begins still earlier, Convents are, in fact, schools of coquetry; not of that honest coquetry of which I have just spoken. but of that which produces all the extravagancies in women, and makes them the most ridiculous of all coquettes. When they quit the convents, to enter all at once into mixed affemblies, young girls find themselves where they could wish. They have been educated for fuch fociety, and is it to be wondered that they are fond of it? I am cautions of advancing what I am going to fay, for fear I should mistake a prejudice for an observation; but it feems to me that, generally speaking, in protestant countries, women have fronger attachments to their families, make more aminble wives and more tender mothers than in catholic countries; and if this be the case, there is no doubt but that the difference in partariles from the education at convents.

To love a tranquil and domestic life, we ought to be well acquainted with it; we should have experienced the sweets of it from our infancy. It is in the house of our parents that we must contract a relish for our own family, and every woman, whoh as not been educated by her mother, will not choose to bring up her own children. Unhappily private education is banished from great cities. Society is

become

become fo general and fo intermixed, that there is no afylum left for retirement, and we even live in public at our own houses. In confequence of affociating with all the world, we have no longer any family, and we fearce know our relations; we see them as strangers; and the simplicity of domestic manners is loft, together with that agreeable familiarity which conftitutes its principal charm. Thus we imbibe with our very milk a relish for the pleasures of the age, and of the maxims which prevail in the world, the world

Parents impose an outward refiraint on their daughters, in hopes to meet with dupes who will marry them from their appearance. But examine these young girls attenaffected air of constraint, they do but ill difquife the eager defires which prey upon them; and you may already read in their eyes their violent inclination to imitate their mothers. But they do not covet a hulband; they only long for the licence of matrimony. What occation can they have for a hulband, when they may have fo many lovers? But they stand in need of a husband as a cover to their intrigues . Modefty is in their looks, but licentionines in their hearts: That affected modesty is a lymptom of it. They affect it only to get rid of it the fooner. Ladies of Paris and London, pardon me, I entreat you! Miracles are not excepted in any place, but for my own part I am not acquainted with any; and if there be a

DOM LINE TOTAL

fingle individual among you who has a mind thoroughly virtuous, then I am a stranger to the manners of the times." Vol. iv. p. 73.

The doctrine of grace: or the office and operations of the Holy Spirit windicated from the infults of infidelity and the abuses of fanaticism: With some thoughts (humbly offered to the confideration of the established clergy) regarding the right method of defending religion against the attacks of either party. In three books. By William bishop of Gloucester.

WEAK friendship, in almost every circumstance, proves as noxious as falfe friendship; and falle friendship is without doubt the most dangerous kind of comity. This observation has never been more fully verified, than in the weak and the pretended friends of religion. fanatics and hypocrites. Their reasoning exposes it to the fcorn of infidels, as abfurd; their conduct raries a prejudice against it, either as a falle pretence, or an infufficient director of life. It is impossible for a man of real, that is, rational religion, to employ his time and abilities better than in discrediting jointly, as well those who openly attack that facred butwark, as those whose conduct and opinions expose it to such attacks. This is the professed intention of the work before us, on one of the most fundamental, the most valuable, and the most abused points in the Christian fystem. The learn-

The way of a man in his youth was one of the four things which the wife Solomon could not comprehend: the fifth was the impudence of an adultress, Que comedit, & tergens os suum, dicit; non sum operata malum. PROV.

send authorfice la fice and operations of the Holy, parit, and the true feripture-idea inspiration. This point effad. he fets up to fcorn and rididetha falle and pretended schemes sthodilts and other fanatics.

This work, like all others of the me author, is full of uncommon fearenes conducted by a remarkble spirit of lagacity and penetraa: an extreme subtility and rement appears in all his reasonisfactory, as being drawn from a mofound erudition, and a perfect nowledge of the ideas of the times countries; where the facred ten, of the oceaof writing them, and of the occa-tion between the old and the new meents. Where his reasonings of less consistion, they are, no shales, and, from the same cause, mayon agreeable and entertaining, is order to not so exact as to no order to not to exact as to exact as to exact his discussing several points, high has but slightly connected ith his principal subject. His items original and animated, but apt and anequal. Few books and with more lively fallies of wit and humour, for which the auor has unegminon abilities, and sich he fometimes finds it difficult to restrain, suffering them now and then to degenerate into too eat a degree of careleffnels and rection. We subjoin as a speciand the ludicrous, the fifth chapter of his first book,

34 Wormay observe that the Miniftry of the first preachers of the Coipel confifted of these two parts; The temporary and occasional Aractions of those Christians

whom they had brought to the knowlege of, and faith in, Jefus, the Melliah; 2. and the care of composing a WRITTEN RULE for the direction of the Church throughout all ages. Now it being granted, because, by the history of the Alls of the Apostles, it may be proved, that they were divinely inspired in the discharge of the temporary part, it must be very strong evidence indeed which can induce an unprejudiced man to fusped, that they were left to themselves in the execution of the other. Their preaching could only profit their contemporaries : For inftructions conveyed to future ages by Tradition are foon lott and forgotten; or, what is worle, polluted and corrupted with fables. It is reasonable therefore to think, that the Church was provided with a WRITTER God hath indeed made this provision. And the Scriptures of the New Testament have been received by all the Faithful, as divine Oracles, as the inspired dictates of the Holy Spirit, till Superflition extending the notion of infpiration to an extravagant height, over-cautious Believers joined with Libertines, (who had taken advantage of that folly) to deny or bring in question all infpiration whatfoever. For extremes beget each other; and when thus begotten, they are fuffered, in order to preferve the ballance of the moral System, as frequently to support as to destroy one another; that, while they sublist, each may defeat the mischiefs which the other threatens; and when they fall, both of them may fall together.

I shall therefore take upon me to expose the extravagance of either folly; and then endeavour to fettle

the TRUE NOTION OF SCRIPTURE

1. We have feen how fully gifted the Apollies were for the bufiness of their Miffion. They worked Miracles, they spake with Tongues, they explained Mysteries, they interpreted Prophecies, they discerned the true from the faile pretences to the Spirit: And all this for the temporary and occasional discharge of their Ministry. Is it possible, then, to suppose them to be deserted by this divine Inlightener when they fat down to the other part of their work; to frame a rule for the lasting fervice of the Church? Can we believe that that Spirit, which fo bountifully affilted them in their Assemblies, had withdrawn himself when they retired to their private Oratories: or that when their fpeech was with all power, their writings flould convey no more than the fallible dictates of human knowledge? To suppose the endowments of the Spirit to be fo capricionly bestowed, would make it look more like a mockery than a gift. And to believe all this would be a harder talk than what (the Deist tells us) our credulity imposes on us. No candid man, therefore will be backward to conclude, that what the Apostles had for the temporary use of their Ministry, they had, at least in as large a measure, for the perpetual fervice of the Church.

2. St. Paul, where he recommends the study of the Scriptures of the Old Testament to Timothy, expresly declares them to be inspired, in that general proposition, all Scripture is given by inspiration of God. Now if in the Mosaic Dispensation, the written Rule was given by inspiration of God, where the Church was conducted in every

step, at first by Oracular responses. and afterwards by a long feries and continued fuccession of Prophets; and all this under an extraordinar administration of Providence, such as might well feem to superfede the necessity of a scriptural inspiration's how confidently may we conclude, that the fame divine Goodness would give the INPALLIBLE CUIDE of an inspired Scripture to the Christian Church, where the miraculous influence of the Holy Spirit is supposed to have ceased with the Apostolic ages, and where the administration of Providence is only ordinary? Nor can it be faid, that what St. Paul predicates of Scripture must be confined to the Law, (whose very name indeed implies inspiretion) and what is prefatory to it; fince the largeness of his terms all Scripture, extends to the whole Canon of the Old Testament, as then received by the two Churches. And this general expression was the more expedient, as the biftoric wiltings did not either by their nature. like the prophetic, or by their name, like the legal, necessarily imply their coming immediately from God. The Canonical books of the Out Testament, therefore, being infpired, Reason directs us to expect the fame quality in the New. And as in the Old, amongst feveral occafional writings, there was the fundamental record, or the GREAT CHARTER of the Pentateuch; and in the Volumes of the Prophets, the Oracular predictions of the future fortunes of the Church, to the FIRST coming of the Mellish; fo. in the New, there is, befides the occasional Epistles, the authentic Record of GREAT CHARTER of the Gospel-Covenant; and in the Revelations of St. John, the fame di-

* Tim. iii, 16.

vine predictions continued to the second coming of the Saviour of the World.

he World on of the thing likewife supports us in concluding for this inspiration. An universal Rule f haman conduct implies as unlisited an obedience; the nature of such a Rule requiring it to be received entire; and to be observed every article. But when once it is supposed to come to us, tho' from Meaven, yet not immediately, but thro' the canal of an uninfpired insemment, liable to error both in the receiving and in the dispensing of it, men would be perpensily tempted to own just as much as, and so more than they liked to be-liare, or were dilpoied to practife; and to reject the rest as a mere human imposition. Nay the very reasons which the writers against this inspiration give us, why it is not afforded, feem to hew the nehey why it should; such as the feet knowledge that the Anation had of the genius of Christinity , their disputes and differences one apother; their miliakes in matters of easy prevention, tho of composers of a Rule of Faith for the aniverfal Church were thus nalinious knowledge, what fecurity could we have for their not milleading us in things of moment, unless presented by the guard and guichey engaged themselves in this im-

nefs and folly of that kind of rea-

foning which concludes from right to fact; and affumes, that because a thing is imagined to be expedient, useful, or necessary, in God's moral Government, that therefore he hath indeed made provision for it. Thus the Papal Doctors, in their arguments for the standing power of Miracles and the appointment of an infallible Guide, having endeavoured to shew that the first is necessary for those without, and the second for those without, and the second for those without, and the second for those within, would draw us to conclude with them, that the true Church hath, in fact, the exercise and the of miracles and reparallellative.

But the cases are widely different. It is by no means agreed, that the Church, after the Apofolic ages, was in the possession of to large a portion of the Holy Spirit FIRAD, OF Its MEMBERS, to exert the powers in question. Whereas it is confessed by all, that at the time thele Scriptures were written, the Compolers of them were divinily infpired for the occasional wet of the Ministry : And the only queltion in difpute is Whether that Spirit which aided them in defending the Gospel before the tribunals of Kings and Magistrates + - in working miracles before the multitude of Unbelievers and in prophecying and explaining Mysteris to the afferbolies of the faithful, whether this Spirit, I fay, did accompany, or defert them, when they retired within themfelves, to compole a RULE OF FATTH for the perpetual fervice of the Church! 4. But laftly, we have the clear

And when they bring you unto the Synagogues, and unto the Magistrates and Powers, take ye no thought how or what thing ye shall answer, or evilat ye shall say: for the Holy Ghost shall teach you in the same bour what ye ought to so. Luce. xii, 11. 12.

tellimony of Scripture for this ipspiration, And the the bearing twitness to it self might be reafonably objected in an argument addressed to Unbelievers, yet being here inforced against such of the Faithful who doubt or belitate concerning the inspiration of the New Tellament, it hath all the propriety we can defire.

grounding.

Leventure therefore to fay, that St. Paul, in the general proposition quoted above, which affirms that all Scripture is given by inspiration of Ged to necessarily includes the Scriptures in question; what it predicates of all Scripture taking in the new as well as the old; as well that which was to be written, as that which was already collected into a Canon, Cor the term, Scrippure, se the context leads us to understand is is general, and means, a religious Rule, perfect in its direction, for the conduct of human life, in belief and practices it being under this idea that he recommends the Scripturn to Timothy. The affertion therefore is poiver(al, and amounts to this is That divine Inspiration is an eliential quality of every Scripture which conflictes the LAW or Auts of a Religion coming from God." an affigal bos

On the whole then, we conclude, that all the Scriptures of the New Testament overs given by inspiration of God. And thus the prophetic promise of our blessed Master, that the Comforter should abide with us for ever, was emiently fulfilled. For the, according to the promile, his ordinary in fluence occasionally affists the Faithful of all ages, yet his conffant abode and supreme illu-

mination is in the facred Scriptures of the New Tellament."

After thewing the rules for the trial of spirits, he applies them to a famous modern pretender to extraordinary gifts of the fpirit.

" This the Reader should have in mind, when we bring him to apply these marks to the features of modern Fanaticism; especially as they are feen in the famed Leader of the METHODISTS, Mr. JOHN. WESLEY; and not feen neither, as Sancho Pancho fare his miffrels, by bearfay, (which indeed has been too much the cuftom, in the reprefentations of this transcendant man) but as he appears in perion in his own lounnais: For by those indelible marks alone, there traced out, and by his own pen, I purpole to TRY, in him, chiefly, THE SPE-RITS of all modern Pretenders to Supernatural Powers.

CHAP. IV. Book II.

A N D that I may not be suspected of combating a Fantom, it will be proper first of all to hew that this extraordinary man hath, in fact, laid claim to almost every Apollolic gift and grace; and in as full and ample a measure as they SHOPED L were possessed of old.

But as a good Actor will first prepare his Scene, he hath carried us back, by the magic of his dramatic powers, into all the wonders of the primitive Times; where we meet the Devil unchained and let loofe, to exert his last efforts against the new Religion: As, on the other hand, to oppose to his infernal rage, we fee, with the fame evidence, an abundant effusion of the Holy Spirit

est the Man If I bear witness of myself, my witness is not true. John v. 31. † Masa ypaşı dahareuses, &c. R 2

poured out upon this rifing Church: And now, every thing being well prepared; Both these Powers stand ready to act their parts, by the time our Apostle thinks sit to appear upon the Stage: anomow slads

fion,

But if Evil thus abounded, Grace did much more abound in this memorable Æra, when Mr. John Welley first went out upon his Mission. The Spirit overcame all refiftance, broke down all the ftrongholds of Sin, and, what Mr. Welley was much more fet against, of IN-SENSIBILITY .-- " So many living "Witnesses (fays he) hath God " given, that bis band is STILL stretched out to beal, and that figns and wonders are even NOW

" wrought by his boly Child, Jesus

" +." For, out of the mouths of babes and fucklings, is once again, as of old, perfected praise; the young men faw wifions, and the old men dreamed dreams. The shall shing A and

" All these wonders were not worked for nothing. The Spirit of the Lord was gone out, and it did not flop till it had manifested itself in the last effort of its power, THE NEW BIRTH: But it went not out, as of old, in the fill, fmall woice, but in ftorms and tempells, in cries and extacles, in tumults and confusion; and when nature was exhausted, then grace had done its work. But he tells us, his correspondents hearing of this strange affair, enquired of him bow can thefe things be? They cautioned him not to regard visions or dreams, or to fancy people had remission of fins because of their cries on tears, &cr. To this, he tells us, he answered, "You deny that " God does now work these effects: " at least that he works them in "this manner I affirm both the " have icen very many periona " changed in a moment from the " spirit of fear, horror, despair, to the spirit of love, joy, and " peace .- What I have to fay touch-" ing visions or dreams is this! I

"knew feveral persons in whom " this great change was wrought " in a dream, or during a firong " representation to the eye of " their mind, of Christ either on " the Cross or in glory 1." woxe and

But here unhappily, as is usual in these matters, the symptoms of Grace and of Perdition were fo interwoven

of the july 10 total

Journ. from Nov. 1, 1739. to Sept. 3, 1741. p 37. Aug. 12. 1738. to Nov. 1, 1739. I Ibid. p. 48, 49. resoft

and confounded with one another, that our Apolite himfelf is some-times at a loss to diffinguish the hand; and to determine, with cortainty, who had the largest share in the Work, God or the Devil; infomuch that a Manichean might have greatly availed himself of this untoward circumitance. Mr. J. Welley had been grieved, and the Spirit of God had been grieved likewise, at the scandal given by some of his own slock who "blasphemed the work, and imputed it either to Nature or the force of Imagination and Animal fpirits, or even to the delunon of the Devil ." Many (fays he) were deeply continued; but none were delivered from that painful conviction. The Children came to the BIRTH, but there was not frength to universe forth, I fear we have grieved the Spirit of the " jealous God by questioning his work †." Yet these pangs of the NEW BIRTH becoming, on certain occasions, more violent, and more general than ordinary, and even bus, the Apolle himfelf was flaggered, and feemed ready to recant. These symptoms I can no more si sampute to any natural cause than to the Spirit of God. I make to se no doubt it was SATAN tearing them as they were coming to Christ. And hence proceeded those grievous cries, whereby he might defign both to diferedit the work of God, and to affright a a fearful people from hearing that " word whereby their Souls might be faved 1." But fince these Symptoms were universal and in-

feparable from the new birth, I ta. ther think, and I will venture to fay, as it is only railing the Catachrens one step higher, that the Devil was here only in the office of Man-Midwife to the new birth And Mr. Welley himfelf, on fecond thoughts, feems not much averic to this con. ceit, as appears from the following relation .-- " I vifited (fin's he) a poor old woman a mile or two " from the Town. Her trials had " been uncommon; mexpressible " agonies of mind joined with all forts of bodily pain, not (it feemed) from any natural cause, but the direct operation of Satan: Her joys were now as uncommon; the had little time to fleep, having for feveral months last past feen, as it were, the unclouded face of God, and praised him day and night &."

little more extended, but is full far fhort of the compais of the subject; and contains only discussions on some of the beauties of diction and fentiment. So far as the author goes, his work has great merit, and Is by no means inferior to the beauties of painting, which has been fo well received by the public. In this work we fee the fame critical discernment and elegance of tafte; the fame fmooth, ornamented, pleafing file. The author has the fame fault also in this as in his former work; that of writing dialogue without even an attempt at diverfity of character, and with very little of the dramatic spirit. For a specimen of his first dialogue take the following : shull vino

The fole aim of verification is harmony. To understand this properle, we must divide it into two kinds. The first confifts in a general flow of verfe, most pleasing to the ear, bur independent on the ferife: the fecond, in bringing the found or measure of the verse to correspond with, and accompany the idea. The former may be called a verbal harmony : the latter a fentimental. If we confider the flow of verse merely as music, it will then be allowed, that variety is no left necessary than sweetness; and that a continued repetition of the same movements, must be as tirefome in poetry, as it would be in music. On examina wonder a bale degener

Mari

ing Mr. Pope's verses, we shall find, that in eighteen out of twenty, the pauses rest on the fourth and last, or the fifth and last syllables: and that, almost without exception, the period is divided into two equal lines, and, as it were, link'd by the rhyme into a coupler.

Lives thro' all life, || extends thro' all extent,

Spread undivided, poperates un-

Essay on Man.

Every ear must feel the ill essect of the † monotony in these lines; the cause of it is obvious; this verse consists of ten syllables, or sive seet: when the pause falls on the fourth syllable, we shall find, that we pronounce the six last in the same time that we do the four first; so that the couplet is not only divided into two equal sines, but each line, with respect to time, is divided into two equal parts—

και ες ι λεξις πρατιση πασων, η τις αν εχοι πλεισάς αναπαυκαι τε εξ μεθαδολας αρμονίας — ρυθμοι τε αλλοίε αλλοί, κ' τασεις φωνης αι καλεμεναι προσφδιαι διαφοροί, κλεπίσσαι τη ποικίλια τον πορον. Dion. Hal. de Struct. Orat.

Warms in the fun, refreshes in the

Glows in the flars, and bloffoms in the trees.

Or else the paule falls on the fifth fyllable, and then the line is divided with a mechanic exactness.

t

18

r

N

5

Spreads undivided, | operates un-

fpent.

Hor. Mr. Pope, in a letter to Mr. Walsh, speaking of the English verse, says, there is natural-'ly a paufe at the fourth, fifth, or fixth fyllable. It is upon these the ear reits, and upon the judicious change and management of which depends the variety of ver-'fification.' Of this he gives the following examples:

At the fifth.

Where e'er thy navy | spreads her canvals wings,

At the fourth.

Homage to thee, | and peace to all fhe brings. Every car much

At the fixth.

Like tracts of leverets, | in the

morning fnow.

Eug. In this place, Mr. Pope takes no notice of the second pause, which always rests on the last word of each line, and is firongly marked by the rhyme. But, it is on the balance between the two paules, that the monotony of the verse depends. Now, this balance is governed by the equal division of the line in point of time. Thus, if you repeat the two first examples given, you will find no difference, as to the time, whether the pause falls on the fourth or fifth fyllable; and this, I think, will extend even to the last example: or, if there should be any difference, it is so trilling, that it will generally escape

the ear. But this is not fo in blank . verse; for, the lines being made often to run one into the other, the fecond paule is funk sthe balance, from the equal division of each line, is removed; and by changing the pauses at pleasure, an open is given to an unlimited variety on ve al

Sing, heavenly Muse. sarrouted ada

In thefe, and the lines which immediately follow, the paules are shifted thro' all the ten syllables, or

Hor. But this variety is not infeparable from the nature of blank verse. In Addison's Cato, there is, I think, the very same monotony which you have condemned in Mr. Pope: Thus, as die baouletto

The dawn is overcast, the morning low'rs, norman ladrou a be

That courts the yoke, and bows the neck to Cæfar?

Pent up in Utica, | he vainly forms A poor epitome of Roman greatnefs. " quy was .. berrger the

This is the very echo of the couplet meafure.

Eug. Nothing could be more to my purpole; it confirms all that I have advanced; and proves further, that the monotony of the couplet does not proceed, as has been imagined, from the repetition of the rhymes, but from a fameness in the movement of the verse. No doubt, the use of rhymes was the first cause of confining poetic harmony to fuch narrow limits.". Mr. Addison, accustomed to the serve monotony of the couplet, had neither the genius to bear him thro's nor courage to attempt the enbounded variety of the Miltonic measures. Birds of a weak flight move always in a line; but, the Eagle, wonderful in his foarings, thews in his very floops the power sof his wing. mA poet, of a superior mefpirit, must have resources in the brariety of his numbers. The flight of Saran, in Paradife Loft, is not sieto be pent up in a couplet.

which give such a pleasant variety, and have so powerful an effect in mufre.

Eug. Of this we have a fine example in the following passage: in which you'll observe, that the Poet fets out with almost a profeic weakness of verse; thence rising gradually, like the swell of an organ, he foars into the highest dig. nity of found.

Th' infernal Serpent ; he it was, whole guile,

Stir'd up with envy and revenge, deceiv'd

The mother of mankind, what time his pride

" Eug. The distinctive property of Genius is to furprife, either by original Beauty, or Greatness in These are the master the idea. fprings; but there are others which are subordinate: for a superior genius will fo drels the most common thought, or familiar image, as to give it some unexpected advantage; by which it becomes apparently, if not really, original: the refult is the fame; we are furprized; every fuch effect implies a degree of novelty, and, confequently, of invention.

Hor. Is not surprise rather the effect of wit than of genius?

To determine this, must state the difference between them. This scems to me to depend on the degrees of our penetration, and the nature of our feelings. The man of withas a limited view into the relations of ideas; and from those which he does see, his feelings direct him to choose the most fingular, not the most beautiful. He works upon us by surprise merely; but the man of genius farprifes by an excess of beauty.

Hor. It should feem to follow from hence, that the genius may be a wit when he pleates; yet we have feen fuch, who have made the attempt without success.

Eug. Very rarely, when they give into the practice of being playful: thus, who has more wit than Shakespear? If others have failed, it must have been from the influence of a better habit: accustomed to unite ideas by their beauties, they overlook the little points of similitude in those which are the most opposed; or, of difference, in those which are the most united : hence, as Cunning is but a fhort-fighted Wisdom, Wit may be called the thort-fight of Genius.

Hor. You make a greater difterence between them than will be

allowed by many? 1 and mi awall

Eug. I wie them in that fenfe. in which they are understood, when we fay, that Ovid had wit, sand Virgil genius: that this is the most exact and received fente of thefe words, will appear from hence, that, were I to affert, that Virgil had more wit than Ovid; I should be laughed at : yet this would be the confequence of anderstanding Wit in too inlarged a fenfe, or of making it equivalent to Genius.

Ah. I have been often ill fatisfied with myfelf, for not readily entering into fach thoughts, as I have known were generally effeemed witty. You have, I thank you, Eugenio, lessened the number of my mortifications. I'must own, I have

thing dog watent to

In the Essay on Criticism, it is said-True Wit is Nature to advantage drefs'd. But immediately after this, the Poet adds-

For works may have more wit than does 'em good. Now, let us substitute the definition in the place of the thing, and it will stand thus. A work may have more of Nature drefs'd to advantage than will do it good. This is impossible; and it is evident, that the confusion arises from the Poet's having annexed two different ideas to the same wordalways

always preferred Humous to Wit, perhaps it was, that I more eafily understood it. I should call upon you for a better explanation of this matter, were I not more intent on another, You remember, that, discoursing the other day, on a passage in the Inquiry into the Beauties of Painting, in which, the fuperiority of Poetry is rather hinted at than explained, you promised me that you would enlarge this part of the subject, and-

Eug. I understand you, Aspafia; and fhould be glad, in this, an in every thing olie, to prevent your wishes.

I observed just now, that the diffinctive property of Genius is to furprise, either by original Beauty, or Greatness, in the idea.

The principal beauties in Poetry, fpring from the fource or elegance of its images; of thefe, we will first examine such as are peculiar to Poetry; after which, we will pals to those which are in common to Poetry and Painting. Of the former class, are all images founded on comparisons, either direct, or implied, The merit of these consists in a striking similitude between two objects, which, to common observation, have no apparent or necessary connexion: hence we may judge of the merit of a comparison, by the degree of our furprile, which arises from a combined admiration of its justness, its novelty, and beauty. A comparison is direct in the following inflance---

- On her left breaft A mole cinque-spotted, like the crimfon drops

I' th' bottom of a cowflip-

may no ft svill I solbe Combeline.

An implied comparison, or, in the language of the Critics, a metaphor, confids in conveying an idea intirely by the substitution of an image: this will be best understood by an example. -

Angelo, in Measure for Meafure, observing, that his guilty pasfron for Isabella, was inflamed by his knowledge of her innocence, is shocked at the wickedness of his nature; which he aggravates by the force of a metaphor.

That modefly may more betray our fense

Than woman's lightness! "having waste ground enough,

" Shall we defire to rafe the Sanctnary, grown al

"And pitch our evils there? Oh fie, fie, fie."

Sometimes a Poet has the happiness to blend these two kinds of beauty in the same image: he sets out with illustrating his object by a direct comparison; and continues to support it by a metaphor. This is a high degree of beauty; for, it can only happen, when the comparison is so exquisitely just, that the qualities effential to the borrowed object, are, with the utmost propriety, transferred to the origi-nal one. Thus Bellarius, describing to his pupils the ruins of his fortunes at court.

Cymbeline lov'd me, And when a foldier was the theme, my name

Was not far off: then was I as a

Whose boughs did bend with fruit. But in one night,

A storm, or robbery, call it what to you will, road eds at spun as you tominguing and Shook

equaliced e legance and propriety

Shook down my mellow hangings,

And left me bare to weather.

to nouspide a Cymbeline:

Of this species of beauty, the following is, perhaps, a still more elegant example.

But let concealment, like a worm i'

Feed on her damafk cheek.

Twelfth Night.

Shakespear's images are not mere addresses to the fancy; they do not play about the surface of an object; they carry us into its essence.—As, where the mother of Hamlet endeavours to excuse his extravagance.

And thus a while the fit will work on him:

Anon, as patient as the female dove, Ere that her golden couplets are

His filence will fit drooping.

Had the Poet commanded at one view the whole circle of Nature, he could not have selected such another contrast to madness. It is the most perfect image of a patient, innocent, and model selence, that ever sprung from human invention. It is by the frequency and degree of these beauties, principally, that an original Genius is distinguished. Metaphers are to him, what the Eagle was to Jupiter, or the Doves to Venus, symbols of Divinity; the sure indications of Majesty and Beauty.

Hor. It has been a matter of wonder to many, that an imagination, at times, so wild and ungovernable as that of Shakespear, should, in the finer imitations of nature, be distinguished by an unequalled elegance and propriety. Bag. If we consider the nature and progress of the imagination, we need not wonder, that superior spirits should be the most subject to these excesses. The extremities of poetic boldness, like those of personal courage, will often have a tincture of extravagance. But, this will not be the ease in men of subordinate talents; trusting more to imitation than their own feelings, they move in one even tenor; with them, judgment is but an observance of rules; a security to their weakness.

And often, to their comfort shall they find

The sharded Beetle in a fafer hold. Than is the full-wing'd Eagle.---

by original beauty;

Camb.

The last species of beauty in comparative imagery, which I shall speak of here, confifts in reducing a metaphor to a point. When the picture is given us in a fingle word, to make out which, in our own imagination, we must go through a fuccession of ideas, then are we furprised in the most agreeable manner, and the beauty, of course, is confinmmate. You fhall have Aspasia, an example of this from your favourite author, Fletcher. Amintor, in order to conceal the cause of his grief, had put on a show of mirth; Melantius, his friend, who wanted to extort the fecret from him, was not to be fo o constitue beardesor imposed on.

Causes to cozen the whole world withall,

And yourself too; but 'tis not like a friend, and a price A

To hide your foul from me; 'tis

To be thus idle; I have feen you fland

As you were bluffed midit of all

It is by the force or elegance of its allufions and images, that a poetic diction is diffinguished from simple verification. The Mules, according to Johnson, have their anvil, and a verse may be laboured into precision and harmony; but, the falles of the imagination are prompe and decisive; they spring at once into being, and are beauties at their first conception. Thus, in the language of a Poet, the sin is the eye of heaven; the heaven meld—a starry parameter; a canopy fretted with golden fire.

Does the mind exult in its follest

It is as broad, as general as the

What are the repeated calamities and Tof light the Charles the fifth of hat

The flings and arross of outrage

The properties of fleep?

Balarof bart minden this survives

Are our tender years exposed to the infection of vice?—the canker galls the infants of the firing. Is the night invoked to countenance deeds of horror and cruelty?

And pall thee in the dunner fmonk of hell.

Hor. How milerably naked of these beauties are the works of our ordinary songsters? Their metaphors are like seatter'd trees in a desert, starved and solitary: in Shakespear, they are vigorous, luxuriant, thickly spread over every part of his poetry.

Eng. This comparison will hold, with respect to images in general: as to these, which we have been

Anecdotes of Painting in England;
with fome account of the principal
Artists; and incidental Notes on
other Arts; tollested by the late
Mr. George Vertue; and now digested and published from his original MSS. by Mr. Horace Walpole.
In two Vol. Quarto.

A NECDOTES of Painting in England, is a cicle, which perhaps, of all others, is the most apt to excite ones curioufity, not that there is any thing very promifing in the subject. The reverseis rather true; but we are impatient to find out, what it is that can occupy two quarto volumes upon an art, which has hitherto made so little progress in Bogland. The reader will be surprised to find to very entertaining a work arife from fuch unpromiting materials." The first of the authors, Mr. Vertue, has been deficient in no pains to collect, and the other, Mr. Walpole, is deficient in no talent to enliven every thing, which could possibly tend to the illustration of this agreeable art, fol far as it was cultivated, either by natives or toreigners in this kingdom, This knowledge is not contemptible. Whatever concerns the arts, is of value to those who love them; that is, to every liberal and ingenuous mind. This subject takes up the work from the earliest times, to which

which it can be traced in our records, that is, from the reign of Henry IH. and carries it down to the end of the reign of Charles I. and throughout abounds with curious flories not only of the painters, but of feveral of the eminent persons, who have been the subject of their pencil. It contains also several frokes of criticism, which shew how far this author is capable of having gone, had he chofen a fubject which would have given a greater scope to his critical abilities. His file is lively, peculiar, and marked; very fententious and pointed; more correct, and rather less charged with witticisms than that of the Royal and Noble Authors. With regard to Mr. Vertue, his merits in his profession are already sufficiently known to all connoissours. His merits, as a compiler, are as great as could be displayed in that fort of employments Even in that employment virtues may be displayed and talents exercised. What Mr. Walpole fays of him in that respect, forms a very beautiful enlogy.

One fatisfaction the reader will have, in the integrity of Mr. Vertue; it exceeded his industry, which is faying much. No man living, lo bigoted to a vocation, was ever fo incapable of falshood. He did not deal even in hypothesis, scarce in conjecture. He vifited, and revifited every picture, every monument, that was an object of his refearches; and being to little a flave to his own imagination, he was cautious of trusting to that of others. In his memorandoms he always put a quere against whatever was told him of suprcious aspect; and never gave credit to if till he received the fullest fatisfaction. Thus whatever

the comfort of knowing that the greatest part at least are of most genuine authority." Preface, p. 8.

Any analysis of a work of this kind would be impracticable. What follows in the preface is a specimen of the manner of this spirited writer.

" If the observation of a dearth of great names in this lift should excite emulation, and tend to produce abler mafters, Mr. Verme, I believe and I should be glad to have the continuation of the work do greater honour to our country. It would be difficult perhaps to assign a phyfical reason, why a nation that produced Shakespear, should owe its glory in another walk of genius so Holbein and Vandyck. It cannot be imputed to want of protection: Who countenanced the arts more than Charles the First? That Prince, who is centured for his want of take in pensioning Quarles, is celebrated by the same pen for emplaying Bernini --- but want of protection is the apology for want of genius: Milton and Fontaine did not write in the balk of courtfavour. A poet or a painter may want an equipage or a villa, by wanting protection: They can always afford to buy ink and paper, colours and pencils. Mr. Hogarth has received no honours, but univerfal admiration.

But whatever has been the complaint formerly, we have ground to hope that a new zera is receiving its date. Genius is countenanced, and emulation will follow: Nor is it a bad indication of the flourishing state of a country, that it daily makes improvements in arts and sciences. They may be attended by luxury, but they certainly are wifes the reader finds, he will have produced by wealth, and happiness.

The conveniences, the decorations of life are not studied in Siberia, or under a Nero. If fevere morality would at any time expect to establish a thorough reformation, I fear it muft chuse inhospitable climates, and abolifh all latitude from the laws. A corporation of merchants would never have kept their oaths to Lycurgus of observing his flatutes 'till he returned. A good government, that indulges its subjects in the exercise of their own thoughts, will fee a thousand inventions fpringing up, refinements will follow, and much pleasure and fatisfaction will be produced at least before that excess arrives, which is so justly faid to be the forerunner of ruin. But all this is in the common course of things, which tend to perfection, and then degenerate. He would be a very abourd legislator, who should pretend to fet bounds to his country's welfare, left it should perish by knowing no bounds. Poverty will flint itself; riches will be left to their own discretion; they depend upon trade, and to circumfcribe trade is to annihilate it. It is not rigid nor Roman to fay it, but a people had better be unhappy by their own fault, than by that of their government. A Cenfor morum is not a much greater bleffing than an Arbiter elegantiarum. The world, I-believe, is not at all agreed that the austerities of the Presbyterians were preferable to the licentiousness under Charles II. I pretend to defend the one no more than the other; but I am fure that in the body politic, fymptoms that prognoficate all, may indicate well. All I meaned to fay was, that the disposition to improvements in this country is the consequence of its vigour. The establishment of a

fociety for the encouragement of arts will produce great benefits before they are perverted to mischiefs, The bounties bestowed by that fo. ciety, for facilitating the necessaries of life to the poor, for encouraging the use of our own drugs and mate. rials, or for naturalizing those of other countries, are bestowed on noble principles and with patriot views. That fociety does not neglect even the elegancies of life: Arts that are innocent in themselves, and beneficial to the country, either by adding value to our productions, or by drawing riches as they invite strangers to visit us, are worthy the attention of good citizens; and in all those lights that fociety acts upon a national and extensive plan.

The art, that is chiefly the fubject of these pages, is one of the least likely to be perverted: Painting has feldom been employed to any bad purpose. Pictures are but the scenery of devotion. I question if Raphael himself could ever have made one convert, though he had exhausted all the expression of his eloquent pencil on a feries of popish doctrines and miracles. Pictures cannot adapt themselves to the meanest capacities, as unhappily the tongue can. Nonfense may make an apprentice a catholic or a methodift; but the apprentice would fee that a very bad picture of St. Francis was not like truth; and a very good picture would be above his feeling. Pictures may serve as helps to religion; but are only an appendix to idolatry; for the people must be taught to believe in falle gods and in the power of faints, before they will learn to worship their images. I do not doubt but if some of the first reformers had been

at liberty to fay exactly what they thought, and no more than they thought, they would have permitted one of the most ingenious arts implanted in the heart of man by the Supreme Being to be employed towards his praise. But Calvin by his tenure, as head of a fect, was obliged to go all lengths, vulgar will not lift but for total contradictions: They are not ftruck, by feeing religion shaded only a little darker or a little lighter. It was at Constantinople alone where the very shopkeepers had subtlety enough to fight for a letter more or less in a Greek adjective * that expressed an abstract idea. Happily at this time there is fo total an extinction of all party-animolity both in religion and politics, that men are at liberty to propose whatever may be useful to their country, without its being imputed to them as a time, and to invent what they mean should give pleasure without danger displeasing by the very attempt."

His reflections on the history of Architecture in England are ex-

tremely curious.

" Vertue and several other curious persons have taken great pains to enlighten the obscure ages of that science; they find no names of architects, nay little more, than what they might have known without inquiring; that our ancestors had Indeed Tom Hearne, buildings. Brown Willis, and fuch illustrators did sometimes go upon more positive ground: They did now and then ltimble upon an arch, a tower, nay a whole church, fo dark, fo ugly, fo

uncouth, that they were fure it could not have been built fince any idea of grace had been transported into the island. Yet with this incontestible security on their side, they still had room for doubting; Danes, Saxons, Normans, were all ignorant enough to have claims to peculiar ugliness in their fashions. It was difficult to ascertain the periods when one ungracious form jostled out another: and this perplexity at last led them into such refinement, that the term Gothic Architecture, inflicted as a reproach on our ancient buildings in general by our ancestors who revived the Grecian tafte, is now confidered but as a species of modern elegance, by those who wish to distinguish the Saxon This Saxon style bestyle from it. gins to be defined by flat and round arches, by some undulating zigzags on certain old fabrics, and by a very few other characteristics, all evidences of barbarous and ignorant times. I do not mean to fay fimply that the round arch is a proof of ignorance; but being so natural, it is fimply, when unaccompanied by any graceful ornaments, a mark of a rude age --- if attended by mishapen and heavy decorations, a cer-The pointed arch, tain mark of it. that peculiar of Gothic architecture, was certainly intended as an improvement on the circular, and the men who had not the happinels of lighting on the fimplicity and proportion of the Greek orders, were however so lucky as to strike out a thousand graces and effects, which rendered their buildings magnificent,

VOL. V.

In the decline of the empire there were two feets who proceeded to the greatest violences against each other in the dispute whether the nature of the second person was Ouosoros, co-effentialis; or ouoriogios, similis effentia.

yet genteel, vaft, yet light, venerable and picturefque. It is difficult for the noblest Grecian temple to convey half fo many impressions to the mind, as a cathedral does of the beft Gothic tafte proof of skill in the architects and of address in the priests who creeded them. The latter exhausted their knowledge of where to place the first stone, he the passions in composing edifices would engage to build such another. whose pomp, mechanism, vaults, That there is great grace in several -tombs, painted windows, gloom and places even in their clusters of flenperspectives infused such sensations der pillars, and in the application of of romantic devotion; and they their ornaments, though the prinwere happy in finding artifts capable ciples of the latter are to confined of executing fuch machinery. One that they may almost all be reduced must have take to be sensible of the to the trefoil, extended and varied, beauties of Grecian architecture; I shall not appeal to the editices one only wants passions to feel themselves -- It is sufficient to ob-Gothic, In St. Peter's one is con- ferve, that Inigo Jones, Sir Christovioced that it was built by great pher Wren and Kent, who certainly princes -- In Westminster abbey, understood beauty, blundered finto one thinks not of the builder; the the heaviest and clumbest composireligion of the place makes the first tions whenever they aimed at imitaimpression --- and though stripped of tions of the Gothic--- Is an art defits alters and fhrines, it is nearer picable in which a great malter converting one to popery than all cannot thine? the regular pageantry of Roman Confidering how ferupulously our domes. Gothic churches infuse su- architects confine themselves to anpertition; Grecian, admiration. tique precedent, perhaps some devi-The papal see amassed its wealth by ations into Gothic may a little re-Gothic cathedrals, and displays it in lieve them from that servile imita-Grecian temples.

I certainly do not mean by this fludy both taftes, not blend them: little contrast to make any compari-You between the rational beauties of regular architecture, and the unrestrained licentiquiness of that which is called Gothic. Yet I am clear that the perfons who executed the latter, had much more knowledge of their art, more tafte, more genius, and more propriety than we chuse were all that remained of old Rome,

hardines in the execution of fome of their works which would not have fuftained themselves if dictated by mere caprice. There is a tradition that Sir Christopher Wren went once a year to furvey the roof of the chapel of King's college, and faid that if any man would thew him

⁺ In Lincoln's Inn chapel, the sceple of the church at Warwick, the King's besch in Wettmintter-hall, &c.

do not doubt but our churches would resemble the private houses of Roman citizens. Our buildings must be as Vitruvian, as writings in the days of Erasmus were obliged to be Ciceronian. Yet confined as our architects are to few models, they are far from having made all the use they might of those they possess. There are variations enough to be ftruck out to furnish new scenes of fingular beauty. The application of loggias, arcades, terraffes and flights of theps, at different flages of a building, particularly in fuch fituations as Whitehall to the river, would have a magnificent effect. It is true, our climate and the expence of building in Bngland are great redrictions on imagination; but when architecture is capable, one must such and such an edifice, I am perthe principal objects; one speaks of as well as fornished the necessary come to the historic part, which will this distance of time pretend to lie in a small compass.
